

PHIL BREDESEN
GOVERNOR

TENNESSEE
DEPARTMENT OF SAFETY
1150 FOSTER AVENUE
NASHVILLE 37249-1000

FRED PHILLIPS
COMMISSIONER

Dear Tennessean:

The tragic news is that more than 1,100 people die each year in accidents on Tennessee roads and highways. The better news is that it doesn't have to be that way.

That's the main reason we have published this manual for you. It could save your life...and the lives of those citizens who travel our highways with you. After all, your safe and responsible driving is the most effective tool we have in saving lives.

So we encourage you to read and study this manual. It covers the laws that affect you as a driver and also provides important driving tips. We've tried to present the material in an easy-to-understand fashion.

So read up and then use what you've learned to travel the great state of Tennessee. Don't forget to buckle up...and help us save lives.

Phil Bredeesen
Governor

Fred Phillips
Commissioner of Safety

Driver License Issuance

MISSION

- ***To provide state of the art, quality services in a professional and efficient manner***
- ***To promote safe, knowledgeable and competent drivers in the Great State of Tennessee***

VISION

- ***The Driver License Issuance Division, through technology, customer service, commitment and teamwork, is leading the way in meeting the needs of the citizens of Tennessee.***
- ***We are continually at the forefront in seeking innovative ways to ensure our citizens receive the highest quality professionalism through state of the art technology.***
- ***We are dedicated to providing efficient, courteous service to our customers by being reliable and trustworthy in all aspects of serving the public trust.***
- ***We are committed to qualifying safe and knowledgeable drivers while providing expanding services to meet the changing needs of the public.***
- ***We are internationally certified professionals empowered through teamwork and pride in public services.***
- ***Driver License employees are proud to be first in the nation to take their services into a brave new world. We continue our proactive leadership that other states emulate. This makes us rise above all.***

The Department of Safety has been internationally accredited since 1999.

The Driver License Division is a very diversified division offering varied services for the citizens of Tennessee. While the primary focus remains issuing driver licenses to qualified applicants, services have broadened to include many additional customer conveniences including:

- Offering voter registration applications
- Over-the-counter issuance of MVR's (driving records)
- Processing of Handgun Carry Permit applications and fingerprinting
- Financial Responsibility reinstatements at selected field offices
- Financial Responsibility reinstatement advice letters

During the 2001-2002 Fiscal Year, the division issued 1,419,733 driver licenses/photo ID's

The Division's Internet Renewal Program served a total of 39,292 Tennessee citizens who renewed their driver license 'on-line' instead of standing in line at a station.

FOREWORD

The purpose of this handbook is to give you a general understanding of the safe and lawful operation of a motor vehicle. Alone it will not teach you how to drive. Mastering these skills can only be achieved with a good instructor and plenty of practice. The handbook will inform you of many things you can do to have a safe and enjoyable experience on Tennessee's highways.

Also included in this handbook is important information you must know to pass the Driver License knowledge tests. This book does not cover all Tennessee traffic laws and may not include the most recent changes in state driver licensing law.

Every effort has been made to have all information included in this manual up-to-date and current as of the date shown in the promulgation statement.

Misprints or out-dated procedures that may appear within these pages will not over-ride newer law, rules, regulations or policy that may have been implemented since the printing date.

ACKNOWLEDGEMENTS

We would like to thank the following organizations and agencies for their contributions and assistance to the development and gathering of the information provided in this manual:

P <ul style="list-style-type: none"> Issued as an instructional permit for a Class A, B, C, D, and M license PD = "Learner Permit"	SPECIAL RESTRICTIONS APPLY DEPENDING UPON THE PARTICULAR CLASS	

This chapter explains who needs a Tennessee driver license, as well as how to decide which class of license you need and whether or not you qualify. It also covers ID-Only licenses.

Who Needs a Tennessee Driver License?

If you live in Tennessee and want to drive a motor vehicle, you must have a valid Tennessee driver license.

Anyone who moves to Tennessee and has a valid driver license from another state or country must apply for a Tennessee driver license if they:

- live in the state longer than 30 days
- have taken employment, or
- would otherwise qualify as a registered voter.

What Class of License Do You Need?

In Tennessee, driver licenses are issued specifically for the class and type of vehicle you operate. Therefore, the class of license you should have depends specifically upon the type of vehicle you operate and for what purpose you use your vehicle.

The chart on the facing page and the discussion which follows should help you determine which class of driver license you need, as well as whether or not you need any special endorsements.

Class D Licenses

Generally speaking, the majority of applicants for a Tennessee driver license will be operators of regular passenger vehicles, pick-up trucks, or vans. This handbook is designed to provide the information you need to get a Class D license.

A Class D vehicle is defined as any vehicle, or any combination of vehicles, with a gross vehicle weight rating of 26,000 pounds or less, as long as:

1. The vehicle is not used for the purpose of transporting hazardous materials which are required by law to be placarded.
2. The vehicle is not used to transport more than fifteen passengers **including** the driver, or
3. The vehicle is not a school bus used to transport children to and from school.

If the vehicle is used for any of these purposes, the driver is required to obtain a Commercial Driver License.

To qualify for a Class D license, you must be at least sixteen (16) years of age, and must pass a vision test, knowledge test, and driving test. If you are under age 18, you must also meet special qualifications described in the next chapter.

Class D With F (For-Hire Endorsement)

If a person's main job is to drive or transport people in a

Class D vehicle, a For Hire endorsement must be added to the Class D license. This endorsement replaces what formerly was called a "chauffeur" or "special chauffeur" license.

The Class D license with a For Hire endorsement (Class D with F) serves as a bridge between the regular driver license required for private transportation and the commercial license required for tractor-trailers, large trucks, buses and the like. Examples of people whose job requires them to have the For Hire endorsement include:

- Taxi, shuttle service drivers
- Couriers, delivery services (flowers, pizza, etc.)
- Ambulance drivers

People hired for some purpose other than driving who drive in the course of doing their job, generally do not need this endorsement. For example, plumbers, meter readers and engineers do not need the For Hire endorsement. Volunteers driving Class D vehicles also do not need this endorsement.

NOTE: Although you may not be required by law to have the For Hire endorsement your employer may require you to obtain this endorsement for insurance or safety requirements.

To add the For Hire endorsement, drivers must meet the eligibility requirements, pass the appropriate tests, and pay a fee of \$4.50. Applicants are eligible to apply for this endorsement if:

- They are at least eighteen years old,
- No challenge exists concerning their good character, competency and fitness to be so employed, and
- They will be operating a Class D vehicle.

TESTS REQUIRED — Applicants must pass a vision test, and a knowledge test designed specifically for the For-Hire Endorsement. To prepare for the knowledge test, you should carefully study this entire driver handbook.

Class M (Motorcycle)

The operator of a motorcycle, motor-driven cycle, or motorized bicycle will need to apply for a Class M license. These two and three-wheeled vehicles are categorized by cylinder capacity and other design features. Generally, if the vehicle is over 125 cubic centimeters, a Class M license is issued; under 125cc, a Class M limited license is issued.

Class M licenses may be issued as a single license, or along with another primary class. For example, if a driver wishes to be able to operate both a motorcycle and a Class D vehicle, he or she should apply for a Class DM license.

Applicants wishing to apply for a Class M license should obtain and read the Motorcycle Operator Manual in addition to this manual. "Off-road" motor vehicles are not allowed to be used for the road test.

Class A, B, or C (Commercial)

Operators of larger and more complex vehicles will need to apply for a Commercial Driver License (CDL). These licenses include Class A, B, and C depending upon the Gross Vehicle Weight Rating (GVWR), Gross Combination Weight Rating (GCWR), and what is being transported.

In general, state law defines a commercial motor vehicle (CMV) as any vehicle or combination of vehicles weighing more than 26,000 pounds. If hazardous materials are transported, or if the vehicle is designed to transport more than fifteen (15) passengers including the driver, or if the vehicle is used as a school bus, a CDL would also be required, regardless of the weight of the vehicle.

Drivers who need a CDL should obtain the Commercial Driver License Manual which contains detailed information necessary to prepare for the tests. These manuals are available at all driver license stations.

NOTE: If a person holds a valid commercial driver license (Class A, B, or C license), this license is also valid for operating a Class D vehicle. No separate Class D license is required. A Class M license would be needed, however, if a commercial driver also wanted to operate a motorcycle.

Learner Permit (Class PD)

Instructional permits are issued in conjunction with another class of license, indicating the class of vehicle which the operator is legally entitled to drive. For example, the Class PD license allows drivers to learn how to drive Class D vehicles.

To obtain a Class PD license, you must have reached your fifteenth birthday and pass the written and vision tests. You will be permitted to operate an automobile only when accompanied by a licensed driver who is at least 21 years old and who must occupy the seat beside the driver.

To exchange your Class PD license for a Class D license, you are required to take a driving test and another vision test.

If you are less than 18 years old, you must have held a valid Class PD for 180 days and abide by all the requirements of the Graduated Driver License law as outlined in the next chapter.

No matter how old you are, we suggest that you take adequate time to practice your driving skills and return only when you have mastered these skills. You will not need to repeat your knowledge test unless you let it expire over 12 months.

Class H (Hardship)

A hardship license (Class H) may be issued to a minor who is fourteen or fifteen years old to operate passenger vehicles or motorcycles. These licenses are issued only in cases of family hardship and are limited to specific needs. Proof of hardship must be submitted with a Hardship Application (SF-0263). Each application is reviewed and evaluated on an individual basis. Less than one percent of all licenses issued to minors are hardship licenses.

Applicants who qualify to apply for a hardship license must pass a vision test, knowledge test, and road test. The Class H license is valid only for daylight hours and for travel to authorized locations as specified on an attachment.

Those with a hardship (Class H) license who are at least fifteen (15) years old are extended the same privileges as those holding a Class PD license, when they are accompanied by any of the responsible adults listed for the Class PD.

Regardless of age at time of approval, a Hardship License will expire on the applicant's 16th birthday.

NOTE: If you are approved for a Hardship License and it is less than 6 months till your 16th birthday, you will be required to renew a Class PD upon expiration of your Hardship License. You will need to hold this learner permit until you have attained a total of 180 days driving experience between the two license types and meet the GDL Requirements as outlined in the next chapter.

Identification Licenses (“ID Only”)

There are two types of identification licenses which may be obtained for identification purposes only. No testing is required, but all require the applicant to meet the same standards for proof of identity and residency as are required for any driver license. None are valid for any vehicular operation. If an applicant is under the age of eighteen (18) a responsible adult must complete a portion of the Minor/Teen-age Affidavit and Cancellation form (available at any driver license station) at the time of application.

1. The first type of ID may be issued to any person not currently holding a valid driver license who presents positive proof of identification and all other requirements detailed in the next chapter. At age sixty-five (65) or older, the ID does not expire.
2. Any applicant who does not have a social security number shall complete an affidavit, under penalty of perjury, affirming that the applicant has never been issued a SSN, and must provide either an original or certified copy of one of the following:
 - (a) Birth Certificate issued by Tennessee or another state, possession, territory or commonwealth of the USA - OR
 - (b) Documentation issued by the United States Immigration and Naturalization Service acceptable to the Department of Safety.
3. Any person who is mentally retarded or physically handicapped may obtain a “permanent identification license.” In addition to presenting positive proof of identification, they must submit a certified statement from a licensed doctor stating they are unable to operate a vehicle. Those who qualify for this ID may receive it free of charge. ID licenses issued in this manner do not expire.

As a service to Tennessee residents, families with children, including infants, may obtain these identification-only licenses for their children.

**Who Is Not Required To Have
A Driver License?**

- Any member of the armed forces while operating a motor vehicle owned or leased by any branch of the armed services of the United States, including the National Guard.
- Operators of any road machinery, farm tractor, or implement of husbandry which is temporarily operated or moved on a highway.
- Non-residents who have in their immediate possession a valid driver license issued by their home state or country, equivalent to the appropriate class or type of Tennessee license.
- Individuals who are not U.S. citizens and who, in connection with their employment in managerial or technical positions in Tennessee, may operate vehicles with a valid driver license issued by another state, country, or international body for a period of six (6) months.
- Students pursuing an approved driver training course in a public or private secondary school, or in a licensed commercial driver training school for passenger vehicles, when accompanied by a certified instructor.

Who Is Not Eligible?

- Anyone whose license is currently suspended or revoked in this, or any other state
- Anyone the Commissioner has reason to believe would not be able to operate a motor vehicle safely because of mental or physical disabilities
- Anyone who has been proven to be a habitual drunkard or who is addicted to the use of narcotics.
- Anyone required to show proof of financial responsibility who has not done so.
- Anyone under the age of eighteen who has dropped out of school before graduating, or who does not make “satisfactory progress” in school.

Driving without being licensed is a class B misdemeanor.
The penalty is a fine up to five hundred dollars (\$500) and/or six months in jail.

**PENALTY FOR DRIVING
WITHOUT A LICENSE**

While driving in Tennessee you must have your driver license in your possession to display upon demand to any law enforcement officer. If you do not have your license with you, you may be fined not less than two dollars (\$2.00) and no more than fifty dollars (\$50.00).

Other Driver License Services

Anatomical Gifts

More than 80,000 Americans, including nearly 1,600 Tennesseans, are waiting for a life-saving organ transplant. Sixteen people die each day while waiting because there is a shortage of donors. Hundreds of thousands more need a life-enhancing tissue or cornea transplant.

More than 750,000 Americans benefit from a life-enhancing tissue transplant each year another 46,500 have better vision each year as a result of corneal transplants. Your decision to become an organ and tissue donor can save or enhance someone’s life.

By signing the back of your driver’s license, you could be giving someone the ultimate gift — the Gift of Life. When you apply for a driver’s license, or renew your current one, there will

be a box for you to check which indicates your wishes to be an organ and tissue donor. You may fill out the Tennessee Organ Donor Card on the back of your license at any time.

In July, 2001, the law changed to make a signed driver's license or donor card the ultimate way to indicate a person's decision to become a donor. The law clarifies that only the person signing the driver's license can revoke this decision — no one else. It is important, however, for your family members to know your decision about donation so they can ensure your wishes are carried out.

For more information regarding organ and tissue donation, please contact the agencies (see chart below) in your area. Website: www.DCIDONOR.org

“Motor Voter”

To make it easy for citizens to apply to register to vote, the law requires us to offer you the opportunity to register to vote, or to update your voting records, when you apply for a driver license or ID. The Department does not actually process your voter registration application. Instead, we forward your information to your local election commission, if you request.

APPLYING FOR YOUR LICENSE

What Do You Need To Bring?

To reduce the potential for fraud, and to protect **you**, it is necessary for us to be able to determine that you are “who you say you are.” This is why it is necessary for you to bring us positive proof of your name and date of birth, and why we require original or certified documents, not photocopies.

If your current name is different than the one shown on these documents, you must be able to show all of the links between your name currently on file with the department and the name you currently desire to have shown, with each link supported by original, certified legal documents. We cannot accept name changes through the mail.

You can apply for your license anywhere, not just in the county where you live. For a complete list of driver license stations, see the list of stations on last two pages of this handbook.

This chapter describes what you need to do to apply for your license. For a quick overview, see the checklist at the end of this chapter.

Proof of Identify

The Driver License Examiner will require positive proof of date of birth and identification of any person applying for any class of driver license or photo identification license. The Examiner will ask for two (2) items of proof as follows:

- **ORIGINAL** applicants must have at least one item from the Primary Identification list. The second item may be from the Secondary Identification list or another item from the primary list.
- Applicants for **DUPLICATES** or **RENEWAL** of an existing Tennessee DL/ID generally must provide 2 items from either list.
- **NEW RESIDENTS** must surrender their license from the former state -OR- provide the same two (2) items of proof as required of an **ORIGINAL** applicant.
- **CHANGE OF NAME:** Applicant's will need proof (such as original certified court order, marriage certificate, divorce decree, etc.) of name changes when any of the primary or secondary documents detailed below have a name different than the applicant's current name.

Primary Identification

Acceptable primary identification includes but is not limited to original or certified documents with full name and date of birth, such as the following items:

Table: 2.1

Document	Notes
<ul style="list-style-type: none"> • U.S. photo driver license or photo ID card or license from another country 	May also include photo learner permits
<ul style="list-style-type: none"> • Original or Certified Birth Certificate 	<ul style="list-style-type: none"> - Must be original or certified copy, have a seal and be issued by an authorized government agency such as the Bureau of Vital Statistics or State Board of Health. - Hospital issued certificates and baptismal certificates are NOT acceptable. - Foreign birth certificates, not issued in English, must be translated and accompanied by a Certificate of Accurate Translation.
<ul style="list-style-type: none"> • Military Identification 	Active Duty, Retiree or Reservist military ID card Discharge papers Military Dependent ID card

Any other documentary evidence which confirms to the satisfaction of the Department the true identity and date of birth of the applicant.

Secondary Identification

Document	Notes
• Computerized Check Stubs	Must include the applicant's full name pre-printed on the stub.
• Union Membership Cards	Must include the applicant's full name
• Work IDs	Preferably with photo
• Financial Institution Documents	Computer printouts of bank statements, savings account statements, loan documents, etc.
• Social Security Documents	SS Card (original only not metal or plastic replicas), printout, benefits statements, etc.
• Health Insurance card	TennCare, Medicaid, Medicare, etc.
• IRS / state tax form	W2 Forms, Property tax receipts, etc.
• Military Records	Assignment orders, selective service cards, Leave & Earnings Statement, etc.

Proof of Tennessee Residency

The Driver License Examiner will also require positive proof of Tennessee residency for the following applicants:

- ORIGINAL applicants for a first time ID, permit or license of any class.
- NEW RESIDENT applicants for an ID, permit or license of any class.
- RETURNING RESIDENT applicants for an ID, permit or license of any class (even when the applicant may have previously held a Tennessee ID or license before moving out of state).

Items that will be considered as acceptable proof of residency shall consist of two (2) separate documents from

the lists shown in Table 2.2 as long as the documents contain the following information:

1. The applicant's name - OR -
2. The name of the applicant's spouse, if the applicant has a spouse (proof of relationship required) - OR -
3. If the applicant is a minor, the name of a parent or legal guardian (proof of relationship required)
4. The Tennessee residence address used on the application for ID, permit or license of any class.
5. Documents must be originals; no photocopies or facsimile copies can be accepted.

NOTE: Proof of relationship is generally the certified marriage or birth certificate. (long-form)

Table: 2.2

Two Documents From List A Showing residence address used on application and your name, or name of your parent, guardian or spouse	OR	One Document From List A and One Document From List B
<p style="text-align: center;">LIST A</p> <ul style="list-style-type: none"> • Current utility bill including telephone, electric, water, gas, cable, etc. (Must include postmarked envelope bill was mailed in) Initial Deposit Receipt is NOT acceptable. • Current bank statement (not checks) • Current rental/Mortgage contract or receipt including deed of sale for property • Current employer verification including paycheck / check stub, work ID or badge, etc. • Current automobile, life or health insurance policy (not wallet cards) • Current driver license or ID issued by the State of Tennessee to a parent, legal guardian or spouse of applicant (proof of relationship required) • Current Tennessee motor vehicle registration • Current Tennessee voter registration • Current IRS tax reporting W-2 Form • Receipt for personal property or real estate taxes paid within the last year • In case of student enrolled in public or private school in this state, student may provide a photo student ID and acceptable documentation that student lives on campus. 		<p style="text-align: center;">LIST B</p> <ul style="list-style-type: none"> • Individual Taxpayer Identification Number (ITIN) issued by the IRS • Form I-94 issued to the applicant by the Immigration and Naturalization Service (INS) • Employment authorization document (E.A.D.) issued to the applicant by the INS • I-551 issued to the applicant by the INS

REMEMBER — NO PHOTOCOPIES!

Social Security Numbers

Tennessee law requires the social security number for all applications where the U.S. Government has issued the applicant a social security number. The department is also required to maintain this information on each applicant's record. However, you can choose whether or not to have it printed on your license.

Tennessee has a computer link with the Social Security Administration, so most applicants will not have to present proof of the social security number. The computer will simply return a message indicating that the number matches (or not). If the social security number provided fails to match with the computer records; the Examiner will then be required to ask for proof of the number from the applicant. Some documents the Examiner can use as proof are listed below. These documents may also serve as a second piece of identification.

- Your original Social Security card
- The Internal Revenue Service W-2 Wage and Tax Statement form
- A computer generated payroll check (check stub) or bank statement
- Health insurance card with both name and Social Security number

If You Have Never Been Issued a Social Security Number

New legislation passed in May of 2001 allows applicants who have never been issued a social security number to sign a sworn affidavit to that effect. This affidavit is available at any Driver License Station and must be signed in the presence of an Examiner or Notary Public. By signing this affidavit the applicant attests, under the penalty of perjury, that no social security number has ever been issued to them by the U.S. Government. This affidavit allows the Department of Safety to process the application without the requirement of the social security number.

License Fees At A Glance

Tennessee licenses now expire every five years on the driver's birthday evenly divisible by five (age 30, 35, 40 . . . 55, 60, 65, etc.). This makes it easier for drivers to remember when it is time to renew, and means they have to renew less often than before.

To get you on the "Drive for Five" cycle, your first license may be for a shorter or longer period than five years. If so, fees will be pro-rated. Everyone pays the same fees PER YEAR for each license. The fees shown below (Table: 2.3) as "standard fees" are calculated for a 5-year license and include an application fee.

Your actual fees may vary slightly depending upon your age at the time of applying. The actual fee and number of years issued will be determined by the age you are within 6 months of (i.e. $21 + 3 \text{ months} = 21\text{st}$ birthday issue for 4 years, or $21 + 8 \text{ months} = 22\text{nd}$ birthday issue for 3 years)

Other Applicants

New Residents

People who move to Tennessee must obtain a Tennessee driver license no later than thirty days after establishing residency. After passing the required tests, they must surrender all out-of-state driver licenses. Tennessee law does not allow a resident of this state to hold more than one valid license or ID.

If the new resident presents an out-of-state driver license that has not expired, only the vision test is required, unless otherwise deemed necessary by the Examiner. However, if the license has expired over six months, all tests are required.

New residents must also provide items for proof of residency as listed at the beginning of this chapter (Table 2-2)

Military Personnel

If a person holds a valid Tennessee license and is in or enters into the United States armed forces, that license shall

Table: 2.3

CLASS	MINIMUM AGE	STANDARD FEES
D — Operators	16	\$19.50
D w/For Hire	18	\$22.00
Adding For Hire	18	\$4.50
PD — Learner Permit (over 18)	15	\$5.50 (for 1 year)
PD — Learner Permit (under 18)	15	\$10.50 (for 1 year)
H	14	\$9.00
ID Only	Under 18	\$5.00
ID Only	Over 18	\$9.50
M — Motorcycle	14	\$20.50
DM	16	\$38.00
A	21	\$46.00
B, C	21	\$41.00
Duplicate — D or M	—	\$8.00 for first, \$12.00 for subsequent
Duplicate — CDL	—	\$12.00 for first, \$16.00 for subsequent
Intermediate Restricted	16	\$24.50
Intermediate Unrestricted	17	\$2.00
"Graduating" to Class D	18	\$8.00

remain valid as long as the person remains on active duty, and is based outside this state. Members of the National Guard and family members of military personnel are not eligible for this provision.

While on active duty and stationed outside of Tennessee, the military person may have a "Code 30" placed on the license to indicate that the license does not expire. To add this code, bring a copy of your military orders to the driver license station and pay the appropriate fees.

Note, after you have been honorably discharged or separated from the military, or reassigned to a duty station back in Tennessee, you have sixty (60) days following the date of separation on the DD214 form to renew your license without any penalty or added tests.

Other Common Questions

Q: How Do I Replace a Lost License?

If your driver license or learner permit is ever lost, stolen or destroyed, you may obtain a duplicate by applying at any driver license station. You must apply in person, present two pieces of proper identification, and pay the appropriate fee. This fee may vary depending upon the number of duplicates applied for during the current renewal cycle of your license.

Q: How Do I Renew My License?

The department mails every driver a courtesy renewal notice from four to six weeks before their licenses expire. **READ YOUR RENEWAL NOTICE CAREFULLY.** There are several ways to renew a driver license, which will be explained on your notice.

- If you have a current valid photo license, you may renew by mail, or by Internet.
- If you renewed by mail on your last renewal, or have certain types of licenses, your renewal notice will direct you to go to your nearest driver license station to have a new photograph made.
- If you are 60 years old or older and choose to have a non-photo license, you may obtain this by mail. You will be sent a new non-photo license to replace your old license.

Don't Let Your License Expire. No matter how you renew, the important thing is to do so before your license expires. If you let 30 days go by after your expiration date, there will be a five-dollar late fee. After six months, the late fee doubles to \$10.00. If you let five years go by without

renewing, not only will you have to pay the \$10.00 late fee, you will also have to pass vision, knowledge, and skills test.

NOTE: These are not "grace periods." **When your license expires, you are no longer entitled to drive,** and will be subject to the same penalties as someone who has never been licensed. It is your responsibility to maintain the validity of your license.

If you do not receive your renewal notice, you may simply take your current license to any driver license station. The renewal notice itself is not necessary for you to be able to renew your license.

Q: How Do I Change My Address?

It is important to notify the department of safety! If your residence address changes (even though you may not have moved) you are required by state law to notify the Department of Safety within **ten (10) days** of this change. Sometimes addresses are changed without people actually moving. For example, if your area installs an emergency "911" system, your address may be changed with the Post Office. But simply notifying postal authorities will not provide the information to us. By failing to notify us, you could miss the renewal date of your license, or even have your driving privileges suspended or revoked unnecessarily.

The law does not require the address to be changed on your actual license, just on our files. If you want to have your record updated, write to us and give us your name (as it appears on your license), date-of-birth, Social Security number and, of course, your driver license number. You may do this by letter, by picking up a change-of-address form at any driver license station, or by internet.

If you want a new license issued that reflects this change, you may go to a driver license station, pay the appropriate fees, and have a new license issued.

When giving us your new address, remember that by law, your license must show your legal resident address: a house, and/or apartment number and the street or a route and box number. The city along with the correct zip code is also required. A post office box alone will not be accepted as a mailing address. For on-line service visit our web site at: <http://www.state.tn.us/safety>

Q: How May I Choose to Release Personal Information From My Record?

The Federal Driver Privacy Protection Act (DPPA) prohibits the dissemination or disclosure of personal information from a motor vehicle record without the "express consent" of the person to whom such information pertains.

Therefore, in order to comply with the act, as of June 1, 2000 the personal information contained in your driver license record is protected. Without your express consent, **we will not** release your personal information to people wanting a mailing list or individuals who ask for your record for an unspecified purpose.

If you want us to release your information you should visit the local Driver License Station to file your request or visit our website at <http://www.state.tn.us/safety/dl/privacy.html>

EXPERIENCE + SAFE RECORD = TENNESSEE GDL

If Under Age Eighteen

First License or Learner Permit

Tennessee began issuing a Graduated Driver License on July 1, 2001.

Purpose: To incrementally teach young drivers how to drive by guiding their progression toward full, unrestricted driving.

Focus: To increase the young driver's awareness of the responsibility entrusted to those granted the privilege of driving.

Goal: To increase this awareness through requiring minimum levels of driving experience and safe driving history (record) before allowing teenage drivers to receive a "full-fledged" Class D driver license.

Graduated Driver License

The rules for getting a driver license for those under age 18 are summarized in Table 2.4. Motor vehicle crashes are the major cause of death for young people between the ages of 15 and 20. By requiring more supervised practice, the State of Tennessee hopes to save lives and prevent tragic injuries.

Learner Permit

- You must be 15 years old and pass the standard written and visual exams.
- You must hold a learner permit for 180 days.
- You may drive a car only when accompanied by a license driver 21 years or older.
- You may not drive between the hours of 10 P.M. and 6 A.M.
- Passengers between 4-17 years of age must wear a seat belt.

Intermediate License

There are two (2) Intermediate License levels for those who are under 18 years of age. The first level is the Intermediate Restricted License and the second level is the Intermediate Unrestricted License.

First Level - Intermediate Restricted License

- You must be sixteen (16) years old and pass the driving test.
- You must have held a learner permit for 180 days.

- You cannot have more than six (6) points on your record during the immediate 180 days preceding your application.
- You must have verification from a parent, legal guardian or driving instructor stating you have fifty (50) hours (ten (10) hours at night) of driving experience.

Restrictions of the Intermediate Restricted License

1. You may not drive between 11 P.M. and 6 A.M. unless:
 - Accompanied by a parent, legal guardian or license driver 21 years or older. Your parents or legal guardian must designate this person in writing.
 - You are driving to or from work, school or school activity (you must have in your possession written permission from a parent or guardian pertaining to your activity).
 - You are driving to or from a hunting or fishing destination between 4 A.M. and 6 A.M. (you must have in your possession a valid hunting or fishing license).
2. You may not have more than one passenger in the car unless:
 - One or more passengers are 21 years of age or older
 - The passengers are siblings being driven to and from school.
3. Passengers between 4 and 17 years of age must wear a seat belt.

Second Level - Intermediate Unrestricted License

- To obtain this license you must be 17 years old.
- You must have held an Intermediate Restricted License for one (1) year.
- You cannot have accumulated more than six points on your driving record.
- You cannot have had a traffic accident that was your fault.
- You cannot have 2 seat belt violations.
- Passengers between 4 and 17 years of age must wear a seat belt.

Final Level - Regular Driver License

- You may obtain a Class D regular driver license when you are 18 years of age, or
- Upon graduating from high school or receiving a GED.

The word "Intermediate" will be removed, however, the license will still include the "Under 21" indicators.

Proof of Behind The Wheel Driving Experience

Applicants under 18 applying for the Intermediate Restricted Class D must provide certification that they have completed fifty (50) hours of supervised driving experience while holding a valid permit. This experience must include a minimum of ten (10) hours of night-time driving.

Certification of driving experience must be made on the official form (SF-1256) provided by the Department of Safety. This form is available at all DL Stations or may be

downloaded from our web site. This form must be signed by either a parent, legal guardian or licensed driving instructor.

Hardship Driver Licenses

The Graduate Driver License (GDL) law **DID NOT** affect or change the Hardship procedures in any manner.

- Hardships can still be issued at age fourteen (14) and will always expire on the driver's sixteenth (16th) birthday.
- Hardships will still automatically serve as a PD once the holder turns fifteen (15) years of age.

If the Hardship (or PD) has not been held by the driver for the minimum of 180 days by the time the Hardship expires on the sixteenth birthday the driver will have to be re-issued the learner permit. This permit will need to be carried for the remainder of time to complete the required 180 days before the issuance of an Intermediate Restricted (IR) can be allowed. The Hardship license still **CAN NOT** be renewed.

New Residents Under 18

Basically when a new resident who is under the age of 18 moves to Tennessee they must enter the GDL Program at one of the first 2 levels, either the learner permit or intermediate restricted.

- If the minor has a valid permit from the previous state then a Tennessee permit is the only thing they may be issued in Tennessee. They must hold a **Tennessee** permit for 180 days, regardless of the length of time they have carried the permit in the previous state.
- If the minor has a valid license (regular, provisional, probationary, graduated, etc.) from the previous state that has been issued for 90 days or more they may apply for an Intermediate Restricted license only. They must hold a **Tennessee** intermediate restricted level license for one full year before qualifying for the second level, intermediate unrestricted regardless of the length of time

they have carried the license in the previous state.

- If the license from the prior state has not been issued for at least 90 days the minor will be required to start out in Tennessee at the learner permit level.
- If the minor has graduated from high school or received their GED prior to turning 18 they may apply for the regular Class D operator's license as described previously.

Features of The GDL Photo License

(See page 18 - examples) All GDL levels will have the photo on the right side of the license and a yellow header bar.

Some of the features of the licenses issued to minors under GDL include:

- **Learner Permits** will have a red color coded Tennessee state imprint indicating GDL in the lower left corner.
 - A minor who is issued a learner permit will be given a **"restriction card"** to carry along with the permit that explains the restrictions and requirements to advance to the first level of the Class D license under the GDL Program. An example is shown on page 18.
- **Both levels of the Intermediate License issued** under the GDL program will show the license class as Class D as well as having the words **INTERMEDIATE DRIVER LICENSE** displayed in the yellow header bar on the front of the license. New Tennessee shaped designations on the face of the license document will indicate at which level the license holder currently is under the GDL Program. Yellow indicates 1st level Intermediate Restricted and Green will indicate Level 2 the Intermediate Unrestricted.
 - A minor who is issued the first level **Intermediate Restricted (IR)** Class D will also be given a **"restriction card"** to carry along with the license that explains the restrictions and requirements to advance

Table: 2.4

Overview of New Resident Procedures for Applicants Under Age 18			
New Resident Holding	Conditions	TN Class to be issued	Comments
Learner Permit	Any length of time	PD	Must hold TN PD for 180 days and comply with all other qualifications and levels of GDL
Probationary, Intermediate or Regular Class D	If held less than 90 days	PD	Must begin at TN PD level and follow all GDL regulations
Probationary, Intermediate or Regular Class D	If held for 90 days or more	IR (Intermediate Restricted)	Must hold TN IR for one full year, regardless of length of time already licensed in other state. All GDL restrictions and regulations apply.

Unsafe driving incidents or violations that could result in the suspension or automatic downgrade of license level under The GDL Program are outlined in the following table:

GDL Penalties (Table: 2.5)			
Incident	After PD Issued	After Intermediate Restricted Issued	After Intermediate Unrestricted Issued
(a) Six or more points on driving record	Requires the applicant to continue to hold the learner permit for an additional time period until they are able to maintain a record with less than 6 points for 180 consecutive days	Adds 90 days to the minimum 1 year teen required to hold Intermediate Restricted (Total = 1 year & 3 months)	If any of the violations listed in (a), (b), (c) or (d) occurred during the time the teen had an Intermediate Restricted license, but the DOS did not receive notice from the court until <i>after</i> we had already issued the teen an Intermediate Unrestricted license, the penalties in the preceding column will still apply. The teen will be “dropped back” to an Intermediate Restricted license for 90 days.
(b) Contributing to the occurrence of an accident	N/A	Adds 90 days to the minimum 1 year teen required to hold Intermediate Restricted (Total = 1 year & 3 months)	
(c) Conviction of a 2nd Seatbelt violation	N/A	N/A Adds 90 days to the minimum 1 year teen required to hold Intermediate Restricted (Total = 1 year & 3 months)	
(d) Conviction of a 2nd Moving violation	N/A	Requires completion of a certified driver education course	
(e) Forged letter of parental approval	N/A	Revocation of Intermediate Restricted and Re-issuance of a Learner Permit only until teen reaches the age of 18	If DOS notified <i>after</i> Intermediate Unrestricted issued, teen’s Intermediate privileges will still be revoked and a Learner Permit re-issued until the 18th birthday.
(f) Contributing to the occurrence of a fatal accident	Must maintain a Learner Permit only until teen reaches the age of 18	Revocation of Intermediate Restricted and Re-issuance of a Learner Permit only until teen reaches the age of 18	Revocation of Intermediate Unrestricted and Re-issuance of a Learner Permit only until teen reaches the age of 18

to the second level of the Class D license under the GDL Program. An example is shown on next page.

- A minor who is issued the second level **Intermediate Unrestricted (IU)** Class D will not be issued any special cards as there are not any restrictions upon their driving at this level of the GDL Program.

Additional Requirements for Minors

Minor/Teenage Affidavits

Applicants not yet eighteen years old must have an adult sign a Minor/Teenage Affidavit and Cancellation form, available at all driver license stations. This form confirms that the adult signing the form joins in the application for the license and will be responsible for the actions of the minor driver. It must be signed by a parent, a step-parent living at the same address as the applicant, legal guardian, or a grandparent authorized by the parent, step-parent or guardian.

If adults cannot accompany the minor to the driver license station to sign the form, it may be picked up ahead of time and signed before a notary public.

If the grandparent is assuming financial responsibility for the youth, the grandparent must bring a notarized statement authorizing this, signed by the parent, step-parent, custodian or guardian, as appropriate. The statement is not on a

department form, but should be in the following general format:

“I do hereby authorize _____
 (name of grandparent)
 to sign for a driver license for _____.”
 Signed: _____
 (name and relationship of adult granting authorization)

(Notary certificate)

- If a minor applies for a different class of license (such as motorcycle) the parents or legal guardian will be required to sign a second teenage affidavit for that license type.

Proof of School Attendance/Progress

Applicants under the age of 18 must prove they are either enrolled in or have already graduated from high school. If they have graduated, they must bring their high school diploma or G.E.D. certificate with them when they apply. If not, they need to ask their school to complete a Certificate of Compulsory School Attendance and take the original part of this form with them to a driver license station. The form is valid for only one month.

If a student fifteen years old or older drops out of school, the school is required to notify the Department of Safety which suspends the student’s driving privileges. The first time a student drops out, he or she may regain the privilege to drive

Examples of the license documents issued under the Graduated Driver License (GDL) Program are shown below.

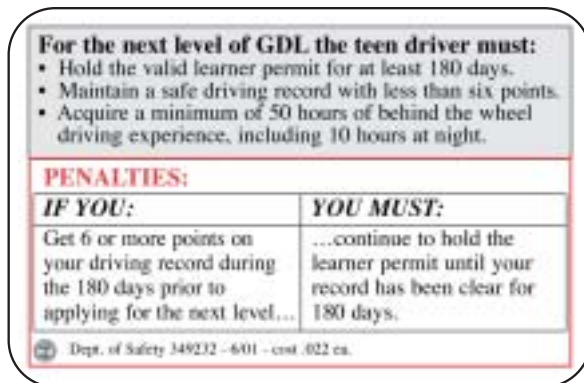

Learner Permit

Front of PD Card

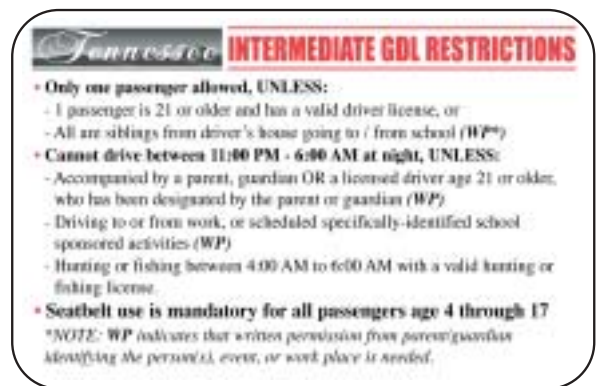

Back of PD Card

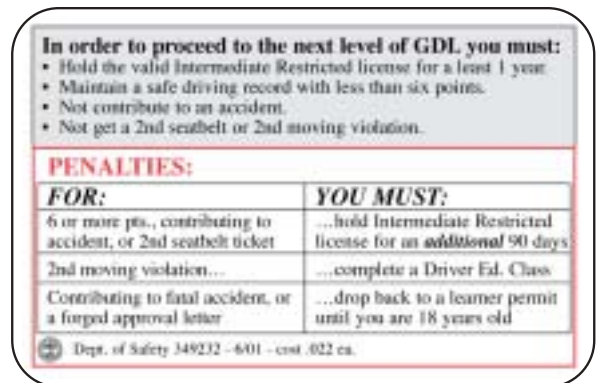

Intermediate Restricted

Back of IR Card

Intermediate Unrestricted

Note: No Restriction Card issued with this level. No driving restriction applied at this level.

by returning to school and making satisfactory academic progress. There is no second chance, however. The second time a student drops out he or she must wait to turn 18 years old before being eligible to apply.

If a person who dropped out does return to school, the appropriate school official can certify the student has returned by completing a different section of the Certificate of Compulsory School Attendance. They will give the student a pink copy of the form to take with them to a driver license station. The student will be required to pay a \$20 reinstatement fee on top of the appropriate application and license fees. Other fees may be added as well, depending on the individual's history.

Teen / GDL FAQs

1. What is the graduated license law?

The new graduated licensing system will place certain restrictions on teens under the age of 18 who have learner permits and driver licenses.

2. Are there any changes in how to apply for a learner permit or intermediate license under the new law?

The process to apply for a learner permit or intermediate license is the same with the exception of an additional \$5 fee for each application. To apply for an intermediate license, a parent, legal guardian or license instructor must present certification that the intermediate license applicant

* See Chapter 2, page 11 for information on acceptable forms of identification

** See Chapter 2, page 13 for more information in SSN requirements

has a minimum of 50 hours of behind-the-wheel driving experience, including a minimum of 10 hours of driving at night.

3. What are the restrictions for those with learner permits?

Anyone under the age of 18 who has a learner permit will be prohibited from driving between the hours of 10 p.m. and 6 a.m. When driving, permit holders must have a licensed driver age 21 or older in the vehicle with them. Seatbelt use is mandatory for everyone in the vehicle under the age of 18 (passengers age 3 and under must be in an approved child restraint device).

4. How long must I have a learner permit before applying for an intermediate restricted license?

Under the new law, anyone under the age of 18 must have their learner permit for a minimum of six months before they can apply for an intermediate restricted license. The minimum age for applying for an intermediate restricted license is 16. If someone with a learner permit gets 6 or more points on their driving record during the 180 days before applying for the intermediate restricted license, they have to continue to hold the learner permit until their record has been clear for a full 180 consecutive days.

5. What are the restrictions for an intermediate restricted license?

A. Seatbelt use is mandatory for everyone in the vehicle age 17 and under (passengers age 3 and under must be in an approved child restraint device).

B. *Those with an intermediate license can only have one other passenger in the vehicle*

UNLESS:

- One or more of the passengers is age 21 or older and has a valid, unrestricted license;
- The passengers are brothers and sisters, step-brothers or step-sisters, adopted or fostered children residing in the same house as the driver and going to and from school AND the intermediate license holder has in their possession written permission from their parent or guardian to transport their siblings.

C. *Those with an intermediate license are prohibited from driving between the hours of 11 p.m. and 6 a.m.*

UNLESS:

- They are accompanied by a parent or guardian;
- They are accompanied by a licensed driver 21 or older who has been designated by the parent or guardian. This designation must be in writing and be in the possession of the teen driver;
- They are driving to or from a specifically identified school sponsored activity or event and have in their possession written permission from a parent or guardian to do this;

- They are driving to or from work and have in their possession written permission from a parent or guardian identifying the place of employment and authorizing the driver to go to and from work;
- They are driving to or from hunting or fishing between 4 a.m. and 6 a.m. and have in their possession a valid hunting or fishing license.

6. What would happen to an intermediate license holder who is caught with a forged or fake letter?

A driver with an intermediate license who is convicted of having a forged or fraudulent letter or statement will have their intermediate license revoked and will be reissued a learner permit until they reach the age of 18.

7. What will my intermediate license look like?

An intermediate license will be similar to regular licenses but will have the word “Intermediate” displayed prominently across the license. You may view examples of these licenses on page 18.

8. How long do I have to keep an intermediate restricted license?

Teens must hold their intermediate restricted license for a minimum of one year. After one year, they can apply for an unrestricted intermediate license. There is a \$2 application fee. Teens need to apply in person at any of the driver testing centers. The word “Intermediate” will still be on the license, but the restrictions will be lifted.

HOWEVER:

If a teen driver has received six or more points (equivalent of two minor traffic citations) on their intermediate restricted license; contributes to a traffic crash; or is convicted of a second seatbelt violation, they will have to wait an additional 90 days to apply for an unrestricted intermediate license, meaning they would be required to hold the intermediate restricted for a total of 15 months.

ALSO:

If the teen driver gets a second moving violation while holding the Intermediate Restricted Driver License, he or she will need to complete an approved Driver Education class before being allowed to get an Intermediate Unrestricted Driver License.

At age 18, a driver could apply for a regular unrestricted license without the word “Intermediate” printed on it. There will be an \$8 duplicate fee unless the driver chooses to keep the license with the word “Intermediate” on it until that license is at the end of its five-year renewal cycle.

9. Are there any teens who will not be affected by the change in the law?

The new law will not apply to anyone age 18 and older OR anyone under the age of 18 who has graduated high school.

Table: 2.7

Tips To Help You Get Your License Faster

✓ Bring the Right Documents

(No photocopies or carbon copies)

EVERYONE:

- Proof of your age and identity (examples on table 2.1)
- Proof of any name changes since birth certificate
- Proof of residency (table 2.2)
- Proof of social security number

PLUS, IF UNDER AGE 18:

- Parent to sign Minor/Teenage Affidavit form
- Proof of School Attendance/Progress (SF-1010 Form)
- Proof of previous driving experience-50 hour certificate (SF-1256 Form)
- Comply with GDL regulations

✓ Clear Up Outstanding Problems You May Have In Any Other States

Tennessee is linked to all of the other states through a computer system known as the Problem Driver Pointer System. Until all problems elsewhere are cleared up, Tennessee cannot issue you a driver license.

✓ Bring The Proper Fees

Common fees are listed in Chapter 2. We can take cash, checks, or money orders payable to the Tennessee Department of Safety.

✓ Come During Our Least Busy Hours

Generally, before 11:00 a.m. our lines are shorter. AVOID LUNCH HOUR OR RIGHT AFTER SCHOOL OR WORK IF YOU CAN. Many of our offices have extended hours offering you service before (7:30 am) or after (6:00 pm) regular business hours. Refer to the table in the back of this manual for office locations and hours.

THE EXAMINATIONS

General Information:

- Your driver license examination will consist of a vision test, a knowledge test, and a road test.
- Driver license tests are given at all driver license stations except for the express service stations. They are administered on a first-come, first-served basis.
- Due to the length of time to administer, road tests are cut off 30 minutes prior to the posted closing time.
- Road tests are not given in extreme weather (heavy rain/snow, dense fog, hail, high winds, icy roads, etc.)
- During winter months road tests are not given in the dark.
- No test may be repeated on the same day.
- Mandatory waiting periods are required when an applicant fails the written or road test for the original issuance of a Class D license or Learner Permit. For details on these waiting periods, see Table 3.1 and 3.2.
- When you return to take a test over, you must bring back all of the original documents you are required to provide.

Determining Which Tests Are Required:

Original License	Class D or Class H Full Tests: Vision, knowledge, road Class PD Vision and knowledge tests Exchanging PD to D Vision and road
Duplicate, Renewal	No Test
Adding For Hire Endorsement	Vision, knowledge
New residents, with out-of-state license	Vision only, if out-of-state license is valid and has not expired; otherwise, full tests.
New residents, from other countries (or no prior license)	Vision, knowledge and road test

Note: See Motorcycle Manual for Class M tests, and CDL Manual for Classes A, B, and C

Vision Screening Test

To determine if a driver can see well enough to drive, a screening test is required before any license or permit is issued. An applicant is required to have at least 20/40 vision in each eye individually and both eyes together. This may be with or without your glasses or contact lenses. If you cannot see this well, you must have an eye specialist of your choice fill out an eye statement for the department to evaluate.

Knowledge Test

You will be given an exam covering knowledge needed to drive safely. The test will consist of multiple choice questions based on information contained in this handbook. Roughly speaking, you can expect the test to cover the following areas:

- Traffic signs and signals—25%
- Safe driving principles—25%
- Rules of the road—25%
- Drugs and alcohol—25%

The knowledge tests are administered in either a written or computerized format dependent upon the station visited. As a rule stations that are equipped with the computerized testing machines routinely require the test be taken in that format on the first attempt.

Stations that have the computerized testing are also currently able to offer the test in 3 alternate language formats of Spanish, Korean or Japanese. Applicants for whom English is not their first language may also use a translation dictionary as long as there are no notes or other handwriting visible within the pages of the book. Interpreters are NOT allowed to assist with any of the driver license testing.

Oral tests are available by appointment at selected stations for applicants who have a learning disability or are illiterate. If the applicant requesting an oral test is under the age of eighteen (18) a written statement from a physician or educational specialist stating that the applicant has a medical condition or learning disability will be required before the test can be administered in the oral format.

Original Class PD or Class D License Testing:

In order to encourage the applicant to thoroughly study the Driver Handbook and cut down on repeat visits by applicants who are not yet prepared for the examination; **the following time restraints will be observed for all original applications for a Class PD or Class D license.** These guidelines are based on the number of questions answered correctly by the applicant on the initial test.

Number of questions answered correctly:	Allow retest after the following mandatory study time period:
24 to 30 Questions Correct	PASS no re-test needed
21 to 23 Questions Correct	Next (1) Day
18 to 20 Questions Correct	Seven (7) Days
15 to 17 Questions Correct	Fourteen (14) Days
14 and fewer Questions Correct	Thirty (30) days

NOTE: The guidelines established above will also be applied to wait times between additional re-testing opportunities if applicant does not pass the examination on the second or subsequent attempts. **THESE GUIDELINES**

APPLY ONLY TO ORIGINAL ISSUANCE OF A CLASS PD OR CLASS D LICENSE.

Any form of cheating by an applicant on a required examination will result in an automatic failure and the applicant will not be allowed to re-attempt the test for a minimum of thirty (30) days. Forms of cheating include, but are not limited to the following:

- Use of any form of written notes (including notes on paper, clothing, body, digital pagers, etc.)
- Talking during the examination (includes cell phone use)
- Attempting to allow another person to take the examination

Road Test

Pre-Trip Vehicle Inspection

The motor vehicle you bring for the road test must meet all Tennessee motor vehicle registration (valid tags) and safety law requirements and have equipment in proper working order. In addition, applicants will be asked to demonstrate their ability to use each of the first eight items (indicated in bold with a '*').

- ***Seat Belts.** Any passenger motor vehicle manufactured or assembled in 1969 or later must be equipped with safety belts and must be in good usable condition for both the applicant and the examiner.
- ***Brakes.** (Emergency and regular). All automobiles must have two separate methods of applying brakes. They must have a regular foot brake and a parking brake.
- ***Headlights.** (High and low beam). Motor vehicles must be equipped with at least two headlights but no more than four white headlights.
- ***Tail and Brake Lights.** Passenger vehicles must be equipped with a rear license light, two red tail lights, and two red brake lights.
- ***Windshield Wipers.** Every vehicle equipped with a windshield should have two (2) windshield wipers for cleaning rain or any other moisture in order to permit clear vision for the driver, unless one (1) wiper cleans to within one (1) inch of the inside of the windshield.
- ***Windshield Defroster and Fan Control.** Applicants need to be able to demonstrate how to 'unfog' the windshield.
- ***Rear View Mirrors.** At least one rear view mirror with nothing interfering with the driver's view of the rear. For applicants with certain vision or hearing impairments, two outside rear view mirrors are also required.
- ***Horns.** A horn is required on all motor vehicles.

Also required:

Windows and windshields. Clear vision for the driver is required to the front, rear and both sides. It is unlawful to drive a motor vehicle with a windshield that is so cracked, or covered with steam or frost that clear vision is prevented. No tinting material may be affixed to the windshield of any motor vehicle. Standards for the other windows depend on the vehicle as follows: **Passenger Car.** No material which

transmits less than 35% of visible light may be attached to any window. **Multi-Purpose Vehicles:** All windows behind the front seat are exempt. Windows immediately to the left and right of the driver must comply the same as for passenger vehicles.

Mufflers. Every vehicle must be equipped with a muffler to prevent excessive or unusual noises and annoying smoke.

Doors. Both the driver door and the passenger door must open from the inside and the outside.

Bumpers. Passenger cars must have bumpers which are within a range of 14 to 22 inches from the ground; 4x4 recreational vehicles must have bumpers with a range of 14 to 31 inches.

Speedometer. Every vehicle must have a working speedometer in order to gauge vehicle speed.

The Driving Test

The examiner will give you directions and evaluate whether or not you can drive safely. You will not be asked to do anything illegal. The only people allowed in the vehicle are you and the examiner (or other authorized personnel). No animal may be in the vehicle. During the test, the examiner will be observing the following:

1. How you prepare to drive. Have you checked your mirrors, fastened your seat belt, turned on any necessary lights or wipers?
2. How you start your vehicle. Do you look for other cars? Do you signal and wait until it is safe before entering traffic?
3. How you control your vehicle. Do you accelerate smoothly? Do you use your gas pedal, brake, steering wheel, and other controls correctly? Handle curves properly?
4. How you handle intersections and make left and right turns. Are you in the proper lane? Do you look both left and right for approaching vehicles? Do you make sure your path is clear before proceeding? Do you simply rely on the traffic signals? Do you signal and change lanes carefully?
5. How you obey the traffic signals and posted signs.
6. How you drive in traffic. Do you pay full attention to driving? Do you scan carefully for signs, signals, pedestrians and other vehicles? Do you yield and take the right-of-way correctly?

7. How you stop. Do you stop smoothly and at the right spot? Can you stop quickly and safely in an emergency?
8. How you back up. Do you look over your shoulder? Can you back in a straight line? Can you turn safely while backing? Can you back into/out of a parking space?
9. How you judge distance. Do you maintain a safe distance from other cars?
10. How you communicate to other drivers. Do you make sudden changes, or signal too late or too early? Do you slow down as early as it is safe to do so, or do you catch other drivers by surprise?
11. How you share the road with others. Are you courteous and watchful?
12. How you change your speed to suit the situation. Do you take into account the speed limit, other cars, light, weather and road conditions?

Causes for Immediate Failure

The applicant will be failed immediately for any of the following:

- Violation of any traffic law
- Lack of cooperation or refusal to follow directions
- Any dangerous action
- Contributing to an accident

When You Don't Pass

Upon completion of the driving test, the examiner will advise you of your errors, how to correct them, and what maneuvers you should practice to improve your driving skill.

You should review the related material and/or practice the driving skills before returning.

Applicants who do not successfully pass the skills test on the first attempt are not permitted to take the examination again on the same day. Applicants may be allowed to re-test after mandatory practice times as determined by their total score (number of errors) under the following guidelines:

In order to encourage the applicant to thoroughly practice their driving skills and cut down on repeat visits by applicants

who are not yet prepared for the examination; the following time restraints will be observed based on the number of errors committed by the applicant on the initial test.

Table: 3.2

Number of errors committed during the skills test:	Allow retest after the following mandatory practice time period:
1 to 6 errors / points	PASS no re-test needed
7 to 9 errors / points	Next (1) Day
10 to 12 errors / points	Seven (7) Days
13 to 15 errors / points	Fourteen (14) Days
16 or more errors / points -OR- Automatic Failure	Thirty (30) Days

NOTE: The guidelines established above will also be applied to wait times between additional re-testing opportunities if applicant does not pass the examination on the second or subsequent attempts.

When You Pass

In most cases, after you have successfully completed the required tests, your photo will be taken and you will receive your photo driver license at this time.

Tips To Help Your Testing Go More Smoothly

✓ Study and Practice Driving Ahead of Time

Both the knowledge test and the road test will go more smoothly if you spend time reviewing this manual, and spend time on the road with an experienced driver before you come to apply.

✓ Bring A Proper Vehicle

All safety equipment must work (horns, lights, seat belts, brakes, signals and windshield wipers). The vehicle registration must also be current. Bring a vehicle that you are familiar with driving.

DRIVING RESPONSIBILITY

Problem Driver Pointer System

The Problem Driver Pointer System (PDPS) is a federally mandated program which requires Tennessee to do a national computer check **before** issuing a driver license. If you apply for a Tennessee license — whether it is your first license here, or some other transaction such as a renewal — and you have a problem in another state, we cannot issue you a license until the matter is resolved.

The national computer listing contains names and limited other identifying information about individuals whose licenses have been canceled, denied, revoked, or suspended, or who have been convicted of certain serious traffic violations. If you do have a problem in another state, the examiners will provide you the name of the state reporting the problem and a telephone number you can use to contact that state to clear your record there.

Please Note: To find out specific information about what the other state has reported to the PDPS system, you have to call the other state. Tennessee does not have this information. We are only provided with the fact that the other state has reported a problem.

Losing Your Privilege To Drive

In Tennessee, a driver license may be revoked or suspended for the following offenses:

1. Driving under the influence of alcohol or drugs, including implied consent
2. Allowing unlawful use of a driver license, including fraudulently altering a driver license or allowing another individual to use your license or identification
3. Mental or physical difficulties
4. Leaving the scene of a personal injury or fatal accident; failure to stop and render aid in an automobile accident
5. Perjury, or giving false information on the use or ownership of an automobile, or for the issuance of a driver license
6. A felony that involves the use of an automobile
7. Evading arrest while operating a motor vehicle
8. Manslaughter/vehicular homicide involving the operation of an automobile
9. Two (2) reckless driving violations within twelve (12) months
10. Drag racing
11. Habitual offenders of moving traffic violation
12. Unsatisfied judgment resulting from the negligent operation of a motor vehicle
13. Purchasing or possessing any alcoholic beverage if 18-20 years old
14. Failure to comply with child support requirements
15. Driving a motor vehicle away from a gas station without paying for dispensed gas or diesel fuel.

16. Failure to show evidence of financial responsibility to officer when involved in an accident or charged with a moving violation.

In addition, persons under the age of 18 may lose their privileges for:

- Convictions of any drug or alcohol offense, whether or not the offense occurred while driving;
- Dropping out of school (which is defined as having ten consecutive or 15 total days in a semester of unexcused absences);
- Failure to make satisfactory progress in school (which in general means passing three subjects per grading period); or
- Weapons violations

Finally, commercial motor vehicle operators have separate rules and regulations governing their commercial driver licenses (CDL's) which can cause them to lose their driving privileges. These are discussed in the CDL Study Manual.

WHENEVER A DRIVER LICENSE IS SUSPENDED OR REVOKED, IT MUST BE TURNED IN TO THE DEPARTMENT OF SAFETY WITHIN 30 DAYS OF THE SUSPENSION OR REVOCATION.

The license may be mailed to the Tennessee Department of Safety, 1150 Foster Avenue, Nashville, TN 37249-4000. Any Tennessee Highway Patrol Office or Driver License Station can take your license and see that you are given credit for turning it in.

FAILURE TO SURRENDER YOUR LICENSE MEANS THAT YOU WILL BE FINED \$75.00 IN ADDITION TO ANY OTHER FINES AND COSTS YOU MAY OWE.

Hearings

Before any license is suspended or canceled, the department will notify the licensee in writing of the proposed suspension or cancellation. If your license is about to be suspended or revoked, the department will give you an opportunity for a hearing prior to action, except in cases of final judgments and convictions.

Non-Resident Violator Compact

Tennessee is a member of the Non-Resident Violator Compact. The compact is an agreement between states to ensure that a person receiving a citation for a traffic violation appears in court or otherwise complies with the terms of the court for the citation.

In a nutshell, this compact means that regardless of where you receive a citation for a traffic violation, you must either

appear in court to answer the citation or meet any other requirement the court may set out to satisfy the citation. If you ignore the citation — whether it was issued for a traffic violation here or in another member state, your driving privileges will be canceled or suspended.

The same consequences apply to non-residents who receive a citation in Tennessee and fails to answer the citation. The suspension remains in effect until the court notifies Tennessee that the citation has been properly disposed of and the proper fees are paid to this department.

Reinstatements

Steps you need to follow to have your driver license reinstated depend on several factors, including why you lost your license and what else is on your record. To clear your record, you must contact:

**Tennessee Department of Safety
Financial Responsibility
1150 Foster Avenue
Nashville, Tennessee 37210
Phone: (615) 741-3954, or
TDD—Telecommunications Device for the Deaf:
(615) 532-2281
Email Address: FinResp.Safety@state.tn.us**

Driver Improvement Program

The Department of Safety keeps records of traffic violations and accidents for each driver. These records are based on reports forwarded to the department by the courts, and on reports of traffic accidents submitted by investigating officers. Drivers who accumulate twelve (12) or more points within a twelve (12) month period receive a notice of proposed suspension. In an effort to keep drivers aware of the possibility of losing their privilege to drive an advisory letter is mailed to a licensee having 6 to 11 points on their driving record within any 12 months.

A Defensive Driving Course may be attended as an alternative to suspension; however, the Defensive Driving Course may be taken only once in any five (5) year period. After a hearing, the department will take whatever action is necessary to correct and improve poor driving habits by education, re-examinations, placing necessary restrictions on the licensee and probation. Should these steps be unsuccessful, the department will have no other choice than to suspend the person's driving privileges.

The assignment of point values, for various offenses, is designed to impress upon drivers that unless they comply with traffic laws and regulations, they may establish a bad driving record leading to suspension of driving privileges.

Frequent Traffic Violations

Frequent traffic violations are a most dangerous and costly habit. If you are suspended for frequent violations, upon the completion of the suspension time, before you can receive your regular license, you must pay the appropriate

reinstatement fees and establish future proof of financial responsibility (SR-22 Form) with the Department.

DRIVING WHILE YOUR LICENSE IS SUSPENDED WILL RESULT IN THE EXTENSION OF THE SUSPENSION PERIOD AND IN ALL LIKELIHOOD WILL RESULT IN CRIMINAL PROSECUTION.

Restricted Driver Licenses

When a driver license is suspended or revoked, but the driver depends on his or her driving to make a living or to continue schooling, there are certain conditions in which the driver may apply for a restricted driver license. The restricted license permits the driver to operate a motor vehicle for very specific purposes and only such purposes as are spelled out when the license is issued. The procedures for applying for a restricted license depend upon the reason the license was taken away in the first place, as summarized below:

1. **Financial Responsibility:** When a person's license is revoked for failure to provide proof of financial responsibility and they are employed to operate an employer's vehicle, they may apply for an approval letter from the Financial Responsibility Section and pass appropriate tests.
2. **DUI:** After the first conviction for DUI, provided the driver does not have a prior conviction of DUI, or adult driving while impaired within 10 years, or a prior conviction of vehicular homicide as the proximate result of intoxication aggravated vehicular homicide, or vehicular assault, the trial judge may issue an order for a restricted license to go to and from work, attend college full time, drive as part of employment or to attend certain court-ordered events. When applying at the driver license station, these applicants must submit two (2) copies of the court order and proof of insurance (SR-22 from their insurance company), and pass all appropriate tests.
3. **Driver Improvement:** Any person whose driver license has been suspended for frequent traffic violations may obtain this type of license by applying to the Driver Improvement Section of the Tennessee Department of Safety. They will be required to submit their approval letter, present proof of SR-22 insurance and pass appropriate tests.
4. **Implied Consent:** A person whose license has been suspended by the court for Implied Consent may apply to the trial judge for a restricted license to operate a motor vehicle for going to and from work, full-time college and working at his or her regular place of employment. At the time of application, two (2) copies of a court order and proof of SR-22 insurance must be submitted.
5. **Juvenile:** Minors who lose their license because of the Drug Free Youth Act may apply to the trial judge for a restricted license. They must bring two copies of the court order to a driver license station and pass vision, knowledge, and skills tests. Proof of insurance is not required.

POINTS FOR MOVING TRAFFIC VIOLATIONS AND ACCIDENTS (Table: 4.1)

POINTS	SPEEDING	
3	Where speed not indicated	Construction Zone: 4 pts.
1	1 thru 5 m.p.h. in excess of speed zone	Construction Zone: 2 pts.
3	6 thru 15 m.p.h. in excess of speed zone	Construction Zone: 6 pts.
4	16 thru 25 m.p.h. in excess of speed zone	Construction Zone: 7 pts.
5	26 thru 35 m.p.h. in excess of speed zone	Construction Zone: 7 pts.
6	36 thru 45 m.p.h. in excess of speed zone	Construction Zone: 8 pts.
8	46 m.p.h. and above in excess of speed zone	Construction Zone: 8 pts.
POINTS	MOVING TRAFFIC VIOLATION	
8	Operating without being licensed or without license required for type of vehicle being operated (under suspension)	
8	Driving while license canceled	
8	Reckless endangerment by vehicle — misdemeanor	
8	Adult driving while impaired	
6	Reckless driving	
6	Passing school bus taking on or discharging passengers	
6	1st Offense violation of driver license restrictions	
6	Fleeing law enforcement officer	
5	Leaving the scene of an accident (Property damage only)	
4	Signs and control devices — Failure to obey traffic instructions	
4	Improper passing — Passing where prohibited	
4	Wrong way, side or direction	
4	Failing to yield right of way	
4	Careless or negligent driving	
4	Violation of bumper law	
3	Following improperly	
3	Making improper turn	
3	Speed less than posted minimum	
3	Operating without being licensed or without license required for type of vehicle being operated (not under suspension)	
3	Miscellaneous — Failure to maintain control, improper control, etc.	
2	Failure to signal change of vehicle direction or to reduce speed suddenly	
2	Following emergency vehicles unlawfully	
POINTS	ACCIDENTS	
8	Contributing to occurrence of an accident resulting in the death of another person	
4	Failure to Report Accident	
4	Contributing to occurrence of an accident resulting in bodily injury	
3	Contributing to occurrence of an accident resulting in property damage	

Physical Or Mental Disabilities

When evidence is received by the department that an individual's ability to drive may be affected by a physical or mental disorder, the licensee will be required to submit within twenty (20) days of notification, a medical certificate from a competent doctor stating the effects of the illness or disability on the individual's ability to safely operate a motor vehicle. If the report is unfavorable, the driving privilege will be suspended until the condition improves.

Re-Examination Of Drivers

If there is evidence a licensee's ability to safely operate a motor vehicle is questionable, he or she may be directed to report to the nearest Driver License Station and submit to a complete driver examination. Appropriate corrective action may be directed and certain restrictions (should they be required) may be placed on the license.

NOTE: Failure to respond to departmental requests for a medical certificate or submission to a driver license examination within the prescribed time will result in the suspension of the driving privilege.

Financial Responsibility

The purpose of this law is to protect you and the public from financially irresponsible drivers who become involved in an accident, as well as from drivers who have repeated violations and disregard of the law.

The best way to protect yourself and your driver license would be to have adequate insurance to cover death, bodily injury, and property damage.

First, a few definitions:

- *Liability insurance* provides coverage for damages you cause to other persons.
- *Collision insurance* provides coverage for damages sustained by your vehicle.
- *Uninsured motorist insurance* provides for coverage for the damages uninsured persons cause you.

Collision insurance is not required by law. However, the Financial Responsibility Law requires drivers to produce evidence of financial responsibility to the officer when charged with a moving violation or involved in a motor vehicle accident, without regard to apparent or actual fault. Evidence of financial responsibility presented to the officer

can be in the form of a declaration page of your insurance policy, an insurance binder, an insurance card from an insurance company authorized to do business in Tennessee, a certificate issued by the Commissioner of the Department of Safety stating that a cash deposit or bond in the amount required by statute has been paid or filed with the Commissioner, or proof of qualification as a self-insurer as provided by statute. If unable to present evidence and convicted on the charge of failure to show evidence of financial responsibility, your driving privileges will be suspended. Before reinstatement of your driving privileges, you would be required to submit evidence of financial responsibility along with any other requirements.

Reporting Accidents

Drivers must notify local law enforcement officials of any accident involving death, injury, or property damage over fifty dollars (\$50).

In addition, certain accidents — called “reportable accidents” — must be reported to the Tennessee Department of Safety. These include any accident within this State in which any person is killed or injured, or in which damage to the property of any one person, including oneself, is in excess of four hundred dollars (\$400.00).

Regardless of who is to blame, the operator and/or owner of a vehicle involved in a reportable accident in this state must file a report of the accident within 20 days to the Tennessee Department of Safety. The accident report forms can be obtained at any Highway Patrol office or from your local police. Failure to report an accident may result in suspension of your driving and registration privileges.

If you contribute to a reportable accident you must also do one of these three things: (1) Show proof you had liability insurance at the time of the accident; (2) obtain notarized releases from all parties that file claims with the department; or (3) post cash or corporate surety bond with the department for the amount of damages sustained by other parties. **IF YOU DO NOT COMPLY WITH THESE REQUIREMENTS YOU WILL HAVE YOUR DRIVING AND REGISTRATION PRIVILEGES REVOKED.**

If your driving privileges are revoked due to a conviction or failure to file security after an accident, in addition to all other requirements you must have a liability insurance carrier file an SR-22 Form with this department before your privileges can be reinstated.

Traffic Accidents

If You Are Involved In An Accident — STOP! The law requires drivers of vehicles involved in an accident to stop immediately at the scene, or as close to the scene as possible without obstructing traffic. Notify the police immediately.

After stopping your vehicle, give your name, address, driver license number, and vehicle registration number to the other driver, and ask him for the same information.

Remain calm and stay at the accident scene. Don’t blame other people or accept blame, and don’t discuss the accident.

Wait for the law enforcement officer and answer all questions truthfully and calmly.

As discussed above, you must report the accident to the Department of Safety if it involved death, personal injury, or property damage in excess of \$400 to any one person. They must be completely filled out and filed within 20 days of the accident. If the driver sustained an injury and cannot complete the report, it can be filed by a passenger, or by the owner. If the accident involved an unattended vehicle or a domestic animal, and you cannot locate the owner, report the accident to the police.

If You Arrive First At An Accident Scene — If you can help, park your car off the road and turn on your emergency flashers.

If you have them, warn oncoming traffic with flares so that cars approaching the accident scene will not strike the wrecked vehicle.

Have someone notify the police.

Turn off the ignition in the damaged vehicle to prevent a fire. If the car is on fire, help the people out and take them away from the vehicle to prevent further injury in the event of an explosion.

If someone is pinned under a wrecked car, don’t try to lift it unless you have enough strong people available to help, and not until after you have checked to make sure that no one will be pinned under the other side. Generally, unless you know what you are doing it is best to wait for the police and emergency squad to free crushed or pinned victims.

If you are not the first at an accident scene and your assistance is not needed, drive on. Do not slow down or stop just to satisfy your curiosity. Move on so that you do not interfere with the arrival of the police and emergency equipment.

Emergency First Aid — Generally, medical assistance should be given only by properly trained persons. However, you may find yourself in a situation where immediate assistance is unavailable and you may have to help the injured victims. In these cases, remember these basic first aid rules:

Unless absolutely necessary because of the danger of fire or some other hazard, avoid moving the injured person. If he must be moved, get help and try not to change the position in which he was found. If possible, cover him with coats or blankets to keep him warm. Never lift a victim by holding him under the shoulder (armpits) and knees.

If a victim appears to have a broken back or a broken neck, and you bend him forward or sit him up, you may cut his spinal cord and paralyze him permanently.

Control excessive bleeding with thick cloth pads, as clean as possible, applied with pressure by hand or by bandaging.

Cover burns with clean cloths to reduce the pain. Apply no ointments. Do not offer the injured anything to drink.

If the injured person does not seem to be breathing, attempt to revive breathing through emergency artificial respiration.

ALCOHOL, OTHER DRUGS AND DRIVING

5

PLEASE NOTE: *Tennessee is serious about educating the public on the tragedies of driving under the influence of drugs or alcohol. To underscore this, by law at least 25% of the knowledge test drivers have to take must consist of questions dealing with this topic.*

Drinking and Driving

Alcohol and You

Researchers estimate that between the hours of 10 p.m. and 2 a.m. one out of every ten drivers is intoxicated. More than one-third of these drivers have been drinking at someone else's home. Nearly 50 percent of the drivers arrested for driving under the influence (DUI) are social to moderate drinkers. Don't think that it won't happen to you. In your lifetime, there's a 50-50 chance that you'll be involved in an alcohol-related crash.

An Overview Of The Effects Of Alcohol

Before the motoring public can fully understand why drinking and driving result in fatalities on our highways, we first need a better understanding of the effects of alcohol on the body.

How Does Alcohol Affect the Body?

Alcohol begins to be absorbed into the bloodstream within one to two minutes after an alcoholic beverage is consumed. As you consume alcohol it accumulates in your blood. Intoxication occurs when you drink alcohol faster than the liver can oxidize it. As the percentage of alcohol in your blood increases, you become more intoxicated.

Once in the bloodstream, the alcohol is distributed to all parts of the body, including the brain and liver. Upon reaching the liver, the alcohol immediately begins to be oxidized. The liver can only oxidize about one drink per hour. Contrary to popular belief, this rate cannot be increased by drinking coffee, exercising, taking a cold shower, or anything else.

Only time can sober a person who's been drinking. And remember, it is a slow process.

What Is Blood Alcohol Concentration (BAC)?

BAC stands for Blood Alcohol Concentration. BAC is expressed in percentage of alcohol to blood. The higher the BAC number, the more impaired a person is. In most states, including Tennessee, .10 is the level of intoxication which is always illegal. This means that for every 1,000 drops of blood in a person's body, there is at least one drop of alcohol. BAC changes with body weight, time spent drinking, and the amount of alcohol that is consumed. (Note: Effective July 1, 2003 - Tennessee will reduce the BAC level to .08.)

Amount of Alcohol Consumption. Each drink consumed within an hour increases the BAC level. Therefore, the more you drink in a fixed amount of time,

the higher your BAC will register. This happens no matter what you weigh — or what kind of alcoholic beverage you drink.

Rate of Alcoholic Consumption. Drinking three drinks in one hour will affect you more than drinking three drinks in three hours. Spacing your drinks over a longer period of time will slow the rate at which you become intoxicated and indicates responsible drinking habits.

Body Weight and Fat. The heavier the person, the more alcohol it takes to raise the BAC. Be aware of your size when drinking with others. If you are smaller than your friends and try to drink as much as they do, your judgment and inhibitions will probably be affected before your friends are.

Body fat also affects how quickly you are affected by alcohol. Alcohol is able to be absorbed in water, not fat. This simply means that those with less body fat have more water in which to dilute the alcohol. So, drink for drink, if people weigh the same, the one with more body fat will show signs of intoxication first.

Amount of Food in the Stomach. All the alcohol consumed eventually gets into the blood whether you have eaten or not. Food in the stomach causes alcohol to be absorbed more slowly, thus slowing down the rate, and the amount of intoxication.

Overall Condition of the Body. Heavy and chronic drinking can harm virtually every organ and system in the body. The liver is particularly vulnerable to alcohol's harmful effects since it oxidizes approximately 90 percent of the alcohol in the body. If the liver is damaged or diseased, the rate of oxidation is reduced, causing the alcohol to stay in the body longer and the BAC to be higher for a longer time. Further, the effects of alcohol on the liver can lead to such diseases as hepatitis and cirrhosis.

Relationship of Alcohol To Traffic Crashes and Accident Risks

Driving after drinking is a widespread problem. It is estimated that two in every five Americans (or 40%) will be involved in an alcohol-related crash at some time in their lives.

Each drink drastically increases your risk of having an accident. Look at the table below. With a BAC of .10%, you are **seven** times more likely to cause an accident than if you were sober. As your BAC increases to .15%, your chances increase to **twenty-five** times and at .17% BAC, you are **fifty** times more likely to cause an accident.

Behavior at each BAC level may differ somewhat with the individual. ALL people at the .10% level are definitely too impaired to drive safely. **Research has proven driving skills, good judgment and vision are greatly impaired at BAC**

Alcohol's Effects At A Glance Table: 5.1

BAC	Rough Number of Drinks	Risk of Automobile Crash	Comment
.01-.03%	◇ 1 drink within 15 min.	Rises for young adults, others with low tolerance for alcohol	Stiff penalties for BAC as low as .02 if driver under age 21
.04-.06%	◇ 2 drinks within 1/2 hour	Definite risk for anyone with low tolerance levels	Most people feel high and have some loss of judgment. You may get louder and have some loss of small muscle control, like focusing your eyes.
.07-.09%	◇ 3 drinks within 1 hour		Your sight and hearing are worse. It is harder for you to detect danger. You have less sense of balance
.10%-above LEGAL INTOXICATION* — Judgment and reasoning powers are severely hampered; cannot do common simple acts. Definitely unsafe to drive.			
.10-.12%	◇ 4 drinks within 2 hours	Risk of automobile crash increases 7 times normal rate	Many people claim they're not affected anymore, as if they could drink themselves sober — definitely not thinking straight.
.13-.15%	◇ 5-7 drinks within 3 hours	Crash risk 25 times normal rate	You have far less muscle control than normal and feel happy even though stumbling and acting foolishly.
.16-.25%	◇ 8-12 drinks within 4 hours	Crash risk 50 times normal rate	You are confused and need help doing things, even standing up. Alcohol-related highway fatalities sharply increase.

*Lower levels are set for younger drivers, commercial drivers, and subsequent offenses, as discussed later in this chapter.

levels as low as .03 and .04%, especially for young drinkers. The table, **Alcohol's Effects at a Glance** (next page), describes different levels of intoxication and degree of behavior impairment at each level.

Alcohol's Effects On Driving Ability

Driving involves multiple tasks, the demands of which can change continually. To drive safely one must maintain alertness, make decisions based on ever-changing information present in the environment, and execute maneuvers based on these decisions. Drinking alcohol impairs a wide range of skills necessary for carrying out these tasks. Fatal injuries resulting from alcohol-related traffic crashes represent a tremendous loss of human life.

The plain and simple fact is that you cannot drive safely when you are impaired by alcohol. The two abilities most important to the driving task are *judgment* and *vision* — both of which are affected by small amounts of alcohol. Your ability to judge speed, time, and distance are altered even after having only one drink. Each drink thereafter markedly affects your driving ability. In addition, your *reaction time* and *coordination* begin to deteriorate, while your *alertness* and *concentration* fade. All of this adds up to a deadly combination.

Judgment — *Ability to think clearly and make quick decisions*

Good judgment decreases with the use of alcohol. The concern for physical well being is lessened. This causes unnecessary and dangerous risks to be taken when drinking

and driving. Examples are driving too fast, passing cars without enough clear distance and speeding around curves. "Showing off" is another example of impaired judgment.

Vision — *Ability to see clearly straight ahead, to the side, and at night*

Alcohol decreases clearness of vision. Seeing clearly at night is reduced by more than half. Glare vision is poor because of relaxed eye muscles. Glare recovery is also slowed by alcohol. Side vision is reduced by about 30% at .05% BAC. Judging depth or distance is affected because alcohol causes each eye to get a slightly different picture. These vision impairments greatly increase chances of a head-on or rear-end collision. **Eye muscles are relaxed by alcohol and cannot focus properly. Because the eyes provide almost 90 percent of the information used in driving, any restriction in vision can cause disastrous results.**

Reaction Time and Coordination — *Ability to react quickly and safely to an emergency or hazardous situation — being able to keep eyes, hands and feet working together*

Reaction and coordination are impaired by alcohol as low as .02% BAC. It takes longer to react. The skills necessary to drive safely, coordination to control the car with hands, feet and eyes in response to other vehicles and the road are drastically reduced as alcohol intake increases.

Alertness and Concentration — *Being ready to react to changing driving conditions or situations — keeping your mind on driving and paying attention to the task at hand.*

Alcohol, in any concentration, is a depressant, not a

stimulant. Alcohol slows all nerve impulses and body functions. The false feeling of stimulation, with small doses, comes from lessening of inhibitions due to the particular portion of the brain controlling this part of behavior being relaxed. In reality, alcohol has the effect of “fuzzing” a driver’s ability to be alert and to concentrate.

“Every Day” Drugs

One of the most common and most dangerous instances of drug abuse occurs when people mix alcohol with prescription and over-the-counter drugs. For example, when alcohol is combined with another depressant, like tranquilizers or sedatives, etc. the results are not just added together, they are multiplied. Even some over-the-counter medicines can affect driving. The effects are much stronger, much more dangerous and can affect your driving skills.

If your doctor prescribes a tranquilizer or sedative, make a point to discuss how the drug will affect your ability to drive safely. Just because a drug is prescribed is — by law — no defense for driving under the influence of it.

Non-prescription drugs, such as cold tablets, cough syrups, allergy remedies, etc., purchased over-the-counter may contain antihistamines, alcohol, codeine, and other compounds that can be especially dangerous for drivers. You should read labels and pay attention to warnings (e.g. “may cause drowsiness,” “do not operate machinery,” “caution against engaging in operations requiring alertness”).

Again, if you have questions about a particular drug or combination of drugs, check with your doctor or pharmacist.

Driving Under The Influence Of Drugs Or Alcohol (The “DUI” Law)

Studies indicate that marijuana and other drugs also affect judgment and motor functions, making driving under the influence of drugs other than alcohol **dangerous**. In Tennessee it is unlawful for any person to drive or be in physical control of an automobile or other motor-driven vehicle on any public street, highway, road, or alley, or while on the premises of any shopping center, trailer park or any apartment house complex, or any place frequented by the public while

1. under the influence of any intoxicant, marijuana, narcotic drug, or drugs producing stimulating effects on the central nervous system; or
2. while the alcohol concentration of the operator’s blood or breath is .10% or higher.

It is not only unlawful if the alcohol concentration of a person’s blood or breath is **.10%**, but also for first convictions, there is a presumption that the defendant’s ability to drive is sufficiently impaired to constitute a DUI violation. On second or subsequent offenses, a BAC of **.08%** would create the presumption of intoxication.

Strictly speaking, a driver can register a BAC of **.00%** and still be convicted of a DUI. The level of BAC does not clear a driver when it is below the “presumed level of

intoxication.” If a law enforcement officer observes such things as erratic driving behavior, or maintaining an inappropriate speed (too fast or too slow), this would be cause for stopping the vehicle to investigate. Further sobriety checks could lead to the conclusion that the driver was indeed “Driving Under the Influence” of an intoxicant, narcotic drug, or other drug-producing stimulating effects on the central nervous system including prescription drugs. If you have any doubt about your ability to drive, don’t get behind the wheel.

be kept confidential.**

NOT IN MY STATE

Implied Consent Law

By law, when you drive in Tennessee you have given your consent to be tested to determine the alcohol or drug content of your blood. This test must be administered at the request of a law enforcement officer having reasonable grounds to believe you have been driving under the influence of an intoxicant or drug.

If you are placed under arrest and a law enforcement officer asks you to take the test and you refuse, the test will not be given. The court will send notification of action to the Department of Safety and your driver license will be suspended for twelve (12) months.

Consequences Of DUI Arrest

Drinking and driving poses several problems. One is the probability of an accident and another is being arrested for DUI. The penalties for a DUI arrest are the same whether the driver was drinking alcohol or taking drugs (even prescription or over-the-counter drugs). If you are arrested for DUI, the consequences can be severe.

Minimum DUI Penalties Table: 5.2

	Minimum Jail Time	Minimum Fines/ Revocation Period	Vehicle Seizure
FIRST CONVICTION	48 hours	\$350.00/ One (1) year	Does not apply
SECOND CONVICTION	45 days	\$600.00/ Two (2) years	If your second violation occurs within five years of your first DUI conviction, and both events happened after January, 1997, your vehicle is subject to seizure and forfeiture.
THIRD OR SUBSEQUENT CONVICTION	120 days	\$1,100.00/ Three (3) years – Ten (10) max.	Vehicle is also subject to seizure and forfeiture.

Penalties Applying To Any DUI Conviction

Regardless of whether the conviction for driving under the influence is a driver's first or not, several other laws apply:

- **ID'S With "DUI Offender."** If a person with a license revoked for DUI applies for a photo identification license to carry during the period before his or her license can be restored, the department is required to indicate on the ID that the person is a DUI offender.
- **Seizure of Vehicle.** Beginning January 1997, if a person's driving privileges are revoked for DUI, and he or she is charged with driving on a revoked license, the driver's vehicle can be seized and forfeited. This holds true for any DUI conviction, whether it is the driver's first or not.

There are two basic instances where your vehicle can be subject to seizure:

1. If a driver is charged with driving on a revoked license when their driving privileges are already revoked as a result of any DUI conviction (first or subsequent).
 2. If a driver has two DUI convictions within five (5) years and both events happened after January, 1997.
- **Vehicular Homicide.** If you are operating a motor vehicle under the influence of a drug or alcohol and you are involved in an accident that results in the death of another person(s), you may be charged with vehicular homicide and if convicted, **you may be fined and sentenced to prison.** These laws have recently been strengthened so that it is possible to be imprisoned for **up to 60 years.**
 - **Aggravated Assault** — If you are operating a vehicle under the influence of a drug or alcohol and you are involved in a motor vehicle accident that results in the injury of another person you may be charged with aggravated assault and if convicted, **you may be fined and sentenced to prison.**
 - **Child Endangerment** — Known as the Drunk Driving Child Protection Act, this law adds penalties for those who violate DUI laws when accompanied by

a child under thirteen (13) years of age. There is a mandatory minimum incarceration of thirty days and a mandatory minimum fine of \$1,000, both of which are added onto any other incarceration and fine required by law.

If the child suffers serious bodily injury, the violation is a Class D felony, and if the child actually dies, it is a Class C felony of especially aggravated child endangerment.

Additional DUI Penalties

In addition to the minimum penalties, the judge shall impose the following conditions:

- Participation in an alcohol safety DUI school program, if available; or
- Upon the second or subsequent conviction, participation in a program of rehabilitation at a treatment facility, if available; and
- The payment of restitution to any person suffering physical injury or personal losses as the result of such offense if such person is economically capable of making such restitution.

Courts may also, at their discretion, order the person to operate only a motor vehicle which is equipped with a functioning **ignition interlock device**, and may order this restriction to continue for a period of time up to one year after the person's license is no longer suspended or restricted under normal provisions. Effective October 1, 2002, a person with **2** DUI's in a five year period **MUST** operate a motor vehicle with the ignition interlock device for six months after reinstatement of driving privileges.

DUI's Are Expensive!

Besides being extremely dangerous and against the law, DUI's are costly. In addition to the fine and court costs, a person charged with DUI can be faced with posting bond to get released from jail, attorney fees, loss of time from work to attend court hearing(s), fees for an alcohol safety course, increased insurance premiums, and other expenses. This can add up to several thousand dollars.

Young Driver Risks And Laws

Not Just Driving — Riding With Others!

Young people remain especially vulnerable to the threat of alcohol and other drugs, not only from impairment of their own driving, but from getting in the car with other drivers

Can you afford a nearly \$10,000 night on the town?

\$9,115.50 is probably more than you plan on spending for a night out with a friend. Or is it? A first offense DUI (Driving Under the Influence) charge could easily add up to such a staggering cost! The cost could be even higher if you don't qualify for the restricted driver license for driving to work during your suspension. This could add expense for alternate transportation (taxi, bus fare, etc.) or even worse the complete loss of your employment.

Towing Fee - Car Storage	\$50
Bail	\$50
Defense Attorney	\$2,000
Court Costs	\$200
License Reinstatement Fee	\$153
Proof of liability insurance in effect at time of DUI arrest? If not additional fee of:	\$65
Additional charge if driver license not surrendered within specified time:	\$75
Restricted Driver License (only for driving to and from employment on specific, most direct route from home during the time your license is revoked)	\$67
SR-22 Insurance required for a minimum of 3 years (results in higher insurance rate)	\$2,000 per year (average - could be higher depending on your driving record)
Driver License Examination and re-issue of regular driver license after suspension time:	\$19.50
Loss of 2 days employment (48 hour jail time on first offense)	\$86 - minimum wage for 2 eight hour days (Significantly higher amount dependent up on individual's pay rate)
TOTAL Potential Cost to you (includes 1st offense DUI fines listed above)	\$9,115.50

who are not sober. TRAFFIC CRASHES ARE THE LEADING KILLER OF YOUNG PEOPLE, AND NEARLY HALF ARE ALCOHOL RELATED. In a national survey, nearly half of 10th graders and a third of 8th graders reported having ridden during the past month with a driver who had used alcohol or other drugs before taking the wheel.

Accident records indicate that young drivers under the influence of small amounts of alcohol appear to have more driving problems than older drivers. Most teenagers are intoxicated at low BAC levels. The young driver's chance of an accident is much greater with BAC between .01-.09% than older drivers. This is due to low tolerance of alcohol and driving experience.

The decision is yours. Be responsible and smart — help yourself and your friends!

Under Twenty-One Laws

In addition to the standard penalties for driving under the influence of drugs or alcohol discussed in the next section, there are three special laws that apply to people under the age of twenty-one:

REMEMBER, DRIVING WHILE UNDER THE INFLUENCE OF DRUGS — EVEN PRESCRIPTION DRUGS — CARRIES THE SAME PENALTIES AS FOR ALCOHOL.

- **“18-20 Alcohol Violations”** — If you are 18, 19, or 20 years old and are convicted of purchasing, attempting to purchase, or possessing any alcoholic beverage, you will lose your privilege to drive for one year. If it happens again, you will lose your license for two years. The law applies to *any* alcohol-related conviction, whether or not you were driving or even in a vehicle. Just having a can of beer at a party could cost you your driver license.
- **“Juvenile Offenders”** — If you are between the ages of 13 and 17 and found to have possessed, consumed, or sold either alcohol or drugs, your driving privilege will be suspended for one year or until age 17, whichever is longer. Even if you have never been licensed, you could lose your privilege to drive until you reach age 17. If you have a second conviction, the suspension is for two years or until age 18, whichever is longer.
- **“Under 21 BAC”** — A person age 16 or over but under the age of 21 who is found driving with a BAC of .02%, or under the influence of alcohol or any other drugs, commits the act of driving while impaired. Penalties include losing your license for one year, a fine of \$250, and public service work.

Prevention Of Drinking And Driving

The best advice, of course, is simply to not drink when you know you are going to drive. One of the most successful programs in recent years has been the “designated driver” concept, where friends agree ahead of time which person will remain strictly sober. Many night clubs will offer the designated driver free non-alcoholic beverages for the evening. Young people who do not want to drink in the first place are finding it more socially acceptable to offer to be the designated driver.

Avoiding The Risks

Alcohol-related crashes are not accidents. They can be

prevented. If you are planning a night on the town, decide before you start drinking that you are not going to drive. Remember, alcohol affects your judgement. It's a lot more difficult to make the decision not to drive after one or two drinks. Use the following tips to keep from drinking and driving and still have a good time.

Drive to social events in groups of two or more and have the driver agree not to drink.

Arrange to ride with a friend who is not drinking.

Before you start drinking, give your vehicle keys to someone who isn't drinking and who won't let you drive after drinking.

If someone offers you a drink and you plan to drive, simply say, "No thanks, I'm driving."

If You Choose To Drink

If you choose to drink alcoholic beverages you should control your drinking to stay within your limit. Drinking in a responsible and mature manner means that you are aware of your physical and mental condition. You also:

- Set a limit in advance and stick to it
- Drink at a slow pace
- Watch for signs of impairment

- Use time to get rid of alcohol

If despite your best intentions you realize you have had too much to drink, consider using public transportation to get home. Taking a cab could be a lot cheaper than paying a fine or losing your driver license! Beyond taking a cab, you could:

- Offer the keys to a non-drinking friend
- Stay over night at the party giver's home or a hotel within walking distance
- Call a parent or friend to pick you up and take you home

If You Are the Host

You assume a great amount of responsibility when you entertain your friends at home and serve alcoholic beverages. To help prevent the consequences of drinking and driving, you should do the following during the party:

- Encourage some of the guests to be designated drivers
- Serve food, such as cheese and crackers
- Always offer non-alcoholic drinks
- Do not mix strong drinks or be in a hurry to refill glasses
- Close the bar at least two hours before guests depart
- Do not serve additional drinks to a guest who has had too many!
- Do not serve additional drinks to a guest who has had too many.

Percentage of Fatal Accidents Involving Alcohol

Let's Keep This Up!

NOTE: This chapter was written in consultation with the Tennessee Statewide Clearinghouse for Alcohol, Tobacco & Other Drug Information and Referral.

For further information on the general subject of drug and alcohol use and abuse, or for referrals for help with such problems, they may be reached at their toll-free "Redline" at 1-800-889-9789. Or, check their Website: www.tncclearinghouse.com.

Did You Know?

1. Alcohol, in any concentration, is a depressant not a stimulant. Alcohol slows all nerve impulses and body functions. The false feeling of stimulation, with small doses, comes from lessening of inhibitions due to the particular portion of the brain controlling this part of behavior being relaxed.
2. The amount of alcohol in one (12 oz.) bottle of beer is about equal to that in a (1 oz.) shot of whiskey.
3. When alcohol is consumed, it quickly reaches the brain where it, in effect, short-circuits the parts that control judgment, emotions and confidence.
4. The first thing affected after drinking alcohol is a person's **judgment**.
5. Reliable research studies show that 2 or 3 drinks of alcohol impair the driving ability of most individuals.
6. A driver with a BAC of .10% or more is intoxicated (in the presumptive level).
7. It takes about one hour to cancel the effects of one

drink. It takes about 3 hours to cancel the intoxicating effects of 3 drinks.

8. Alcohol-related vehicle accidents are the number-one killer of people under the age of 40.
9. Many drugs, including the “miracle” drugs, can impair your ability to drive. They can make an ill person feel well enough to drive, but can also affect alertness, judgment, coordination and vision.
10. The combined use of alcohol and other depressant drugs, such as antihistamines, may be more dangerous to health and highway safety than the effects of either the alcohol or drugs alone.

We Are Doing Better

Over the past few years, Tennessee has seen a progressive decrease in the percentage of fatal accidents involving alcohol. Prior to 1990 it was common for half of all fatal accidents to involve alcohol. Since then there has been a steady decline, so that in 2000 (the most recent year for which data is available), the percentage has dropped to 36%.

“YOU DRINK & DRIVE YOU LOSE” — The Department of Safety has chosen to participate in this National Highway Traffic Safety Administration (NHTSA) Program. The focus of this program is to reduce the number of drinking and driving violations occurring on Tennessee roadways. Tennessee is one of many states participating in this program. Our efforts, combined with those from other participating states, will serve to make all roadways safer.

PROTECTING PASSENGERS/DRIVERS

Tennessee Safety Belt Laws

"It's the Law"

(T.C.A. 55-9-602, 55-9-603)

- No person shall operate a passenger motor vehicle in the State of Tennessee unless such person and all passengers four (4) years of age or older are restrained by a safety belt at all times the vehicle is in forward motion.
- No person with a learner permit or an intermediate driver license shall operate a passenger motor vehicle in this state unless such person and all passengers between the ages of four (4) and seventeen (17) years of age are restrained by a safety belt at all times the vehicle is in forward motion.
- Children are further protected by the law, which makes the driver responsible for their protection through age fifteen (15). If the child is under the age of four (4), the child must be properly seated in a child passenger restraint system meeting federal motor vehicle safety standards. Once the child is four years old, he or she must be buckled up, either in standard seat belts or an approved child-restraint system.
- Tennessee law further requires every occupant sixteen (16) years through seventeen (17) years of age to wear a safety belt throughout the vehicle. Failure to comply could result in a \$20.00 fine for the occupant.

SEAT BELTS SAVE LIVES

Safety Belts Facts

Seat belts and child safety seats help prevent injury five different ways. By:

1. Preventing ejection

Ejection greatly increases the chance of death or serious injury, in fact the chance of being killed in a crash by being ejected from a vehicle is 1 in 8. Safety belts virtually eliminate ejection. The belted driver stays inside the car often protected from injury.

2. Shifting crash forces to the strongest parts of the body's structure.

- To get the most benefit out of your seat belt, you should be aware of the following points:
- The lap belt should be worn low over the pelvis with the bottom edge touching the tops of the thighs snugly.
- The shoulder belt should be worn over the shoulder and across the chest, **NOT** under the arm and over the abdomen. Make certain that the shoulder belt is not worn so loosely that it slides off your shoulder.
- Pregnant women should wear the lap belt below the abdomen and the shoulder belt above the belly.

3. Spreading forces over a wide area of the body.

Safety belts reduce the possibility of injury from "hostile" surfaces inside the car (steering wheel, dashboard, windshield, controls, etc.). Even if the belted driver does collide with some of these surfaces, they do so with much less force and are often spared more serious injury.

4. Allowing the body to slow down gradually.

The belt keeps the driver "in the driver's seat." The belted driver is better able to deal with emergencies and often avoid more serious trouble.

5. Protecting the head and spinal cord.

The belted driver is less likely to be stunned or rendered unconscious by the accident and is better able to cope with the situation. Research has found that proper use of lap/shoulder belts reduces the risk of fatal injury to front seat passenger car occupants by 45% and the risk of moderate-to-critical injury by 50% (for occupants of light trucks, 60% and 65% respectively).

- Every 14 seconds someone in the U.S. is injured in a traffic crash, and every 13 minutes someone is killed.
- Seat belts are the most effective safety devices in vehicles today, reducing the chance of injury or death in a crash by 45% and saving nearly 10,000 lives annually.
- Failure to use a seat belt contributes to more fatalities than any other single traffic safety-related behavior.
- In 2001, traffic crashes on Tennessee's roadways killed 1,251 people and caused 74,856 injuries. Sadly, many of those deaths and injuries could have been prevented if only the victims had taken the time to buckle up.

Road Test Reminder

Any passenger motor vehicle manufactured or assembled in 1969 or later must be equipped with seat belts and they must be in good usable condition for both applicant and examiner use.

The Belted Driver Has Better Control of the Car

The seat belt holds the driver in the driving position designed to give maximum comfort and maximum control of the car. Belts also tend to reduce fatigue. The belted driver stays more alert. **Also the facts are clear: In an accident, the belted driver is much more likely to survive uninjured.**

Common Fears and Misconceptions about Seat Belts:

Many people still have “*bad information*” about using safety belts. For example:

- “*Safety belts can trap you inside a car.*” It takes less than a second to undo a safety belt. Crashes where a vehicle catches fire or sinks in deep water and you are “trapped”, seldom happen. Only one-half of one percent of all crashes ends in fire or submersion. Even if they do, a safety belt may keep you from being “knocked out”. Your chance to escape will be better if you are conscious.
- “*Some people are thrown clear in a crash and walk away with hardly a scratch.*” Most crash fatalities result from the force of impact or from being thrown from the vehicle. Your chances of not being killed in an accident are much better if you stay inside the vehicle. Safety belts can keep you from being thrown out of your vehicle, into the path of another one. Ejected occupants are four times as likely to be killed as those who remain inside the vehicle.
- “*If I get hit from the side, I am better off being thrown across the car; away from the crash point.*” When a vehicle is struck from the side, it will move sideways. Everything in the vehicle that is not fastened down, including the passengers, will slide toward the point of the crash, not away from it.
- “*Safety belts are good on long trips, but I do not need them if I am driving around town.*” Over half of all traffic deaths happen within 25 miles of home. Many of them occur on roads posted at less than 45 m.p.h.

BUCKLE UP

**IT'S WORTH
THE EFFORT**

Tennessee's Child Passenger Protection Laws

Tennessee cared enough about children to become the first State in the country to pass a Child Passenger Protection Law. This law requires:

1. That any person transporting a child under the age of four (4) years old in a motor vehicle upon a road, street, or highway in Tennessee shall be responsible for protecting the child and properly using a child passenger restraint system meeting federal motor vehicle safety standards.

- A 2001 amendment allows a mother to remove a child under four (4) years of age from a child passenger restraint system only when the mother is nursing the child.

Remember, holding a child in your lap, even if you have on your seat belt, does not protect the child. In fact, your own body weight in an impact could add serious damage to the child. While the above makes it legal for a mother to nurse while the vehicle is in motion; the safest recommendation is still to pull over and stop briefly for this need.

2. That a person transporting a child between four (4) and eight (8) years of age who weighs less than forty pounds (40 lbs.) shall provide for the protection of the child; by properly using a separate carrier, an integrated child seat or a belt positioning booster seat.
3. That any person transporting any child between four (4) and eight (8) years of age who weighs forty pounds (40 lbs.) or more, -OR- any child, between eight (8) and fifteen (15) years of age shall be responsible for the protection of the child by properly using a passenger restraint system, including safety belts meeting federal motor vehicle safety standards.

By promoting child passenger safety, Tennessee attempts to protect its most precious resource from needless death and injury. Why needless? Consider the following:

- Motor vehicle crashes are the leading cause of death for children 5 to 14. An average of eight children are killed and more than 900 are injured in crashes every DAY.
- Children who are properly secured in safety seats survive three quarters (3/4) of the crashes that would otherwise be fatal.
- The proper use of child-restraint devices could prevent **nine out of ten deaths** and **eight out of ten serious injuries** to child passengers under the age of four.

Unfortunately, many of these needless injuries result in permanent disabilities such as paralysis, brain damage, epilepsy, etc.

Set a Good Example - Always Buckle Up

Think about what your child sees you do in the car. Do you wear your safety belt? Children follow their parents' example. Set a good example and remember you want to stay alive to share the beautiful years of your child's growth.

There have been studies conducted that show children's behavior in the car improves when they learn how to ride in their child-restraint device and it becomes habit. Make it a habit for your child. A habit you can both live with.

Put children in their place—in child-restraint devices or seat belts!

Tips For Using Seat Belts With Children

When your child “graduates” from the child-restraint system to seat belts, it is very important for the belts to lie across the correct area of the child's body. Generally this will be approximately around the age of eight or when the child reaches a height of 4'9”.

Basically a child is big enough to use the vehicle lap and shoulder belt when they can sit with their back against the vehicle seat back with their knees bent over the edge of the vehicle seat without slouching. The lap belt should lie securely on the child's upper thigh, low and snug around the hips. The shoulder belt should fit snugly across the chest and rest between their neck and shoulder. Never put the shoulder belt behind the child's back or under their arm.

Always remember **“Belts to Bones”**. The pelvic bone and the collar bone should bear the pressure of the seat belts. If the safety belt system seems to ride up too high on the child's stomach or the shoulder harness lays across the face or neck area of the child, you should continue to use a booster seat or one of the many models of high back booster seats that incorporate the vehicle's existing safety belt system.

Children ages 12 and under are safer in the back seat of a vehicle.

Air Bag Safety

Air bags can HELP save your life. There have been over 800,000 air bag deployments, and air bags have been credited with saving more than 4,011 lives since 1987 according to information provided by the National Highway Traffic Safety Administration. Even if your car has airbags, always wear your seat belt. *Airbags are **supplemental** restraint systems that work **WITH** seat belts, not in place of them.* They help protect adults in a frontal crash, but they don't provide protection in side or rear impact crashes or in rollovers. Most tragedies involving air bags could be prevented if air bags are used in combination with a safety belt and if children under 12 are properly restrained in the rear seat of the vehicle.

“The Back Is Where It's At” for children 12 and under. While air bags have a good overall record of

providing supplemental protection for adults in the event of a crash, they pose a severe risk for children ages 12 and under. Research shows that children and air bags simply do not mix. Several children have been killed by a deploying air bag. In many cases, the child was not properly buckled, was completely unbuckled, “out of position”, or the child was in a rear-facing infant seat placed in the front passenger seat. Children are safer properly restrained in a child restraint-device or seat belt in the back seat of a vehicle, regardless of whether the vehicle is equipped with a passenger side airbag. **NEVER PLACE A CHILD SAFETY SEAT IN THE FRONT SEAT WHERE A FRONT MOUNTED PASSENGER AIR BAG IS PRESENT.**

An important item to remember is that an air bag is not a soft, billowy pillow. Air bags were developed to prevent vehicle occupants from striking the steering wheel or dashboard. The air bag deploys and immediately deflates — faster than the blink of an eye. Air bags **combined with** safety belts are the most effective protection currently available in a car or truck.

If you drive, own or ride in a vehicle equipped with either a driver-side and/or passenger side air bag you should follow the following safety points:

Adults

- Always wear the lap AND shoulder safety belts
- If you have an adjustable steering wheel always try to keep it tilted down in a level or parallel position.
- Sit as far as possible from the steering wheel (or dashboard on passenger side) to give the air bag room to deploy and dissipate its energy; ten (10) to twelve (12) inches between the chest and the air bag module is recommended by the National Highway Traffic Safety Administration (NHTSA).

Children

- Children 12 and younger should always ride in the back seat, properly buckled up or restrained in a child restraint device.
- Infants in rear-facing seats should **NEVER** be placed in the front seat of a vehicle with a passenger-side air bag.
- Infants should be properly restrained in the back seat.
- If a child must ride in the front seat of a vehicle with a passenger-side airbag, the seat should be moved back as far as possible and the child should be properly buckled up.

Air Bag Deactivation?

Should air bags be deactivated? No, not unless you meet one of the four following criteria:

1. The driver cannot sit 10 to 12 inches from the steering

wheel and air bag module, and drive the car safely.

2. The driver and/or passenger(s) has one of several unusual medical or physical conditions.
3. The driver must transport children under 12 in the front seat because the car has no rear seat or because of a car pool situation.
4. An infant in a rear-facing infant seats must be transported in the front seat because the car has no rear seat.

Vehicle owners and lessees can obtain an on-off switch for one or both of their air bags only if they can certify that they are, or a user of their vehicle is in one of the four risk groups above. To be considered eligible for an on-off switch a NHTSA request form must be filled out and returned to the National Highway Traffic Safety Administration (NHTSA). Forms are available from state driver license and registration offices and may be available from automobile dealerships and repair facilities. Forms may also be requested by contacting NHTSA's Auto Safety Hotline at 1-888-DASH-2-DOT (1-888-327-4236) or visiting the NHTSA Web site at <http://www.nhtsa.dot.gov>.

Other Child Passenger Protection Laws

It is now not only common sense, but against the law to allow children under the age of twelve to ride in the bed of a pickup truck. The only exceptions are:

1. When the vehicle is being used in an organized parade, procession, or other ceremonial event.
2. When the vehicle is being used for agricultural purposes.
3. In certain local areas where children over age six who are not yet 12 year old are in vehicles traveling on local streets and roads.

Even with these exceptions, if a child under the age of six is in the pickup truck bed, the vehicle must travel 20 miles per hour or less.

Each year more than 200 people die as a result of riding in the cargo area of pickup trucks. More than half of these deaths are children and teenagers.

Follow The Four Steps of Child Passenger Safety

- 1. When to use a rear-facing child safety seat**
From birth to at least 20 pounds **and** at least one year of age. The harness straps should be at or below shoulder level. For babies who are under one year and over 20 pounds, be sure they ride in a safety seat approved for heavier babies and continue to ride rear-facing until at least one year of age.
- 2. When to use a forward-facing seat.** If a child is at least 20 pounds and at least one year old to about 40 pounds and about age four. The harness straps should be at or above shoulder level. Most convertible, forward facing seats require use of the top slot for forward facing seats.
- 3. When to use a booster seat.** If the child is over 40 pounds up to 80 pounds and under four feet, nine inches tall. Belt-positioning booster seats must be used with both lap **and** shoulder belts. **Never use a booster seat with a lap belt only.** Make sure the lap belt fits low and tight to avoid abdominal injuries.
- 4. When to buckle up a child in an adult seat belt.** If a child is over 80 pounds and at least four feet, nine inches tall. If a child can sit with their back straight against the vehicle seat back cushion, with their knees bent over the vehicle's seat edge without slouching, they can be moved out of the booster seat into the regular back seat.

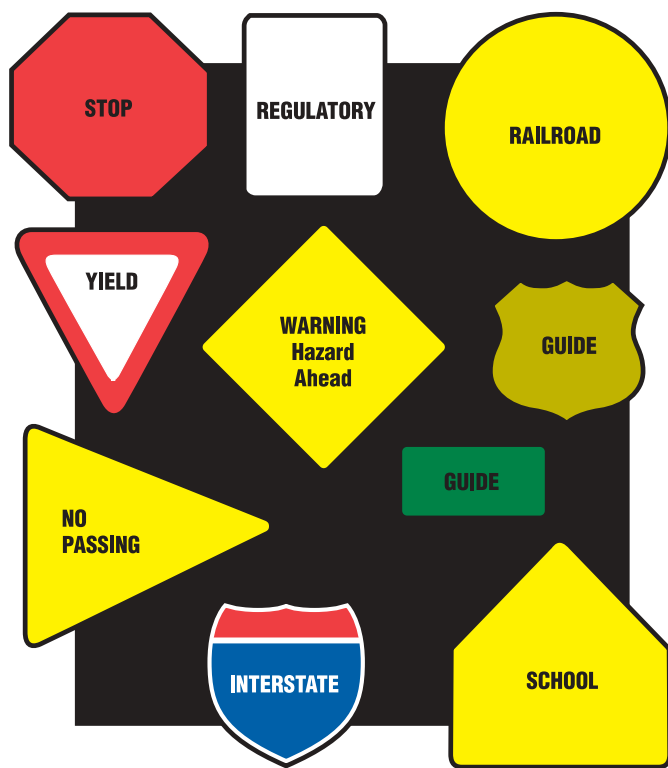

TRAFFIC SIGNS

Traffic signs give you information about the road, the highway system, traffic flow, and the local regulations and laws. They warn you about hazards, identify your route, and direct the speed and movement of traffic. These signs also provide directions and let you know about places of interest, from the huge overhead green interstate signs to the little blue rectangles that direct you to a library or hospital.

Every traffic sign has a definite shape and colors that announce their purpose and specific meanings. You should be able to recognize them immediately. Even if a stop sign is damaged or blocked by dirt, limbs or snow, you should know by the octagonal shape and red color that you must stop.

Sign Shapes and Colors

Learn the standard colors and shapes (shown below) so you know what a sign means, even at a distance. For example, a rectangle is always a regulatory sign, telling you about laws and regulations or giving you instructions such as speed limits or lane uses.

Color Codes On Highway Traffic Signs

Colors of Signs Series

The colors to be used on standard signs shall be as follows:

RED is used only as a background color for STOP signs, multiple supplemental plates, DO-NOT-ENTER messages, WRONG WAY signs and on Interstate route markers; as a legend color for YIELD signs, parking prohibition signs, the circular outline and diagonal bar prohibitory symbol.

			
RED: Stop, yield, do not enter or wrong way.	YELLOW: General warning.	ORANGE: Construction and maintenance warning.	BLACK: Regulatory. Route markers.
			
BROWN: Public recreation areas and parks.	GREEN: Distance direction and information.	WHITE: Regulatory	BLUE: Motorist services guidance.

The meanings of the eight basic background colors of signs should be memorized.

BLACK is used as a background on ONE-WAY signs. Black is used as a message on white, yellow and orange signs.

WHITE is used as the background for route makers, guide signs, the Fallout Shelter Directional sign, and regulatory signs, except STOP signs, and for the legend on brown, green, blue, black and red signs.

ORANGE is used as a background color for construction and maintenance signs and shall not be used for any other purpose.

YELLOW is used as a background color for warning signs, except where orange is specified herein, and for school signs.

BROWN is used as a background color for guide information signs related to points of recreational cultural interest.

GREEN is used as a background color for guide signs (other than those using brown or white), mileposts, and as a legend color with a white background for permissive parking regulations.

BLUE is used as a background color for information signs related to motorist services (including police services and rest areas) and the Evacuation Route Marker.

Four Other Colors — Purple, light blue, coral, and strong yellow-green have been identified as suitable for highway use and are being reserved for future needs.

Whenever white is specified herein as a sign color, it is understood to include silver-colored reflecting coating or elements that reflect white light.

Traffic signs are placed to help you and to instruct you in the best and safest use of the highway. All signs must be obeyed at all times unless a policeman or other traffic officer directs you to do otherwise. Study and learn the signs on the following pages and notice that the shape of each sign has a general or specific meaning.

Octagon Shape — Stop

This sign is the only eight-sided sign you will see on the highway. It always means that there is danger. It will always be red with white lettering. It tells you that you are approaching an important street or highway and that you must bring your car to a complete stop, not going beyond the crosswalk. If you cannot see, then proceed cautiously to a point where you can see, and then go only if you can do so safely.

4-Way or All Way: Red Rectangle — Added below a stop sign, means all traffic approaching this intersection must stop.

Triangular Shape — Yield

This three-sided sign means that you are approaching an intersection and must stop and wait if any other vehicles are approaching from the right or left on the other highway. If you are sure no other cars are coming you need not come to a complete stop but you must slow down and enter the intersection with caution. You must stop when traffic warrants.

Round Shape — Railroad Ahead

This circular sign always means that you are approaching a railroad grade crossing. You must slow down and be ready to stop. This sign tells you that it is up to you to stop if you see a train coming. **NEVER TRY TO “BEAT” THE TRAIN. YOU WILL USUALLY MISJUDGE ITS SPEED.** More than 200 traffic crashes occur each year at railroad crossings. Do not play with your life trying to “beat the train.”

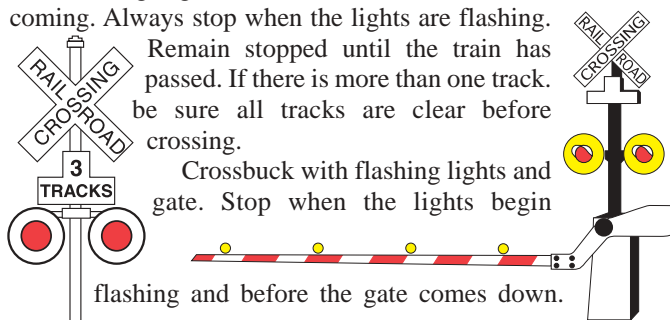

Broad “X” Shape — Railroad Here

This is known as a crossbuck sign. It is placed at all railroad grade crossings, and tells you exactly where the tracks are located. Notice the smaller signs placed on the post directly below the crossbuck. They will tell you the number of tracks at a particular crossing. This is very important because, when there are two or more tracks, one train passing might hide the approach of a train from the other direction.

Flashing lights on a crossbuck mean that a train is coming. Always stop when the lights are flashing.

Remain stopped until the train has passed. If there is more than one track, be sure all tracks are clear before crossing.

Crossbuck with flashing lights and gate. Stop when the lights begin

flashing and before the gate comes down.

Remain stopped until the gates are raised and the lights stop flashing.

Diamond Shape — Hazardous Or Unusual Condition Ahead

These signs call for caution and usually for a slower speed. Some carry written information. Others are miniature symbolic road maps that warn of highway conditions ahead. This sign tells you that you are approaching an intersection. The black lines show you just what kind of intersection this is. This sign tells you it is a crossroad. (See more examples of warning signs on pages 43-44)

Rectangular Shape—Special Laws, Regulations Or Important Information Applies Here

• Lane Control

The signs below indicate that traffic in the respective lanes must either move straight through or turn left. They may also direct certain vehicles (such as trucks) as to which lane

they must travel. Variations of these signs will limit turns by showing an arrow with the word “Only,” and others will indicate that traffic must turn right. These signs are sometimes mounted overhead.

The sign shown at right (High Occupancy Vehicle) indicates lanes reserved for buses and vehicles with the minimum number of occupants specified on the sign.

• Speed Control

Speed Limit Signs. These signs tell you the maximum speed allowed, the minimum speed required, or of a change in speed limit.

The sign on the far right is used whenever children are within walking distance of school. It tells you that children may be crossing the street on their way to and from school.

This type of sign is controlled by a time clock and flashes yellow lights while illuminating the speed limit. Failure to obey the posted school zone limit could result in serious injury or loss of life to **Tennessee's most valuable asset, its children.**

Regulatory Signs

This sign is used on a highway which has four lanes or more. It means that you must drive in the extreme right-lane unless you want to pass a slower-moving car or make a left turn. Never straddle lanes or drive in the center lane when you are moving more slowly than other traffic around you.

- *No Passing Signs* - These signs tell you where passing is not permitted. Passing areas are based on how far you can see ahead. They consider unseen hazards such as hills and curves, intersections, driveways and other places a vehicle may enter the roadway.

A triangular No Passing Zone sign can also be used. These signs are yellow or orange and placed on the left side of the roadway.

These signs which have a white background and a red circle and line diagonally through them mean "NO" according to what is shown behind the red symbol. For example:

NO TRUCKS

NO BICYCLES

NO LEFT TURN

NO U TURN

This sign tells you that, in the area where this sign is placed parking is forbidden.

This sign tells you that you are approaching a one-way street and that you must not enter from the direction you are traveling.

Tennessee law (T.C.A. 55-8-139) makes it illegal to stand in a roadway to solicit a ride. Hitchhiking is not only dangerous to the pedestrian, but also to the driver of the vehicle who stops to pick up a stranger. It is recommended that you neither hitchhike nor pick up hitchhikers.

Warning Signs

This sign tells you to be prepared for a rather sharp turn to the left. The turn sign is used to mark turns with a recommended speed of 30 m.p.h. or less.

Curve Sign

This sign tells you that you must be prepared for a curve to the right. The curve sign is used to mark curves with recommended speed in the range between 30 and 55 m.p.h.

Reverse Turn Sign

This sign tells you that you must turn right, then left. The reverse turn sign is used to mark two turns in opposite directions that are less than 600 feet apart.

Advisory Speed Plate

The smaller sign on the post beneath this sign is used to supplement warning signs. It gives you the recommended maximum safe speed.

You will see this sign — or one saying, “SLIDES” in some hilly areas. Both of these signs warn of rocks which may be in the road; not of rocks which may strike you from overhead. Watch the roadway, not the hill.

This sign indicates that there is a STOP sign you can't yet see just ahead — so you should start to slow down at this point. A similar sign using a symbol shaped like a traffic light and the black arrow indicates there is a “traffic signal ahead.”

This sign indicates that there is a YIELD sign you can't yet see just ahead — so you should start to slow down at this point.

This sign warns you that the road ahead narrows and that you must plan to move into the left lane. Don't forget to check behind you before you begin this maneuver and signal your intentions.

This sign alerts you to the possibility of traffic blending into the main stream of travel. After checking to your rear you should move into the other lane, if possible, to allow the merging motorist a clear path.

This sign tells you that the bridge is too narrow to be safe at average passing speeds; you must slow down and drive cautiously when you are crossing a bridge which displays this sign.

You will see the following sign near school grounds or buildings. This sign warns you to slow down, drive with caution, and watch for children. It is placed as you approach a school.

Warning Signs

SLIPPERY WHEN WET

CATTLE CROSSING

TWO-WAY TRAFFIC

LEFT LANE ENDS

BIKE CROSSING

WINDING ROAD

LOW CLEARANCE

CHEVRON
A sharp change in
direction ahead

T-INTERSECTION AHEAD

T-INTERSECTION
You must turn right or left. Be
prepared to yield.

Work Area Signs - These construction, maintenance or emergency operations signs are generally **diamond or rectangular** shaped, **orange with black letters or symbols** and warn you that people are working on or near the roadway. These warnings include reduced speed, detours, slow moving construction equipment and lane closures. In work areas, a person with a sign or flag may control traffic. You must obey the directions of these persons.

Construction Signs

Channeling Devices

Channeling Devices
Used to direct traffic flow.

Barricades, vertical panels, concrete barriers, drums and cones are the most common devices used to guide drivers safely through work zones. When driving near these devices, keep your vehicle in the middle of the lane and obey the posted speed limit. As you leave the work zone, stay in your lane and maintain your speed. Don't change lanes until you are completely clear of the work zone.

Electronic Message

or Arrow Signs - These are mobile devices that are often used on some roadways to give you advance warning of construction zones, special traffic directions, road closures or in some cases weather hazards.

Flashing arrow panels advise approaching drivers of lane closures. You must begin to merge into the remaining open lane(s) well in advance of this sign.

Highway Flaggers

You will see flaggers such as these pictured below at numerous construction sites along our highways.

Please learn these three simple signals since they are the most commonly used by construction

flaggers. Flaggers at some worksites may use paddles with the word stop on one side and slow on the other instead of red flags. The basic hand movements for stop and proceed remain the same whether a flag or paddle is used.

Slow-Moving Vehicle (SMV) Emblem

Recognize this sign. Some day (or night) it may save your life. Look at it!

During daylight the bright fluorescent orange solid triangle in the center of the SMV emblem is highly visible. At night, the SMV emblem glows brilliantly in the path of approaching headlights.

You may see this emblem on slow-moving vehicles such as farm tractors, machinery, construction equipment, or horse-drawn vehicles.

Object Marker

Hazard to left

These markers warn you of objects not actually in the roadway but so close to the edge of the road that they need marking.

Typical applications include bridge ends, underpass abutments and other obstructions closely adjacent to the edges of the roadway.

Hazard to right

Guide Signs For Highways

PRIMARY ROUTE
(Primarily Connects Cities)

A sign such as the one below will show two highways are coming together or separating. The sign to the left denotes a State secondary highway while the one to the right indicates a U.S. highway that will reach into another state. Drivers should become thoroughly familiar with route

numbers and signs they must follow when beginning a trip from one area to another. They should approach signs such as the one below with caution and should be alert for drivers nearby who are not familiar with the area highways.

Interstate Route Marker

Indicates that the route is one of the routes comprising the national system of interstate and defense highways. These highways join centers of population and defense establishments and join with the major international highways at the Mexican and Canadian borders, they constitute a nationwide network of the most important highways.

Guide Signs On Interstates

These are signs to help you while driving on Tennessee's

Interstate and Defense Highways. The signs are above or to the right of the highway with the arrows pointing to the lane you should be in if you intend to enter or leave the road.

This sign is seen on Interstates and Expressways. The background is green with white lettering and/or numbers visible at some distance. Such signs give information vital to selection of lane, proper exits, etc.

If an Interstate guide sign is marked with the above sign, all traffic in the lane(s) directly below the arrows MUST exit.

Service Signs

The blue color of these signs indicates that they provide direction to motorist service facilities. Word message signs will also be used to direct motorists to areas where service stations, restaurants and motels are available.

Handicap Symbol

Parking spaces displaying this blue sign are reserved for vehicles bearing disabled veteran or handicapped license plates, or a special handicapped decal. The use of reserved handicapped spaces by others is prohibited by law. Please be courteous!

Directional Signs

The green background signs indicate that the message is providing directional information. New directional signs will point to bike and hiking trails.

Reference Markers

RAMP SIGN

In order to help motorists better identify their location on urban interstates, the state has installed interstate reference markers every 1,000 feet along heavily traveled sections. These have been installed in Nashville and Knoxville, and are planned for Memphis and Chattanooga in the near future.

The signs display information about the route number, direction of travel, and the "log mile" in tenths of a mile. Most are mounted on the median dividers. Thus, motorists with mobile phones who notify emergency operators about incidents will be able to give an accurate description of the exact location where assistance is needed. This will help emergency personnel respond more rapidly, and possibly make the difference between life and death. It will also help clear the highways more quickly.

MAIN LINE SIGN

Uniform Highway Markings

The information in Chapter Seven is taken from the United States Department of Transportation's Federal Highway Administration's (FHWA) Manual on Uniform Traffic Control Devices, which all highway agencies must use in marking and signing roadways under their jurisdiction. Until all states have completed marking, drivers may encounter both the old and new markings. BE ALERT and follow directions.

Word and symbol markings on the pavement are used for the purpose of guiding, warning, or regulating traffic.

Symbol arrows indicating more than one movement is permitted; arrows indicating only one movement is mandatory.

Traffic Signals

Traffic signals are used to control drivers of vehicles and pedestrians at some intersections and crosswalks. Signals promote better movement of traffic on busy roads by assigning right of way. Generally, if a signal is not working, stop as you would if there were stop signs in all directions (4-Way Stop). Common courtesy and the right-of-way law say that the driver on the right who arrives first gets to go first. However, stay cautious and be sure it is safe to proceed even when you are the first vehicle to reach the intersection.

Traffic control devices include traffic signals, signs and pavement markings. Traffic control can also be provided by law enforcement, highway construction personnel or school crossing guards. You must obey directions from these individuals, even if their directions are different than what the traffic lights and signs indicate. Also remember that regardless of the color of a traffic signal ALL vehicles must yield the right-of-way to any approaching emergency vehicles.

- **Traffic Lights** are usually placed at heavily traveled intersections. These lights tell you when or where to stop and go. A green light means you can go if it is safe. A yellow light means caution, prepare to stop for the red light and the red always means stop. Standard traffic lights are red, yellow and green, from top to bottom respectively.

RED — Stop behind crosswalk or stop line. Unless otherwise posted, you may turn right on red after coming to a complete stop and when no pedestrians or cross traffic are present.

YELLOW — Caution, prepare to stop. Red stop signal will be exhibited immediately thereafter. Adjust your speed immediately so you may come to a smooth stop. You must stop if it is safe to do so. **DO NOT SPEED UP TO BEAT THE LIGHT.** If you are already IN the intersection when the yellow light comes on, do not stop but continue cautiously through the intersection. Tennessee law only requires the yellow light to be exhibited for a minimum of **3 SECONDS before the red light.**

Collisions often happen at intersections on yellow lights. Not only is it dangerous for you to ignore the yellow light because you may hold up oncoming traffic that receives the green light, you also must be aware that some drivers often “jump the green” and start through an intersection because they have seen the yellow light come on from the crossing directions. If you try to “beat the yellow” and another driver decides to “jump the green” the results could be deadly!

GREEN — Go IF the intersection is clear. You must yield to pedestrians and vehicles still in the intersection at light change. The green signal gives you the permission to proceed, however you must still observe the laws of the right-of-way. Yield to oncoming vehicles if you are turning left. Never

attempt to “jump the green” by starting through the intersection early or by making a quick left turn in front of oncoming traffic. This is extremely dangerous!

Protected Arrows - At many intersections you may see what is called a “protected turn arrow”. when the arrow is green, you have the right-of-way and may drive the vehicle only in the direction of the arrow after yielding to vehicles and pedestrians already in the intersection. When the arrow changes to yellow, prepare to yield to oncoming traffic. When the arrow is red or your lane has the red light, all turns are prohibited, even if other lanes of traffic have a green signal and your path through the intersection appears to be clear.

When traffic lights have added lights with directional arrows, drivers may cautiously enter the intersection only to make the movement indicated by the arrow. The light for your lane controls the direction in which you may lawfully proceed.

If traffic circumstances have left you in an intersection waiting to make a left turn, and the light turns red, you should complete the turn when the traffic clears. Do not try to back up, or stay in the intersection blocking traffic. Better yet, don’t find yourself in this situation! You should not pull into an intersection to make a turn until your path is clear.

FLASHING YELLOW

Slow down and proceed with caution at the intersection.

FLASHING RED

Complete stop. Same as stop sign. Look both ways, yield to traffic and pedestrians and proceed when it is safe to do so.

- **Pedestrian Signals** - allow pedestrians to know when it is legally permitted and safe to cross a street or intersection. Pedestrians can promote traffic safety and protect themselves by observing the following rules:

A. “Walk” Sign: Many streets with significant pedestrian traffic will have a pedestrian signal that displays the word “WALK” or a symbol of a person walking when it is legally permitted and safe to cross the street or intersection.

Pedestrians who have started to cross the street or intersection when the “WALK” sign or walking person symbol appears should continue as quickly as possible to the other side of the street if the signal shifts to “DON’T WALK”.

Please note: At some intersections there is a button near the base of the pedestrian signal or stop light that must be pushed by the pedestrian to activate the pedestrian signal to show the “WALK” sign.

B. “Don’t Walk” Sign: Pedestrian signals indicate when it is not legally permissible nor safe to cross a street or intersection. When the pedestrian signal shows the words “DON’T WALK” or a symbol of a raised hand appears it is not legally permitted nor safe to begin crossing a street or intersection.

Driving in this lane is permitted

If flashing lane is for turning only, if solid direction of lane is changing

Driving is NOT Permitted in this lane

The above signals may appear as single or multiple units over each lane of the roadway, and are most often used when the direction of the flow of traffic changes during different hours of the day. Also indicates toll plaza lane open or closed. (See Chapter 8, page 66 for details on reversible lanes)

General Principles of Pavement Lane Markings

Lines and symbols on the roadway divide it into lanes, tell you when you may pass other vehicles or change lanes, which lanes to use for turns, define pedestrian walkways and show where you must stop for signs or traffic signals. Line colors tell you if you are on a one-way or two-way roadway.

- **Edge and Lane Lines** - Lines along the side of the road show you where the edge of the road is located. A solid white line indicates the right edge of the traffic lane on a road. A solid or broken yellow line indicates the left edge of traffic lanes going in your direction.

- If you ever find yourself with yellow to your right and white to your left, you are going the wrong way. Remember, on a divided highway **the side of the roadway to the left of the driver** and nearest the median, **always has a yellow line. The right side of the roadway will always have a white line.** It is a good way to confirm you are traveling the right direction when entering an unfamiliar interstate.

- **Yellow Lane Markings** - Lines separating traffic moving in opposite directions are yellow. Yellow lines are also used to mark a boundary or barrier of the travel path at the location of a particular hazard such as bridge supports, etc.

- **Broken yellow lines** mean that you **MAY cross the line to pass** if there is no oncoming traffic and it is safe to do so.
- **Two solid yellow lines** between lanes of traffic means you **MAY NOT cross the lines from either direction to pass** even if no oncoming traffic is in view. You may cross a solid yellow line to turn into a driveway or side road if it is safe to do so.
- **One solid yellow line and one broken yellow line:** Where there is both a solid and a broken yellow line

between opposing lanes of traffic, you **may not pass if the solid yellow line is on your side.** If the **broken yellow line is on your side, you are in the “passing zone”** and **may pass** if it is safe to do so. You must safely return to your side of the roadway **before** the passing zone ends.

- **White Lane Markings** - Multiple lanes of traffic that flow in the same direction are separated by white lane markings. You will find white lane markings on freeways, limited access highways, by-passes and one-way streets.

- **Broken white lines** between lanes of traffic mean you **MAY cross the lines to pass** or change lanes if it is safe to do so.
- **One solid white line** between lanes of traffic means that you should stay in your lane and **MAY NOT cross the line to pass** (unless an emergency situation requires you to change lanes).

- **Crosswalks** - White crosswalk lines are painted across a road to indicate pedestrian crossing areas. Crosswalks define the area where pedestrians may cross the roadway and can be at intersections or in the middle of a block. However, not all crosswalks are marked. You must yield the right-of-way to pedestrians who are in or are about to enter crosswalk or street.

- **Stop Lines** - White stop lines are painted on the pavement across traffic lanes, usually at intersections, to indicate the vehicle stopping position before traffic signs or signals. If the motorist is required to stop at the intersection the vehicle must be stopped behind this stop line (A). If no stop line is painted on the pavement all vehicles required to stop must: (B) Stop the vehicle before crossing the first line of the crosswalk (if crosswalk marked) and: (C) Stop the vehicle before the front bumper crosses the white edge line of the cross street in order to keep the vehicle from protruding out into the cross street traffic.

High Occupancy Vehicle (HOV) lanes are designated on highways by a diamond-shaped marking in the center of the lane. HOV lanes may also be special lanes separated by a barrier. During heavy traffic periods, HOV lanes are reserved for buses, vanpools, carpools and other high occupancy vehicles. Road signs indicate the minimum number of passengers a vehicle must carry to use the HOV lanes and the times that HOV restrictions are in effect.

In the accompanying three-lane diagram, the far left travel lane is reserved for buses or high-occupancy vehicles (HOVs), like those used in carpools.

Turn Lane Arrow

If you are traveling in a lane marked with a curved arrow and the word **ONLY**, you must turn in the direction of the arrow. If your lane is marked with both a curved and a straight arrow, you may turn in the direction of the arrow or you may go straight.

A white cross-buck and the letters RR are painted on the pavement as a warning marker for many railroad/highway grade crossings.

RULES OF THE ROAD

8

This chapter highlights key traffic laws. To a certain extent, safe driving principles related to the laws are also discussed here, however a more complete discussion of driving techniques will be found in Chapter 10.

Even on a short trip, you may be faced with many dangerous driving conditions. Statistics show that half of all vehicle crashes occur within 25 miles of home.

The rules of the road are those laws, regulations and practices that provide safe and efficient vehicle movement on the roadways. This includes such things as signaling, turning, passing and stopping.

Learn the traffic rules and follow them; be willing to yield to other drivers to avoid a crash; always watch carefully for advance warning and information signs; and be a courteous driver. This will help you avoid snap decisions.

Obeying Officers

You must obey traffic officers at all times. There will be times when one will instruct you to do something that ordinarily would be a violation of traffic regulations. The officer will do this only in case of an emergency when it is the only way to keep traffic flowing smoothly and safely. A common example: A police officer holding up traffic at a green light and permitting a funeral procession to continue through a red light.

In the United States, Canada, and most other countries, right hand traffic is the rule. This means we drive on the right side of the road, and bear right when going around traffic circles, roundabouts or town squares.

Coasting Prohibited

The driver of any motor vehicle traveling on a downgrade shall not coast with the transmission of the vehicle in neutral. Vehicles shall not coast with the clutch disengaged.

Use Of Headlights

- **Required Night Use:** Your car headlights must be turned on between 30 minutes after sunset and 30 minutes before sunrise.
- **Dimming of Headlights Required:** When your vehicle's high beam headlights are on, you must dim or lower the beam when an oncoming vehicle is within 500 feet (approximately the distance of one city block) or when you are following another vehicle within 500 feet. Dimming headlights when following other vehicles is a practical

safety step. The glare from your headlights in a rearview mirror can blind another driver.

- **Special Daylight / Inclement Weather Uses:** Tennessee law requires that headlights must be turned on.

1. at any other time when daylight is not good enough for you to see persons or vehicles clearly at a distance of 200 feet ahead, and
2. when rain, mist, snow, or other precipitation requires constant use of windshield wipers.

Headlights turned on during daylight hours will make your vehicle more visible to oncoming vehicles and pedestrians. Use headlights when driving at dusk. Even if you can see clearly, headlights help other drivers see you as much as they help you see them.

Get into the habit of turning your headlights on when you use your windshield wipers. And don't forget using headlights when wipers are needed is not just a good safety precaution — it's Tennessee law!

- **Limited Use of Parking Lights or Auxiliary-Fog Lights:**

The following procedures should be followed when using these type of lights -

1. The law requires a vehicle stopped or parked on a road or shoulder to have parking lights on when limited visibility conditions exist.
2. Do not drive a vehicle with only the parking lights on when driving at night or in inclement weather. The small size of parking lights may cause other drivers to think your vehicle is farther away than it actually is. Use of parking lights alone when there is limited visibility is not only unsafe it is against the law.
3. It is also illegal to have auxiliary lights or fog lights on by themselves or on at times when you are required to dim your headlights. These very bright lights make it difficult for oncoming drivers to see and the glare may reflect blindingly in the rearview mirror of vehicles you are following.

Daytime Running Lights - Some newer vehicles have headlights that are on anytime the vehicle is running. These lights make it easier for others to see the vehicle, even in daylight, thereby reducing the likelihood of collisions. However, they are not meant to replace the use of headlights as required by law (night driving, inclement weather, etc.).

Littering

Throwing papers, bottles, cans, or disposing of other material from vehicles are all forms of littering. Littering is not only an offense against state law, with maximum fine of up to \$500 and ten (10) days in jail. Littering is also an offense against common decency — something no respectable person would do.

Slow-Moving Vehicles

It is against the law for you to drive slower than the posted minimum speed under normal driving conditions. You may drive more slowly than the minimum speed if you are driving in bad weather, heavy traffic or on a bad road. If there is no posted minimum speed, it is still against the law for you to drive so slowly that you block traffic.

You are considered to be driving a SLOW-MOVING VEHICLE if you are traveling at a rate of speed that is ten (10) miles per hour or more below the lawful maximum speed. Whether you are operating a passenger vehicle or a commercial vehicle, if five (5) or more vehicles are lined up behind you, the law requires you to turn or pull off the roadway as soon as you can do so safely. Slow drivers who block other traffic cause many accidents. Remember, slower is not always safer.

Funeral Procession

In Tennessee it is a common and accepted practice for oncoming traffic to pull to the side of the roadway as a sign of respect when meeting a funeral procession.

Tennessee law instructs the following:

- Vehicles following a funeral procession on a two-lane highway may not attempt to pass such procession; and
- No operator of a vehicle shall drive between vehicles in a properly identified funeral procession except when directed to do so by a traffic officer.

The Basic Speed Rule

The speed at which you drive determines how much time you have to act or react and how long it takes to stop. The higher the speed you are traveling, the less time you have to spot hazards, judge the speed of other traffic and react to avoid the mistakes of other drivers.

The Basic Speed Rule (B.S.R.) is not a Tennessee law but it is a general safety principle. The B.S.R. does not set an exact speed limit; instead it teaches that the speed you may drive is limited by the current conditions. For example, the posted speed limit is 65 M.P.H., but if you are driving at night on a two-lane state highway, it's raining, or it's foggy, 65 M.P.H. is **TOO** fast for those conditions.

To obey the B.S.R., you need to think about your speed in relation to other traffic (including pedestrians and bicycles), the surface and width of the road, hazards at intersections, weather, visibility and any other conditions that could affect safety.

Principles of the Basic Speed rule

1. Your speed must be **careful and prudent** (using skill and good judgment).
2. Your speed must be **reasonable and proper**, not too fast and not too slow, for any conditions including:
 - Amount of Traffic - how many cars on the road
 - Speed of Traffic - how fast or slow it's moving
 - Whether pedestrians are present - *especially children in school zones or neighborhoods*
 - Surface of the road - rough or smooth, paved, gravel, etc.

- Width of the road - 1-lane, 2-lane, 4-lane
 - Structure of the road - straight, curving, bridges, narrow shoulders, etc.
 - Visibility - how far ahead you can see clearly
 - Weather conditions - rain, snow, ice, fog, etc.
 - Your own driving ability
3. You must not drive so slowly that you block, hinder, or interfere with other vehicles moving at normal speeds.
 4. Your speed must be adjusted to conditions so you can stop within a clear distance ahead.

If you drive at a speed that is unsafe for existing conditions in any area, even if you are driving slower than a designated or posted speed or a maximum limit, you are violating the basic rule.

Suppose you are driving in a line of downtown traffic and the car ahead of you stops suddenly. If you can't stop in time to avoid hitting that car from behind, you are either breaking the "B.S.R." - even if you were driving within the posted speed limit - or you are following too closely.

TRAVELER'S NOTE: *Even though the B.S.R. is not a part of Tennessee law, you should be aware that many states have incorporated the principles of the B.S.R. into their actual state laws. Be extra careful when traveling in other states as you might find yourself receiving a "speeding" ticket if you violate the principles of the B.S.R. (i.e. driving too fast for conditions) even when you weren't over the posted limit.*

TENNESSEE SPEED LAWS

Speed is a major contributing factor causing fatal accidents in Tennessee. It is closely followed by failure to yield right-of-way and driving left of the centerline.

Unless otherwise posted the speed limit on primary and secondary state and federal highway is 55 M.P.H.

When driving, you should adjust your speed to flow along with the speed at which other traffic is moving - provided the other traffic is traveling within the posted speed limit provided under Tennessee law! Studies have shown there is more chance of an accident when the difference increases above or below the average. Slow drivers are as likely to become involved in accidents as speeders. If most of the cars are traveling between 50 and 55 miles per hour, you are least likely to have an accident if you stay with that speed range.

INTERSTATE SPEED LIMITS: **The maximum speed set by Tennessee law for interstate highways is 70 M.P.H.** However this speed does not apply to ALL sections of the interstate highway and may be set as low as 55 M.P.H. in some larger urban areas where there is more traffic congestion. The maximum limit should be driven only in ideal driving conditions and you must reduce your speed when conditions require it. For example, you should reduce your speed for curves and when the roadway is slippery (during

rain, snow, icy conditions), or when it is foggy and difficult to see clearly down the road.

Rural - 70 M.P.H. is the speed that is posted on most of the rural sections of Tennessee interstate highways.

Urban - In the more congested urban or metropolitan areas of Tennessee interstates the limit is typically 55 M.P.H.

NOTE: It is unlawful for any person to drive a vehicle less than **55 m.p.h. in the left most lane** of any Interstate highway; unless traffic congestion and flow prevent safe driving at such speed. Also on the Interstates the minimum speed limit **in the right lane(s) is 45 M.P.H.** and under normal driving conditions all vehicles must travel at least this fast so they are not a hazard to other drivers. If the minimum posted speed limit is too fast for you, you should use another road.

Watch for speed limit changes! The state, counties and municipalities each have the authority to set speed limits for the roadways/highways under their control. Therefore you could see some sections of Interstate within some city limits set at 60 or 65 m.p.h.

Also on the secondary streets and highways these limits will change according to certain zones. Some residential roads or city streets may have limits as low as 25 or 35 M.P.H. at all times. Watch carefully and obey speed limit signs in business, residential, and school zones.

Speeding in School Zones: Speed limits in all school zones are regulated when children are going to or from the school or during a school recess hour. **Exceeding the school zone speed limit is by law considered to be reckless driving.** Penalty includes an **automatic 6 points** added to your driving record, which in turn automatically results in an advisory letter sent to you.

Speeding in Highway Work Zones: Highway work zones are those portions of a street or highway where construction, maintenance or utility work is being done to the road, its shoulders, or any other items related to the roadway. This includes work such as underground and overhead utility work, tree trimming, and survey activities. Highway work zones are easily recognized by the presence of orange signing and other orange traffic control devices, flashing lights on equipment, and workers dressed in highly visible clothing.

Highway workers are trained on how to set up safe zones with directional traffic signs and devices.

Motorists and pedestrians are responsible for knowing how to read and react to these directions. Paying attention, and driving cautiously and courteously are the most important steps to preventing crashes while driving through highway work zones.

TENNESSEE LAW MANDATES A MINIMUM FINE OF \$250 DOLLARS AND UP TO A MINIMUM FINE OF \$500 DOLLARS FOR VIOLATIONS OF THE SPEED LIMIT POSTED IN ACTIVE WORK ZONES.

Each year nearly a thousand people are killed and thousands are injured as a result of crashes in highway work zones across the nation. Some of these are highway workers, flaggers, or law enforcement officials. However, drivers, passengers, and pedestrians suffer over 80% of these fatalities and injuries. Many of these work zone crashes are preventable.

See Chapter 11 for a more detailed look at Work Zone Safety.

State figures for 2000 indicate that, 22 people died 1,379 were injured and there were another 2,576 cases of property damage in work zone accidents in Tennessee. Nationwide in 2001 nearly one thousand (962) people lost their lives in work zone accidents.

BRAKING, FOLLOWING AND STOPPING DISTANCES

Just as important as being aware of speed limits and the effects of speeding, drivers must know and understand the safe and proper braking procedures for vehicles. Along with this come the principles of allowing adequate following distances or "safety cushion" around your vehicle and the laws of required stops (signs, signals, railroad crossings, school bus, etc.).

1. BRAKING: You will encounter numerous driving situations, such as speed zone changes and merging traffic, that will require you to know proper braking techniques.

You should apply your brakes slowly and evenly by applying gradual pressure. Start braking early as a signal to the cars behind you. However, if you "ride your brakes" (keeping your foot resting or pressed down on the brake slightly), other drivers behind you will also slow down and eventually may not pay attention to your actual intent to stop or turn. When you really do stop, you may be rear-ended.

If you brake too strong or quickly, you could skid and lose control of your vehicle. You also make it harder for drivers behind you to stop without hitting your vehicle. As a general rule, if the car starts to skid, take your foot off the brake and turn the steering wheel in the direction of the skid; if you can do so without running off the road, hitting something, or steering into oncoming traffic.

(More on skids and skid recovery in Chapter 10.)

- With a standard transmission, you can use your gearshift to slow down when you're approaching a stop sign or signal. First, flash your brake lights to signal any cars behind you, then shift down to a lower gear.
- Many of today's cars are equipped with anti-lock braking systems (ABS), however few drivers know how to use them properly. *Read the instructions in your car's owner's manual to learn the safe and proper operation of ABS.*

A general overview of ABS braking procedures includes:

- When slowing or stopping apply **firm, steady pressure to the brake pedal.** (*Never pump the pedal with ABS*)
- If you are braking to avoid an emergency or accident **gradually steer the car** around any obstacles. (*ABS was designed to prevent vehicles from locking wheels and to allow drivers to steer when skidding. Drivers unfamiliar with being able to steer during a skid may over steer and risk running off the road. Be careful to turn the steering wheel just enough to avoid obstacles.*)
- **Release pressure on the brake pedal.** (*Do not release the steady pressure off the brake pedal until you have slowed to the speed you desire or stopped, otherwise you will disengage the ABS.*)
- **Resume driving normally.**

Regardless of the type of brake system your vehicle is equipped with you need to always be prepared to brake unexpectedly. there are some areas where drivers should be especially aware of this need including:

- When driving next to parked cars
- When approaching any type of intersection
- When approaching traffic signals and crosswalks
- When driving in a school zone or residential area
- When seeing brake lights of other cars
- When driving in heavy, slow moving traffic

Drivers should be able to distinguish situations, like those above, when the brake needs to be covered in preparation for use. "Covering the brake" means the driver's foot needs to be hovering over the brake or between the brake and gas pedals for quicker response time. You should not confuse this practice with "riding the brake." Riding the brake not only adds much wear and tear on your vehicle brake system, but it also gives other drivers the false impression that a stop is imminent. *However, covering the brake is often prudent and a safe driving practice, riding the brake is not a safe practice.*

2. FOLLOWING DISTANCES: Obeying the speed limit laws and knowing proper braking procedures must be accompanied by allowing for a reasonable and safe

following distance between your car and other vehicles. This section will discuss principles that you can use to assist in determining safe following distances.

Tennessee law states: ***"The driver of a motor vehicle shall not follow another vehicle more closely than is reasonable and prudent, having due regard for the speed of such vehicles and the traffic upon and the condition of the highway."***

When another driver makes a mistake, you need time to react. Give yourself this time by keeping

a "space cushion" (see **Chapter 10 for more details on this topic**) around your vehicle. This space cushion will give you room to brake or maneuver to avoid hazards when needed. Good drivers keep this safe following distance or space cushion to have a better view of the road. The more space you allow between your car and the car ahead, the more time you will have to see and anticipate traffic hazards, or accidents down the road.

Many drivers don't see as well as they should because they follow too closely (tailgating), and the vehicle ahead of them blocks their view of traffic and road conditions. Rear-end crashes are very common and most of these crashes are caused by drivers who are "tailgating". They have failed to allow an adequate space cushion and find themselves unable to stop before hitting the vehicle ahead that suddenly stops.

Two Second Rule: Nationally, safety agencies and driver education programs have tried to define a safe following distance for drivers to maintain. This has ranged from a 2 to a 4 second following distance. To share the road safely, make sure you are a safe distance from the vehicle in front of you. Use the following tips to determine if you following too closely:

- As the car ahead of you passes a stationary point on the road (a sign post, driveway, utility pole, etc.) count the seconds it takes you to reach the same spot. (*In the illustration at right and below "you" are driving the red vehicle.*)
- Count to yourself "one-thousand-one, one-thousand-two," etc. You should NOT reach that same point on the road before you finish counting at least "one-thousand-two". If you do you are definitely following too close.
 - You should slow down slightly to increase the space between you and the other vehicle. Find another spot

to check your new following distance. Repeat this exercise until you are following no closer than two seconds.

This principle will hold true at any speed on State and U.S. Highways with moderate speed limits. However, during inclement weather, Interstate Highway driving at higher speeds and night driving the 2-second rule should be increased to allow for limited visibility. A minimum of 4 seconds should allow for better reaction time and a safer space cushion under these conditions.

(See Chapter 10 for more discussion of situations requiring the application of a larger following space.)

3. STOPPING DISTANCES: Be alert so that you know when you will have to stop well ahead of time. Stopping suddenly is dangerous and usual points to a driver who was not paying attention, speeding or not allowing a safe following distance. Try to avoid panic stops by seeing events well in advance. By slowing down or changing lanes, you may not have to stop at all, and if you do, it can be a more gradual and safer stop. As a rule it is best to never stop on the road, unless necessary for safety or to obey a law (stop sign, etc.).

There are three steps in stopping your vehicle:

- Driver perception time (length of time it takes to see and recognize a dangerous situation).
- Driver reaction time (time from perception of danger to start of braking - average is 3/4 second noted in blue section of charts below).
- Braking ability includes the type and condition of vehicle brakes as well as vehicle speed.

PERCEPTION, REACTION AND BRAKING TIME		
Step	Time	Explanation
Perception	About .50 second	See/hear danger
Reaction	About .66 second	Brain tells foot to brake
Braking/ Stopping	Varies by speed	Foot presses brake pedal until car stops

Stopping distance can vary widely due to many factors:

- Type and condition of the road/pavement.
- Type and condition of vehicle tires.
- Vehicle design and condition of the shock absorbers.
- Vehicle weight when loaded or towing.

You need to know how long it takes to stop any vehicle you drive. Vehicles cannot stop all at once. It takes long distances to come to a controlled, safe and complete stop.

It takes longer to stop than most people realize. Suppose you're driving on the interstate at night at the maximum limit of 70 M.P.H. A deer suddenly appears in your headlights. Will you be able to stop in time? It will take 1.16 seconds for you to see the deer and move your foot to the brake. Before you even start to brake, you will have traveled 128 feet. If you're on a good road in good weather, the braking distance at 70 M.P.H. will be 290 feet. Your total stopping distance has now reached 418 feet nearly the length of one-and-a-half football fields!

The chart in the previous column shows "average" stopping distances (stopping distances are based on tests made by the Federal Highway Administration) for vehicles under ideal conditions. *Note this chart does not include the distance you will travel in the 1/2 second of time required for perception of the hazard.* According to the National Safety Council, a lightweight passenger car traveling at 50 M.P.H. can stop in about 200 feet. The distance required to stop your vehicle is important in helping you choose a safe driving speed. These charts can be used as a rough guide, but your actual stopping distance will depend upon many of the items noted in the above list.

STOPS REQUIRED BY LAW

Tennessee law states: ***Every driver of a vehicle approaching a stop sign shall stop before entering the nearest side of a crosswalk, or stop at a clearly marked stop line, but if neither are present, then at a point nearest the intersecting roadway where the driver has a view of approaching traffic on the intersecting roadway before entering the actual intersection.*** Tennessee Code defines "stop" as "**complete cessation of movement**".

You are responsible for knowing the proper stopping procedures required by this law. At stop signs and right-turn-on-red intersections, come to a COMPLETE stop (not a rolling stop) and go only when the traffic is clear. The approaching traffic should not have to slow down or change lanes for your vehicle. You should:

- Come to a full and complete stop at the stop sign (or traffic signal). Often a wide white stop line will be painted on the pavement in line with the sign. You must stop your vehicle behind this line.
- If such pavement marking is not present you should stop with the front of your vehicle even with the stop sign's placement on the roadside.
- If you can't see whether the crossing traffic is clear, edge up slowly until you can clearly see the traffic crossing from both directions.
- If the intersection where the stop sign/traffic signal is placed has a crosswalk for pedestrians marked on the pavement you must stop before the front of your vehicle reaches the nearest white line marking the border of the crosswalk.

- If there are pedestrians in the crosswalk or about to enter the crosswalk you must wait for them to cross before you proceed.
- Once the crosswalk is clear you may slowly edge forward to check traffic before crossing the intersection or entering the roadway.

- When stopping behind another vehicle already stopped at the intersection, make sure you allow adequate “gap” space between the vehicles so you are not “tailgating”.
- A basic rule of thumb is that you should be able to see the license plate and/or the other vehicle’s back tire where it meets the pavement.
- This “gap” provides a safety zone in the event the other vehicle rolls back slightly or stalls. If the vehicle stalls you would still be able to maneuver around it when safe. It also provides you with an evasive “out” in the event of an emergency such as another vehicle approaching from behind so fast that you may need to move to avoid a rear-end collision.
- Once the vehicle in front of you has moved on through the intersection you may move forward to the stop line. Remember you still must bring your vehicle to a FULL STOP at the stop line.
- A complete stop is required at a flashing red traffic light, just as with a stop sign.
- After you have stopped, if there is no traffic from the right or left you may proceed. When there is traffic on the crossroad (right to left) and/or oncoming traffic (heading toward you) from the other side of the intersection you must following the right-of-way procedures. (Right-of-Way rules are discussed in depth later in this Chapter.)
- You must stop completely when directed to stop by a flag person at a road construction site or by a police officer directing you to stop in any situation.

Rolling Stops: Rolling stops or “California rolls” are dangerous and illegal. A rolling stop occurs when the driver only slows down for a stop sign or traffic signal and proceeds through the intersection or turn without ever bringing the vehicle to a full and complete stop as required by law. Most law enforcement officers and driver education instructors agree that a vehicle has not come to a complete stop until the driver feels the car lurch after all forward motion has ceased. *You should remember that rolling stops are grounds for receiving a traffic ticket AND for failing the driver examination road test.* The following are also excellent reasons you should not get in the habit of rolling stop signs:

- A driver may not see a child or other pedestrian who assumes the car will follow the law and come to a complete stop.
- There is a better chance of seeing possible hazards

because the driver who comes to a full stop has a longer observation period of the intersection.

- If two drivers are traveling at right angles to one-another, and both fail to stop, a collision is almost a certainty.
- Police and insurance companies will hold the driver who fails to stop completely liable in the event of an accident, possibly resulting in fines, loss of license, increased insurance rates or loss of insurance coverage.

Stopping for Railroad Crossings

Railroad crossings have pavement markings that include a large cross buck (“X”), the letters “RR”, a no-passing zone stripe and a stop line. Railroad crossing collisions should not happen. When they do, it usually means drivers are not paying attention to signs, pavement markings, and other warnings that tell when a train is coming.

Tennessee law states: *“Whenever any person driving a vehicle approaches a railroad grade crossing,...the driver of such vehicle shall stop within fifty feet (50’) but not less than fifteen feet (15’) from the nearest rail of such railroad, and shall not proceed until that driver can do so safely. The foregoing requirements shall apply when:*

- 1) *A clearly visible electric or mechanical signal device gives warning of the immediate approach of a railroad train;*
- 2) *A crossing gate is lowered or when a human flagger gives a signal of the approach or passage of a train;*
- 3) *A railroad train approaching within approximately 1,500 feet of the highway crossing emits a signal audible from such distance and such railroad train, by reason of its speed or nearness to such highway crossing, is an immediate hazard; and*
- 4) *An approaching railroad train is plainly visible and is in hazardous proximity to such highway crossing. No person shall drive any vehicle through, around or under any crossing gate or barrier at the railroad crossing while such gate or barrier is closed or is being opened or closed.”*

Every motor vehicle should be driven at a rate of speed that will permit the vehicle to be stopped before reaching the nearest rail of a railroad crossing. The vehicle should not be driven over the crossing until all railroad tracks are completely clear of train traffic. Violations of railroad signals or signs carry the same penalties as violations of other traffic control devices.

CERTAIN VEHICLES REQUIRED TO STOP AT ALL RAILROAD CROSSINGS: Tennessee law also states that certain vehicles must stop at all railroad grade/highway crossings whether or not any signs or signals are activated at the time the vehicle approaches the crossing. As a driver you must be aware of this requirement so you will be prepared for meeting or following these vehicles when they have stopped at the crossing.

The vehicles listed below are required by law to stop before crossing ANY railroad grade crossing:

- Church or School buses regardless of whether such school bus is carrying any school child at the time of crossing.
- Common carriers such as taxis or other vehicles transporting passengers for hire.
- Vehicles transporting flammables, explosives or other dangerous articles as cargo or part of a cargo.

The drivers of such vehicles must first stop the vehicle within the required distance (within 50' to 15') of the track, listen and look in each direction for approaching trains. When it is safe to do so, the driver may proceed across the tracks in a gear that permits the vehicle to complete the crossing of the track(s) without a change of gears.

Buses at a railroad crossing should pull to the right. This side movement of the vehicle along with its stoplights is a very clear signal, day or night, that the vehicle is preparing to stop. You must be alert to this type of movement by buses. Also tanker trucks or other vehicles required to stop at all railroad tracks will generally signal such stop by displaying the emergency flashers of the vehicle to alert other drivers to the impending stop.

Please see Chapter 11 for more detailed discussion on "Sharing the Road with Trains".

The School Bus Stop Law

Meeting A School Bus — The driver of any vehicle approaching from the front, a school bus or church bus on which the red stop warning signal lights are flashing, should reduce the speed of the vehicle and bring the vehicle to a complete stop while the bus stop signal arm is extended. The vehicle must remain stopped until the stop arm is retracted and the bus resumes motion.

Overtaking A School Bus — The driver of any vehicle approaching a school bus or church bus from the rear shall *not pass the bus* when red stop warning signal lights are flashing and must bring the vehicle to a complete stop when the bus is stopped. The vehicle must remain stopped until the stop arm is retracted and the bus resumes motion.

School Bus Warning Lights

YELLOW FLASHING:

When the yellow lights on the front and back of the bus are flashing the bus is preparing to stop to load or unload children. Motorists should slow down and prepare to stop their vehicles.

RED FLASHING:

When the red lights are flashing and the stop arm is extended this indicates that the bus **HAS** stopped and that children are now getting on or off the bus. Motorists must stop their cars and wait until the red flashing lights are turned off, the stop arm is withdrawn, and the bus begins moving before they start driving again.

IT IS ILLEGAL IN ALL 50 STATES TO PASS A SCHOOL BUS THAT HAS STOPPED TO LOAD OR UNLOAD STUDENTS.

Never pass on the right side of the bus, as this is where the children enter or exit. This is illegal and can have tragic results. You must stop and remain stopped until:

- The bus has started moving, OR
- The driver motions for you to proceed, OR
- the red flashing lights go off and/or the stop arm is pulled back.

When a school bus is stopped at an intersection to load and unload children, drivers from ALL directions are required to stop until the bus resumes motion. (As shown by the red vehicles in the diagram at left.)

When driving on a highway with separate roadways for traffic in opposite directions, divided by median space or barrier not suitable for vehicular traffic, the driver need not stop but should proceed with caution.

Note: A turn lane in the middle of a four-lane highway is NOT considered a barrier, but a fifth lane that is suitable for vehicular traffic, drivers meeting a stopped school bus on this type of road would be required to stop in both directions.

THE OPERATOR OF ANY MOTOR VEHICLE THAT FAILS TO STOP FOR A SCHOOL BUS AS DESCRIBED ABOVE SHALL BE GUILTY OF A MISDEMEANOR, AND UPON CONVICTION SHALL BE PUNISHED BY A FINE NOT TO EXCEED FIFTY DOLLARS (\$50.00) OR BY IMPRISONMENT IN THE COUNTY JAIL NOT TO EXCEED NINETY (90) DAYS, OR BOTH SUCH FINE AND IMPRISONMENT AT THE DISCRETION OF THE COURT.

See Chapter 11 for more School Zone Safety Tips.

Stopping for Police Vehicles

Police vehicles which are attempting to stop drivers will do so by means of a visual, flashing blue or flashing blue and red lights, or audible signal. Remember, a police officer never knows what to expect when stopping a driver. Don't let your emotions or sudden unexplained movements (or those of your passengers) introduce an element of tension and anxiety into the occurrence. A police officer may be more likely to listen to what you have to say and less likely to feel threatened by you (or your passengers) if you follow these guidelines.

- Drive as close as is safely practical to the right-hand edge or curb of the road, clear of any intersection, stop and park.
- Limit the movements of the driver and/or passengers while stopping your vehicle
- Drivers should keep their hands on the steering wheel and passengers should keep their hands in plain view. **Drivers should advise officers if they have a handgun permit and if they are armed.**
- Provide your driver license and/or vehicle registration when requested.
- Keep all vehicle doors closed and remain in the vehicle unless requested to get out.
- If stop is made after dark, turn on the vehicle's interior light before the officer approaches
- If enforcement action is taken against you that you disagree with, do not argue with the officer at the scene. Traffic violations and traffic crimes charged against you are decided in court.
- If you find yourself being directed to pull over and stop by someone in an UNMARKED police car it is acceptable for you to drive a *short distance to the nearest* area where there are other people, such as the next business parking lot or the next exit if on the Interstate. This is especially prudent if traveling at night and/or alone.

INTERSECTIONS

Now that you have studied the effects of speed, following distances, stopping distances and legally required stops, it is time to look at the complex issue of Intersections. This includes rules for the right-of-way, pedestrians, right turns, left turns and turn signals.

Intersections are places where traffic merges or crosses. They Include:

- cross streets,
- side streets,
- driveways, and
- shopping center or parking lot entrances

More crashes happen at intersections than any other place. Intersections constitute a very small part of rural and urban street/highway systems, yet they are implicated in 40% of all motor vehicle crashes and more than 9,000 deaths per year (1998 NHTSA data). Be very careful when approaching any intersection or driveway. Never assume another driver will yield the right-of-way to you. Always be prepared to stop.

APPROACHING INTERSECTIONS SAFELY

Traffic checks are the process of looking frequently and carefully for vehicle traffic approaching your car from each direction. Traffic checks are especially important when merging or changing lanes and particularly when approaching and crossing intersections.

- **Look:** Look both ways as you near an intersection. Before you enter an intersection continue checking traffic from both the left and right for approaching vehicles and/or crossing pedestrians.

1. Look first to the left to make sure cross traffic is yielding the right-of-way, then look for traffic from the right. If stopped, look both left and right just before you start moving. Look across the intersection before you start to move to make sure the path is clear through the intersection when driving straight through.
 2. As you enter the intersection, check again for unusual or unexpected actions to the left and right.
 3. It is also important to watch for vehicle traffic from the front (oncoming traffic) and rear (approaching/overtaking traffic) of your vehicle at intersections. Be especially aware of vehicles behind you. If the light changes and/or you encounter a vehicle violating the right-of-way, causing you to need to stop suddenly will the vehicle behind be able to stop? It is unfortunately not uncommon for drivers to run red lights or stop signs which could result in you being involved in a head-on or rear-end collision.
- **Control Speed:** Be prepared to brake or stop unexpectedly at intersections if the above traffic checks alert you to a possible hazard. You should slow down **before** reaching the intersection, drive at your slowest speed just before entering the intersection and gradually increase your speed safely as you cross the intersection.
 - **Use Proper Lane:** You should be in the proper lane for the direction you intend to travel **before** you reach the intersection. Do not make last minute lane changes as you start through an intersection. Do NOT pass a vehicle in an intersection.

- **Safety:** Most importantly you must know and obey
 1. the proper right-of-way procedures for vehicles and pedestrians at intersections,
 2. the purpose and meaning of pavement markings.
 3. the purpose and meaning of traffic signals, stop or yield signs posted at intersections,
 4. proper lane usage and speed at intersections,
 5. proper use of you own vehicle turn signals

THE RIGHT-OF-WAY PROCEDURES

Vehicles or pedestrians are likely to meet one another where there are no signs or lights to control traffic. There are rules on who must yield the right-of-way. These rules tell who goes first and who must wait in different traffic situations. However if another driver doesn't follow these rules, give him the right-of-way. In all driving situations think of the right-of-way as something to be given, not taken. All drivers should know and understand the following rules which determine the right-of-way.

You Must Not Insist On The Right-Of-Way

The law does not really give anyone the right-of-way. It only says who must yield it. A driver must do everything possible to avoid a traffic accident. Rules for the most common situations drivers encounter include:

1. Yielding to Pedestrians crossing the road or your path of travel:

- When pedestrians are in a crosswalk (marked or unmarked) and there are no traffic lights or police at the intersection.
- When your car is turning a corner and pedestrians are crossing with the light.

A. Vehicles must stop if a pedestrian or bicyclist is in their half of the roadway.

2 lanes on right must stop all others can go.

B. Vehicles must stop if a pedestrian or bicyclist is within one lane of their half of the roadway.

All lanes must stop for the pedestrian.

C. Once the pedestrian or bicyclist is beyond one lane of their half of the roadway, the vehicles may go.

2 lanes on right may go all others must remain stopped.

- When your vehicle crosses a sidewalk when entering or exiting a driveway, alley or parking lot. It is illegal to drive on a sidewalk except to cross it.

- When a blind pedestrian using a guide dog or carrying a white cane with red tip is crossing any portion of the road way, even if not at an intersection or crosswalk. Do not use your horn as it could startle the blind pedestrian. If you see anyone in the roadway with a dog guide or a white cane, stop at least ten feet away until the person is off the roadway.

- Persons operating motorized wheelchairs on a sidewalk or roadway are also granted the same right-of-way as pedestrians.
- You must yield to children playing in the streets. In crowded downtown areas and in suburban residential neighborhoods, children play in the streets because there may not be parks or playgrounds nearby. Even though they have been told not to run into the street, children won't always put safety ahead of a runaway puppy or a bouncing ball. Children on bicycles can easily forget to slow down before entering an intersection or to signal and look behind before they turn. You are responsible for driving with extreme caution when children are present. Slow down near schools, playgrounds and residential areas.

2. Yielding to Oncoming Traffic: When meeting other traffic at intersections or when entering the roadway make sure the other driver sees you. Make eye contact whenever possible. Drive cautiously and defensively. Drive friendly. Remember the right-of-way is something to be given, not taken.

- When you are starting from a parked position you should wait for all moving traffic to pass.

- When turning left you must wait for oncoming traffic going straight ahead or turning right.

- When you are entering a main road from a driveway, alley, parking lot or roadside you must yield to all vehicles already on the main road. (The blue car in the diagram at right must yield the right-of-way.)

- When you are entering a roundabout, traffic circle or rotary (also known as "town squares") you must yield to traffic already in the roundabout.
- When approaching a MERGE onto a busy highway or Interstate you must increase or decrease speed as needed to avoid an accident and yield the right-of-way if necessary to the oncoming traffic.

- When approaching a fire station you should yield to any emergency vehicle that is about to back into, or is already in the process of backing into, the driveway entrance to the station.

3. Yielding at Intersections: The right-of-way should be determined by each driver before entering an intersection. If you have the right-of-way and another driver yields it to you, proceed immediately. However YOU must yield:

- When oncoming vehicles (including bicycles) are proceeding straight or making a right turn you must yield the right-of-way to those vehicles.
- At intersections where YIELD signs are posted the driver must slow down or stop to avoid an accident with oncoming traffic
- To any vehicles that are already in the intersection even if you have the green traffic light. (The red vehicle in the diagram at right must yield to the green vehicle.)
- At “T” intersections where one road “dead-ends” into another main crossing roadway, the vehicles on the road ending must yield to oncoming traffic from both directions on the main road.

- When turning left at intersections you must yield to any oncoming vehicle proceeding straight or turning right, unless you have a traffic light where your left turn is on a protected green arrow. (The red vehicle shown at right must yield.)
- At intersections marked as 4-way or All way stops, the vehicle reaching the intersection first gets to go first (of course, ALL vehicles must stop). If more than one vehicle arrives at the same time, yield the right of way to the vehicle on your right.
- Where roads cross and there are no stop signs or signals, wait for any vehicle coming at the same time on your right.
- You should not enter an intersection unless you can get through it without having to stop. You should wait until traffic in front of you clears so that you are not blocking the intersection. If your vehicle is left blocking an intersection (with or without a traffic signal) it prevents other traffic from proceeding and you could be ticketed for this type of action.

4. Yielding to Emergency Vehicles and Transit Buses

- You must yield the right-of-way to a police vehicle, fire engine, ambulance or other emergency vehicle using a siren, air horn or a red or blue flashing light.

- **It is against the law for an unauthorized private vehicle to have a blue flashing emergency light or combination of blue and red flashing emergency lights installed, maintained or visibly exhibited on the vehicle in any manner.**

- **Following Fire Apparatus:** The driver of any vehicle, other than one on official business, shall not follow any fire apparatus traveling in response to a fire alarm or drive into or park any vehicle within the block where the fire apparatus has stopped in response to a fire alarm. No vehicle shall be driven over any unprotected hose of a fire department without the consent of the department official in command.
- Tennessee law requires that upon the *immediate approach of an emergency vehicle all traffic meeting or being overtaken must YIELD the right-of-way and shall immediately drive to a position parallel to, and as close as possible to the right hand edge or curb of the roadway clear of any intersection and stop. Remain in that stopped position until the emergency vehicle has passed or you have been directed to move by a police officer. Proceed with caution. There may be other emergency vehicles coming.*
 - A If you are in an intersection, drive on through the intersection before you pull over otherwise you may inadvertently block the emergency vehicle's path through the intersection.
 - B Do not pull over to the right where you will be blocking a side road or driveway. The emergency vehicle may need to turn into that road or driveway to get to the incident scene.
 - C If the traffic light is red, stay where you are. If the light turns green before the emergency vehicle has passed do NOT proceed on green - wait until the emergency vehicle has passed or turned onto a different street.
 - D When yielding to emergency vehicles you should get in the habit of turning down the volume on the radio (if on) so that you may hear any instructions or directions given out over the emergency vehicle's

loudspeaker. Your immediate reaction to such directions may be critically needed.

- You must yield the right-of-way to any transit vehicle (metro bus) that has signaled and is pulling back onto the roadway from a bus stop. Generally this occurs on urban roadways in areas usually marked by “bus stop” signs or benches. However occasionally you may encounter cross-country commercial buses signaling to re-enter traffic after allowing passengers to disembark on rural roadways in smaller communities and towns.

A You are not required to stop for, nor forbidden to pass, these transit buses when they are stopped for passenger pick-up or drop-off as you would be for a school bus in the same situation. (See “The School Bus Stop Law” section of this manual for complete details.)

B However you should be extremely cautious near such stopped buses and be watchful for passengers (including elderly and children) who may be attempting to cross the road in these areas.

TURNING

The most common faults when making turns are failing to signal, not signaling long enough, failing to search for hazards, turning from the wrong lane, and failing to turn properly. Rules for turning apply at all locations, even driveways and alleys, not just at intersections. ***The first rule of turning is to turn from the closest lane in the direction you are traveling to the closest legal lane in the direction you want to go.*** The law designates which lanes and positions you must use when turning, and the required signaling distances for such turns. This section will expand on those rules and help you to learn the proper procedures for signaling and making safe turns.

1. SIGNALING A TURN: Before making any turn, whether the turn is into another roadway, a parking lot, another traffic lane, or leaving a parked position, it is extremely important that you signal. Other drivers expect you to keep traveling the path of the roadway and using

the lane in which your vehicle is positioned. Your signal lets other drivers, cyclists, and pedestrians know your intentions to make a change in your vehicle's path of travel and give them time to react to your intended movements. However signaling does NOT give you the

right away.

You should always use your turn signals before you:

- Change lanes or make any movement of your vehicle to the right or left
- Turn at an intersection or into a driveway, alley or parking lot
- Enter or exit the interstate or other controlled access roadway
- Pull away from a parked position along the curb
- Pull over to the curb or roadside
- Slow down or stop your vehicle suddenly

You may use either your vehicle turn signal lights or hand and arm signals. Make sure your signals can be easily seen by others. The illustration below shows the standard positions for hand and arm signals. Extend your hand and arm well out of the car window and signal in plenty of time.

A. Hand Signal Tips:

- When you use hand signals, bring your arm in during the actual turn to keep control of the steering wheel.
- During non-daylight hours, hand and arm signals are usually not visible except in well lighted areas.
- Hand signals should also be used when the sun is shining brightly and may make your turn signal light harder for other drivers to see easily.
- In heavy traffic a hand signal may be seen by drivers who are several cars back and the line of cars following you could obscure their view of your turn signal light.

B. Electrical Turn Signal Tips:

- Check your vehicle's turn signals often to be sure your signal lights are working properly.
- Be sure that your turn signal lights (front and rear) are clean and free from dust, dirt, ice or snow.
- When signaling a stop, pump your brakes a few times to attract attention.
- Be sure to turn off your turn signal light after you use it.

YOUR UNINTENDED SIGNAL STILL MEANS “TURN” TO THE OTHER DRIVERS. You might tempt other drivers to pull out in front of you.

You should not assume that all drivers will respond to your signaled intentions. Also be aware that some drivers will not signal their intentions. Therefore, maintain control of your vehicle at all times and “drive defensively”. Your signal helps

other drivers plan ahead. A surprise move often results in accidents. As a good driver you should be alert and emphasize your intentions to turn by giving the proper signal or signals.

- At least 50 feet before the turn, you must turn on their flashing directional signals.
- You should use your turn signals **ONLY** to indicate when **YOU** plan to turn or change lanes.
- If you are parked at a curb or roadside and about to re-enter traffic, use a signal long enough to alert oncoming traffic that you are moving from the parked position back into the traffic lane.
- You should look back, using your rear-view mirrors.
- You must get into the correct lane. This is most important, for now, your car becomes a big signal to help indicate your intention to turn.
- If you plan to turn beyond an intersection, *do not signal until you are in the intersection*. If you signal earlier, another driver may think you intend to turn at the intersection and might pull into your path.
- You should get in the habit of signaling every time you change direction. Signal even if you do not see anyone else around. *It is the car you do not see, that is the most dangerous.*
- When you slow down and your brake lights flash as a

Proper signaling is a key to safe driving. Failing to signal is dangerous and inconsiderate. Communicating while driving is a must. Safe drivers are good communicators. They are always aware of surrounding conditions and readily communicate their intentions to other drivers by using their signals at ALL times.

signal. slowing down, itself, acts as a signal.

C. You should NOT use your turn signals:

- To signal a driver behind you to come around to pass your vehicle.
- To relay the turn intentions of vehicles ahead of you to those drivers behind your vehicle. This is misleading to other drivers and your brake lights will be sufficient to warn those behind you to slow down. If you see someone ahead signaling they are about to turn, do NOT turn on your turn signals unless you also plan to turn.

2. MARKING TURNS: Before making a turn, be sure you can do so safely. Check traffic ahead, behind and to the side. Become familiar with the following Do's and Don'ts:

DO:

- As discussed above always use your turn signal at least 50 feet before the turn or lane change.
- Make thorough traffic checks, looking behind and on both sides to see where other vehicles are, so you can change lanes and make the turn safely.
- Move into the correct lane as soon as possible. The faster the traffic is moving, the sooner you should move

into the proper lane. Where there are no signs or lane markings to control turning, you should turn from the lane that is closest to the direction you want to go and turn into the lane closest to the one you came from. this way you cross the fewest lanes. Go from one lane to the other as directly as possible without crossing lane lines of interfering with the traffic.

- Reduce your speed and turn smoothly. If you are going too fast to make the turn safely, slow down before you reach the stop line or crosswalk. Select the proper gear before entering the intersection and accelerate slightly through the turn.
- As you turn, make sure to check for pedestrians, cyclist and other traffic as you turn. Make the turn correctly staying in the proper lane and maintaining a safe speed.
- Finish the turn in the proper lane. Once you have completed your turn, you can change to another lane if you need to.

DON'T:

- Don't turn unless the turn is permitted and can be made safely; be aware of signs prohibiting right or left turns at certain locations.
- Don't try to turn from the wrong lane. If you aren't in the proper lane, drive to the next intersection and make the turn from the proper lane there. Circle back if you have to, this may take you some extra time and miles however it will be much better than causing an accident, injury or worse.
- Don't "swing wide" or "cut the corner" when making your turns. don't turn too short so as to cut corners on left turns or run over the curb on right turns. Turning too wide or too late, straddling lanes, or turning into the wrong side of the street will result in not being able to turn into the correct lane. Always follow the white lines in intersections using multiple turn lanes.
- Don't turn your wheels in the direction of the turn while waiting for oncoming traffic to pass. If you are hit from the rear while your wheels are turned, the impact can push you right into oncoming traffic. Keep your vehicles wheels straight until you begin the turn. Wait until you are sure you can complete the turn before turning the wheels.
- Don't enter the intersection if traffic ahead may keep you from completing the turn before the traffic light changes. Stay behind the stop line or crosswalk until you can fully complete the turn without the risk of blocking the traffic flow.
- Don't brake or depress the clutch while actually turning.
- Don't shift gears in the intersection (if you stall you could cause an accident and/or block the intersection to other traffic).

3. LEFT TURNS: You should study the above diagram showing the five basic steps in making left turns from routine 2-way streets to 2-way streets.

When you are meeting another driver at an intersection

HOW TO MAKE A LEFT TURN

There are five steps in making a left turn. Take care to keep close to the centerline, but don't cross it.

and both of you want to turn left, each will turn to the left of the other. Leave from the left lane or as close to the yellow center line as possible and enter in the left lane or as close to the yellow center line as shown in the diagrams below.

A. From A Two-Way Street Onto A Two-Way Street

Remember these tips:

- Reduce speed and get into the lane just to the right of the center line well ahead of time.
- Signal your intentions for at least 50 feet and approach the turn with your left wheels as close to the center line as possible. *Failure to signal is dangerous, inconsiderate and illegal. Your signal makes it possible for other cars to complete a turn.*
- Look out of your left window for pedestrians and other traffic in your turn path. Yield to any oncoming cars or pedestrians.
- Begin your turn when you enter the

intersection. Keep your wheels straight until you can turn; turn just before the imaginary center point in the intersection. Drive just to the right of the center line of the street you're entering and be sure to turn into the first lane past the center line. This avoids conflict with other traffic making either right or left turns. Never turn "wide" into the right lane. *The right lane will be used by any oncoming vehicles turning right.*

- If the intersection has a lane signed or marked for making left turns, do not make this turn from any other lane. At some areas you may make turns from more than one lane. Signs and pavement markings will tell you if this is allowed. If there are multiple lanes you must keep your vehicle in the lane you start from throughout the turn. Be alert for signs that may also PROHIBIT left turns at some intersections.
- Pay close attention to the traffic light cycle. If the light turns yellow while you are waiting for oncoming vehicles to clear the intersection, **do NOT proceed into the intersection.**

B. From A Two-Way Street Onto A One-Way Street

Keep in mind the following differences when turning on one-way streets:

- When making left-hand turns, be alert for "one-way" street signs on traffic lights, posts and stop signs.
- Center lines on two-way streets are yellow.
- Center lines on one-way streets are white.
- Make the proper "two-way" approach next to the center line.
- Turn sharply into the FIRST lane. Remember you are turning onto a one-way street so both lanes will be traveling in the same direction and you should turn into the first lane closest to the left curb.

C. From A One-Way Street Onto A One-Way Street

- Make your approach in the traffic lane furthestmost to the left curb of the street.
- Turn sharply into the first lane on the left side of the one-way street. **DO NOT TURN WIDE.**
- At intersections that are not marked for "No Turns on Red" you may make a left turn on red when turning from a one-way street onto a one-way street. You must come to a complete stop at the light prior to making the turn, same as right turns on red.

D. From A One-Way Street Onto A Two-Way Street

- Make your approach in the traffic lane furthestmost to the left curb of the street.
- Don't start your turn at the crosswalk. Drive into the intersection and then turn sharply into the first lane to the right of the yellow lane on the two-way street.
- If the two-way street has multiple lanes you may move into the right lane **ONLY AFTER** giving the proper turn signal and checking traffic to your right.
- You can **NOT** make this left turn on a red light.

E. Notes on Multiple Turn Lanes

- A vehicle in the second lane can make the same turn as a vehicle in the first lane only when a lane use control sign or marking permits it.
- You'll often see white channel lines & arrows on the pavement. These lines help to direct you into the correct lane while turning.

- 4. RIGHT TURNS:** Making right turns can be just as dangerous as left turns. Study the diagram in the next column showing the 4 basic steps making right turns. You should also remember these tips:

- On right turns, avoid moving wide to the left before going into the turn or as you make the turn. If you swing wide, the driver behind you may think you are changing lanes or turning left and may try to pass you on the right. If you swing wide as you complete the turn, drivers who are in the far lane will not expect to see your vehicle in that lane of traffic.
- Well ahead of the turning point check for traffic behind and beside your vehicle. Get as close as is practical to the right curb or road edge without interfering with pedestrians, bicyclists or parked vehicles.
- Give a signal for a right turn for at least 50 feet .
- Before starting to turn look to the left and right for cross traffic on the intersecting street and oncoming traffic that may also be turning. Always check for pedestrians or bicyclists to your right before turning. Remember to yield the right-of-way, if necessary.
- Move your vehicle around the corner and into the travel lane closest to the right curb.

HOW TO MAKE A RIGHT TURN

There are four steps in making a right turn. Be careful not to swing to the left before or during the turn.

A. Turn Warning: Trucks and Buses Turning Right

When driving in city traffic, pay special attention to the turn signals of large trucks and buses.

- Large trucks and buses **MUST** make wide turns.
- Sometimes they must leave an open space to the right just before the turn. To avoid an accident, don't pass a truck on the right if there is a possibility that it might make a right turn.

B. Turns Permitted on Red

Tennessee law allows a right turn on red and left turns on red at certain one-way to one-way intersections, unless otherwise posted.

- When making a right turn at a red light, you must first come to a complete stop before reaching the marked or unmarked crosswalk or stop line. Always yield the right-of-way to pedestrians, bicyclists and of course, oncoming

traffic. Be sure to check for signs that prohibit turns on red and/or requires you to use specific lanes for turns.

- A left turn on a red or stop signal shall be permitted at all intersections where a one-way street intersects with another one-way street where traffic is moving in the same direction into which the left turn would be made. You must follow the same rules for complete stop, yielding and observing signs prohibiting turns as you would for a right turn on red.

5. SPECIAL TURNS: Roundabouts and U-Turns

A. Roundabouts: A roundabout is an intersection control device with traffic circulating around a central island. Such traffic circles are usually used to discourage drivers from using neighborhood street for commuting thoroughfares, to slow speeds, and to reduce accidents. You may think that a roundabout is a type of intersection that you would only encounter in a European country. However roundabouts are gaining more favor in American urban and residential areas. Also many of your home towns may have a form of roundabout that has been in use for years known as the “town square”.

- You always travel around a traffic circle or roundabout to the right in a counter clockwise direction.

- On approaching the roundabout, stay in your lane and to the right of the splitter island or yellow pavement markings/curbs directing traffic to the right. These islands or medians are used to prevent vehicles from attempting to travel left around the circle.
- Upon reaching the roundabout, you must yield to vehicles already within the circulating traffic. You should observe the standard right-of-way procedures as with regular intersections controlled by yield signs. Enter the roundabout when there is a gap in traffic and once inside do not stop unless directed to do so by signs, signals or a traffic officer.
- Within the roundabout, proceed at a slower speed (usually posted at 15 to 25 M.P.H.). You may exit the roundabout at any street or continue around again if you miss the street you wanted to turn on .
- In a multi-lane roundabout, do not overtake or pass any vehicles. Remember the roundabout is a low speed traffic control device. Be prepared to yield to vehicle turning in front of you from the inside lane to exit the roundabout.
- Exit the roundabout carefully; always indicate your exit using your right turn signal. Watch for pedestrians in or approaching the crosswalk on the street you are exiting onto and yield the right-of-way if necessary.

B. U-Turns: A U-turn is a turn within the road, made in one smooth u-shaped motion, so as to end up with your vehicle traveling in the opposite/reverse direction as before the turn. *Some towns and cities do not allow U-Turns on the streets and roadways under their control. Check with local police to be sure.*

You may NOT make a U-Turn:

- At any intersection where a traffic light or police officer is controlling the traffic flow.
- At any rural or urban location where you cannot see traffic coming from both directions for at least 500 feet in each direction.
- At any location where U-Turns are prohibited by official signs or markings.
- Between intersections in a city. The safest thing to do is drive around the block.
- At or near a curve or the crest of a hill when the driver cannot see 500 feet or more in each direction. Improper turns are a major contributor to traffic crashes.
- It is illegal in Tennessee for any driver to make a U-Turn on an interstate highway. Emergency crossovers are for the use of emergency vehicles and highway maintenance crews only. It is extremely dangerous and illegal to use them to “turn around” in the event you missed an exit or are in a traffic jam. Drive on to the next exit ramp. Don’t cut across the median strip as this maneuver is also illegal.

TRAFFIC LANES AND LANE USAGE

A traffic lane is a part of a roadway wide enough for a car or a single line of vehicles to travel safely. Most lanes on hard-surfaced roads are marked with white or yellow pavement line markings. On dirt or gravel roads, some rural roads, private drives and other roadways (such as parking lot rows and shopping center perimeter roads) the lanes may not be marked, but they are there anyway. When driving on a road without any centerline markings and where vehicles are coming from each direction, drivers must give others going in the opposite direction at least half the road.

1. Overview of Lane Usage

“White on Your Right, Yellow on Your Left” this simple statement sums up the principle of “right hand traffic” on which all traffic must move upon American roadways. If you ever find yourself driving with the yellow line on to your right pull over immediately. You are driving on the wrong side of the road!

Always drive on the right side of a two-lane highway except when passing. If the road has four or more lanes with two-way traffic, drive in the right lanes except when overtaking and passing other vehicles safely and legally.

Left lanes on some interstate highways are reserved for

car pool vehicles with two or more occupants in the car - watch for diamond signs in the median or painted on the pavement. The center lane of a three-lane or five-lane highway is used only for turning left.

Keeping Right - Drive on the right of the road except when:

- Passing another vehicle going in the same direction as your vehicle.
- Driving to the left of center to pass and obstruction. (Whenever possible always drive around obstructions or accidents to the right side to avoid the possibility of becoming involved in a head-on collision.)
- A road is marked for one way traffic.
- You are turning left.

2 LANES - Two-lane highways have a single broken yellow centerline. You should always drive to the right of the centerline, except to pass, when you can pass safely.

4 LANES - A four-lane (or more) highway is divided in half by two solid yellow lines in the center. The two lanes on each side are divided by a dashed white line. Drive in the extreme right lane except when passing another vehicle or to make a left turn.

ONE WAY - A one-way highway is generally composed of two or more lanes restricted to moving in one direction. There should not be any vehicles traveling in the opposite direction on these roads.

2. Divided Highways

Always use the road on the right when driving on a divided highway, such as an interstate, unless directed to do otherwise. Do not drive within, across or over any median strip or barrier separating these roadways. It is only allowed at an authorized crossover or intersection, or when you are officially directed to do so.

The diagram at right gives you the correct procedure for turning left (or making a U-Turn where permitted) on a divided highway. You will note that you should treat the crossover/ opening the same as a roadway by keeping to the right side of the lane. Remember such crossovers are **ONLY PERMITTED** at openings provided on the highway. There are **NO** crossovers provided for traffic on interstates. It is illegal to crossover or cross the median on the interstate

Drive in the Proper Lane

unless directed to do so.

Driving the wrong way on a one-way road or street is very dangerous and illegal. If you see red reflectors facing you on the lane lines, or red "Wrong Way" and "Do Not Enter" signs, you are on the wrong side of the road. Get into the proper lane immediately! If you see red reflectors on the lines on the edge of the road, you are on the wrong freeway ramp. Pull over immediately! Red reflectors always mean you are facing traffic the wrong way and could have a head-on collision.

3. Dual Use Lanes

Dual use lanes have both a turn arrow and a straight arrow. You can proceed straight or make the indicated turn from these lanes as shown by the pavement markings and/or signs erected at the intersection. Unless the intersection has a protected arrow for your turn you must follow the standard right-of-way rules.

4. Shared Center Turn/2-Way Left Turn Lane

These center lanes are reserved for vehicles making left turns in either direction from or into the roadway. These lanes cannot be used for passing and cannot be used for travel further than 300 feet. On the pavement, left turn arrows for traffic in one direction alternate with left turn arrows for traffic coming from the other direction. These lanes are marked on each side by solid yellow and broken yellow lines. Enter the shared lane only when safe to do so.

If this special lane has been provide for making left turns, do not make a left turn from any other lane. Enter the shared center turn lane just before you want to make the turn. If you enter too soon, you may interfere with another driver's use of the lane. Wait in the special lane until traffic clears enough to allow you to complete the desired left turn movement. Do NOT travel in the center turn lane to access a left turn lane at an intersection.

You may turn from a side street or driveway into a shared center turn lane, stop, and wait for traffic to clear before merging into traffic in the lane immediately to your right.

Make sure the lane is clear in both directions and then turn into the lane only when it is safe.

Be sure to give the proper signal while waiting to move into the right lane and also when moving out of the turn lane back into the right lane of traffic.

If another vehicle is already in the turn lane from the other direction you may NOT enter if it will interfere with the other vehicle's intended turn. When vehicles enter the turn lane from opposite directions the first vehicle to enter the lane shall have the right-of-way.

5. Reversible Lanes

Some travel lanes are designed to carry traffic in one direction at certain times and in the opposite direction at other times. These lanes are called "reversible lanes" and are usually marked by double-broken yellow lines. Before you start driving in them, check to see which lanes you can use for the direction of travel at that time. There may be signs posted by the side of the road or overhead. Special lights are also often used.

- A green arrow means you can drive in the lane beneath it.
- A red "X" means you can NOT drive in the lane below.
- A flashing yellow "X" means the lane is only for turning.
- A steady yellow "X" means that the use/direction of the lane is changing and you should move out of it as soon as it is safe to do so.

These type of lanes and control devices are usually found in heavily traveled industrial areas where there is a high volume of rush hour traffic coming in during the morning and going out during the afternoon.

6. Reserved Lanes

On various roadways, one or more lanes may be reserved for special vehicles. Reserved lanes are marked by signs stating that the lane is reserved for special use, and often have a white diamond posted at the side of the road and/or painted on the pavement surface. Do NOT travel in one of these lanes

unless operating the type of vehicle indicated, or unless you must turn across the reserved lane in the next half block distance.

- "Transit" or "buses" means the lane is for bus use only.
- "Bikes" means the lane is reserved for bicycles.
- "HOV" - High Occupancy Vehicle lanes are reserved for car pools and vehicles with more than one person in them. Signs say how many people must be in the vehicle as well as the days and hours to which the reserved use applies. For example, "HOV 2" means there must be at least two people in the vehicle for you to legally drive in that lane.

7. Changing Lanes

Changing lanes on a multi-lane highway or interstate should never be done without thinking and looking. Absent-minded lane changing is extremely dangerous. Common sense, alertness, and courtesy are all essential to your safety and the safety of other drivers. Use the following steps to help you make safe lane changes:

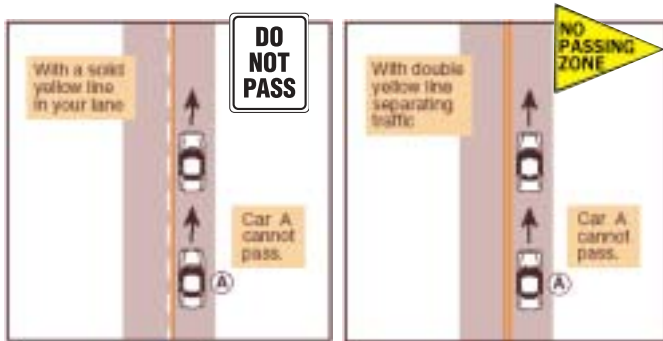

- Pay attention to clearance space ahead and behind your vehicle.
- Check your rearview mirrors.
- Signal your intention to change lanes.
- Look over your shoulder in the direction you will be moving.
- Look behind you to both sides again.
- CHECK YOUR BLIND SPOTS. As shown to the right the driver in front cannot see the motorcycle or other car just by checking his mirrors. He would need to physically turn his head and look over his shoulder in each direction to see those vehicles next to him.
- Change lanes gradually and carefully.
- Do not cruise in the blind spots of any vehicles ahead of you.

When a driver ahead of you (in your lane or the lane next to you) signals a lane change, slow down and leave space for the change. Do NOT speed up or change lanes yourself until the other driver has completed his intended movement. Otherwise you could interfere with his lane change and contribute to a dangerous situation or accident.

PASSING OTHER VEHICLES

Passing another vehicle is a normal part of driving, but it can be very dangerous. Collisions resulting from improper passing are often fatal since the impact is greater in this type of accident. Before you attempt a pass, be sure you have enough room to complete the maneuver. If you have to cut back to your lane too soon, you risk sideswiping the vehicle you are passing. If you do not cut back to your lane soon enough, you risk a head-on collision.

It is equally important to know when NOT to pass as well as when to pass. The decision of whether or not to pass is influenced by the knowledge, judgment, attitude and behavior of the driver. BE PATIENT. Study and learn the following passing rules well and practice them each time you pass another vehicle.

1. Passing on the Left — requires the following safety precautions:

- Know the speed and acceleration ability of your vehicle, and be able to estimate the speed of the vehicle you are passing as well as that of any oncoming traffic. As a rule, if you see any sign of an oncoming vehicle, it is too close for you to risk a pass. When in doubt, stay in your lane.

- Stay well back of the vehicle you want to pass to allow yourself a better view of the road ahead. Check well ahead for a NO-PASSING ZONE and on-coming vehicles.
- When overtaking and passing another vehicle traveling in the same direction on a two-lane road in the USA, you should pass only to the left of the vehicle.
- Signal you move to the left and check your rearview and side-view mirrors before you change lanes.
- Do NOT swing out across the center line for a look, if you need to do this to see you are either following too closely or attempting to pass in an area where your sight distance is too limited to pass safely.
- Check your blind spot for any vehicle that may be starting a pass around your vehicle.

- Move to the left (oncoming traffic lane) ONLY when it is safe to do so. Pass on the left at a safe distance and do not return to the right lane until safely clear of the over-taken vehicle. (See diagram above)
 - Complete your pass as soon as possible. When you can see the entire vehicle you passed in your rearview mirror, signal right and return to your lane. Be sure to cancel the signal light so that you are not driving with your right turn signal flashing.
 - As a general rule it is NOT SAFE to pass more than one vehicle at a time, although it is not illegal in Tennessee to pass multiple vehicles. It is recommended that you not even consider passing multiple vehicles unless you:
 - A. are on a straight, level roadway where your vision of oncoming traffic is excellent
 - B. can complete the pass of all vehicles and be safely returned to the right lane before coming within 100 feet of the no passing markings (solid yellow line, signs, etc.) and/or any oncoming vehicles approaching from the opposite direction.
 - Take extra precautions during inclement weather and twilight hours. Some oncoming vehicles may not be easily visible at these times, especially if they aren't using their headlights as required.
 - Whenever possible try to avoid passing at night, unless you are familiar with the roadway on which you are traveling. It is more difficult at night to see where the passing zone ends and if you aren't familiar with the roadway a slight hill/incline or curve in the road ahead could prove deadly.
- ### 2. Passing on the Right:
- The driver of a vehicle may overtake and pass upon the right of another vehicle only under the following conditions:
- When the vehicle overtaken has signaled to make or is about to make a left turn. ***Never pass on the left of a driver who has signaled a left turn.***
 - Upon a street or highway with unobstructed pavement, not occupied by parked vehicles, and such paved roadway is of sufficient width for two or more lines of moving vehicles in each direction.
 - Upon a one-way street, or upon any roadway on which traffic is restricted to one direction of movement, where the roadway is free from obstruction and such road is of sufficient paved width for two or more lanes of moving vehicles.
 - You may never legally pass on the right by driving off the pavement or main portion of the highway. Use extra care when you pass on the right; other drivers do not expect to be passed on the right if they are not traveling on a multi-lane roadway.

- Do NOT pass on the right using a bike lane or parking lane at any location, nor in the emergency lane within sight of a traffic light or stop sign. This situation often happens at intersections when vehicles are stopped for a red light: *A vehicle attempts to pass on the right and one of the cars ahead starts to make a right turn when the light changes resulting in a crash. The person passing on the right will be “at fault” because the vehicle turning right was properly traveling within the marked lane of traffic.*
- The driver of a vehicle may overtake and pass another vehicle on the right only under conditions permitting such movement in safety. **In no event shall such movement be made by driving off the pavement or main-traveled portion of the roadway.**

3. No Passing: It is not always safe to pass. Make certain the way is clear. Give the proper signal before changing lanes. Tap your horn when necessary to avoid surprising the driver ahead. Avoid cutting in too quickly if you must return to your original lane. Remember you may NOT cross the center line to pass under the following conditions:

- Do not pass when approaching any road-way intersection or railroad crossing, when approaching any narrow bridge, viaduct or tunnel, or where there is an oncoming car.
- Do not cross the solid yellow line in your lane.
- You should always stay to the right of the center whenever the solid yellow line is on your side of the center lane marking.

Intersections

Railroads

Bridges / Tunnels

Oncoming Traffic

- Do not pass unless the pass may be completed without interfering with the safety of the oncoming vehicle and before the solid yellow line reappears in your traffic lane.
- Do not pass a school bus or church bus when the flashing lights are operating and the stop arm is extended.

Hills

Curves

- Do not pass when approaching a hill or curve.
- Do not pass a car that has stopped for pedestrians in a marked or unmarked crosswalk. Passing in this type of situation is a frequent cause of death to pedestrians, especially if the passing vehicle is traveling at a high rate of speed.

Safety Tip: when stopping for a crosswalk on a multi-lane road, you should stop about 30 feet before the crosswalk so you don't block visibility of the crossing pedestrians to a driver in the other lane(s).

- Do not pass on the right shoulder of the highway. Other drivers will not expect you to be there and may pull off the road or turn right without looking.
- The end of a “no-passing zone” does not mean it is safe to pass. It means there is increased visibility ahead. It is still up to YOU to determine if it is safe to pass after considering all the conditions discussed above.
- The solid yellow line marked on the pavement in a “no-passing zone” indicates that you may NOT cross the centerline to pass. You are allowed to turn across the centerline if you are making a left turn into or coming out of an alley, intersection, private road or driveway while in the “no-passing zone”.
- Do not “weave” in and out of traffic by repeatedly passing on the left, then back to the right and then passing again on the left, etc. Weaving from lane to lane in an attempt to move faster than the flow of traffic is the sign of an immature driver and is extremely dangerous.

- 4. Being Passed by Another Vehicle:** When another driver tries to pass you, there are many chances for a collision. The other driver may cut in too sharply, you may be changing lanes, or the other driver may be forced back into your lane if he/she has misjudged the distance of oncoming traffic. Keep everyone safe - help the other driver pass you safely by:
- Staying in your lane, and moving to the right if being passed on the left.
 - Maintaining your speed, DO NOT speed up to keep the other driver from passing.
 - Checking oncoming traffic and adjusting your speed to let the other driver move back into the right lane as soon as possible.
 - Slowing down if you observe a car approaching from the other direction while you are being passed. By slowing

down you will allow the passing driver more space to pull back into the right lane in front of you before meeting the oncoming vehicle.

5. Passing Trucks and Buses

“It amazes me when a car cuts in front of me and then slows down! Don’t they realize I can’t stop an 80,000 pound truck the way they can stop a 3,000 pound car?” This statement is heard often from truck and bus drivers regarding the actions of drivers of passenger vehicles passing them on the highway.

In addition to following the guidelines for passing any vehicle, to safely pass a large truck or bus there are additional rules you must learn:

- Complete your pass as quickly as possible - do not stay alongside the truck or bus. This is a common misunderstanding. Staying beside the truck or bus does NOT “let the driver know you are there”. Instead, it puts you in the driver’s blindspot! If you are traveling alongside a truck or bus and can look over and see any portion of the tractor from the driver/passenger door back to fifth wheel area where the trailer is connected you are most likely in the driver’s blindspot.
- An excellent point to remember is that if YOU can’t see the side mirrors on the truck or bus you are following then HE CAN’T SEE YOU. This also means that all you can see is the back doors of the truck or bus and not a good view of the traffic situations on the road ahead. You are following too closely and greatly increasing your chance of a rear-end collision with the truck or bus.
- Maintain your speed. NEVER pull in front of a truck or bus (or any type of vehicle) and slow down. This takes away the safety cushion of the driver you have just passed and presents a potentially dangerous situation if you must stop suddenly.
- Keep in mind the terrain you’re traveling on when passing. On a level highway, it generally takes longer to pass a truck or bus than a car. On an upgrade, these heavier vehicles often lose speed, making it easier to pass. On a down grade, their momentum will cause them to go faster, so you may need to increase your speed to pass. Remember it is illegal to exceed the speed posted speed limit even when passing other vehicles.
- There is also no need to refrain from passing a truck pulling multiple trailers. Motorists should treat these trucks as they would any other commercial vehicle and follow the same rules for sharing the road. (See Chapter 12 for more on “Sharing the Road with Trucks”.)

BACKING AND PARKING

1. Backing

In general, never back a vehicle in any travel lane with the exception of backing into a parallel parking space. Drivers do not expect a vehicle to be backing towards them and may not realize it until it is too late. If you must back your vehicle, look carefully and move slowly.

Backing is more difficult for new drivers than traveling forward because the vehicle itself blocks your field of vision, and it’s harder to control speed and direction. You will need a lot of practice to learn to maintain absolute control of the vehicle. Although a small part of the driving tests, backing

is the maneuver that most often causes new drivers to fail their skills test.

- Backing is dangerous because it is hard for you to see behind your car. Here are some rules you should follow whenever you have to back your car:
 - A. Check behind your vehicle BEFORE you get behind the wheel. Children or small objects are hard to see from the driver’s seat.
 - B. Before backing look to the front, both sides and the rear. Place your arm on the back of the seat and turn around so that you can look directly through the rear window. Do not depend solely on your mirrors. Avoid opening the door and sticking your head out to see - this is dangerous.
 - C. Back slowly and gradually. Your car is much harder to control and stop while you are backing. Continue to look to all sides of the vehicle for hazards while backing.
- It is illegal to back into an intersection from a driveway. A driver must take care when backing to see that such movements can be done with reasonable safety and are not interfering with other traffic.
- Backing out of a parking space requires special caution and attention by drivers. You must be aware of the movements of any cars or pedestrians near or approaching your vehicle. Be sure to look both directions before and during the backing maneuver out of the parking space. Be prepared to stop quickly should any hazard appear.
- If you miss your turn or exit, do NOT back up, but go on to the next turn or exit or where you can safely and legally turn around. It is illegal to back up on the interstate.
- Do not stop in the travel lanes for any reason (lost or confused directions, vehicle breakdown, or letting out a passenger). Keep moving until you can safely pull your vehicle off the roadway.

2. Parking

Drivers are responsible for making sure that their vehicle is not a hazard when it is parked. Whenever you park, be sure it is in a place that is far enough from any travel lane to avoid interfering with traffic and easily visible to vehicles approaching from either direction.

Routine Parking Regulations: The following are some routine rules regulating parking vehicles that you should become familiar with:

- Always park in a designated area if possible.
- When parking adjacent to a roadway outside of city limits, all four wheels must be off the pavement, if possible. In any event you must ensure that you leave at least 18 feet of road width for other traffic to pass your parked vehicle, and your vehicle must be visible for at least 200 feet in either direction.
- Signs or yellow painted curbs usually mark a **“NO PARKING ZONE”** in cities and towns.
- Double parking is prohibited by law.
- It is against the law to leave the engine running in a parked unattended vehicle.
- Remove ignition keys from parked, unattended vehicle. It is a good safety habit to lock the doors of your vehicle when it is left parked unattended.
- **When parking on a hill follow these rules:**
 - A. On a downhill with a curb: turn the front wheels toward the curb (right) and set the parking brake. If your car rolls it will roll into the curb and not the roadway.
 - B. On an uphill with a curb: turn the front wheels away from curb (left), this way if your car starts to roll back it will roll into the curb and stop, instead of rolling into traffic.
 - C. On a downhill without a curb: turn the front wheels toward the edge of the roadway (right). Again this will prevent the vehicle from rolling into traffic if the brake fails.
 - D. On an uphill without a curb: Turn the front wheels toward the edge of the roadway (right). This will allow your car to roll away from the center of the road in the event the brakes fail.

- A driver must look, signal and yield the right-of-way when coming out of a parking place.

- Always set your parking brake when you park. Leave the vehicle in gear if it has a manual transmission or in “park” if it has an automatic transmission.
- The “hazard”, or four-way flashing directional lights may be displayed during the hours of darkness when a vehicle is disabled or otherwise presents a traffic hazard.

3. No Parking Zones

There are many areas where you cannot park. **It is illegal to park:**

- In front of a public or private driveway.
- Within an intersection.
- Within 15 feet of a fire hydrant.
- Within 20 feet of a crosswalk or upon the crosswalk marked area.
- Within 20 feet of a fire station driveway on the same side of the street or on the other side of the street within 75 feet of the fire station driveway.
- Within 30 feet of a traffic signal, stop sign or any other traffic control device.
- Within 50 feet of a railroad crossing.
- On a sidewalk.
- Upon any bridge or within a tunnel.
- In a parking space clearly identified by an official sign or pavement markings indicating the space is reserved for use by a physically handicapped person.
- On the traffic side of another parked vehicle (double parked).
- On the shoulder of any interstate (except for an emergency situation).
- Where official signs prohibit stopping or standing.
- Other parking restrictions may be indicated by painted curbs. A painted curb means that you must follow special rules to park there. The colors on the curbs mean:

WHITE

Stop only long enough to pick up or drop off passengers.

YELLOW

Stop only long enough to load or unload. Stay with your car.

RED

Do not stop, stand or park in this space under any conditions.

4. Parallel Parking

Your ability to judge distances while controlling the speed of your vehicle is the key to completing this parking maneuver. When parallel parking, be sure to continually check for oncoming traffic conditions. Parallel parking is a true test of the driver's ability to handling “multi-tasking”

STEP 1: Check traffic behind you, signal, stop even with the car in front of the open parallel space you are going to park in. Your rear bumper should be even with the bumper of the other parked car and you should ensure that you do not get your vehicle any closer than 2 feet from the other vehicle.

STEP 2: Turn your head to the right and look over your shoulder at the space you are going to back into, also scan frequently back to the front observing your distance from the other parked car. Begin backing very slowly, turning your steering wheel sharply to the right until your car is at about 45-degree angle with the street. As your front passenger side door passes the rear bumper of the other car quickly straighten your front wheels and slowly continue to back straight.

STEP 3: When your front bumper is even with the other car's back bumper, turn your wheels sharply and rapidly to the left as far as necessary. It is extremely important that you remember to continually check the space around your vehicle while making this maneuver. You need to be especially aware of traffic on the road and the distances between your vehicle and the other parked cars. This task requires

STEP 4: Turn your steering wheel sharply to the right and slowly pull forward toward the curb. Continue adjusting slowly and gradually until your car is centered in the parking space.

Upon completion of your parallel parking maneuver your vehicle should be no further away from the curb than 18 inches. As you prepared to exit the vehicle be sure to check the traffic before you open the driver side door. Get out of the vehicle on the curb side if you can. If you have to use the street side, wait till any traffic has passed, get out quickly and shut the door as soon as you can. Move to the curb or sidewalk quickly for your safety.

5. Emergency Parking (Disabled Vehicles)

In the event it becomes necessary for you to leave your vehicle parked on a highway or street, follow these rules:

- Park your vehicle with all four wheels off the traveled portion of the highway if possible. Otherwise pull onto the shoulder of the road as far away from traffic as possible. If there is a curb, pull as close to the curb as possible.
- If you cannot move the vehicle off the highway raise the hood or tie a handkerchief on the left door handle or antenna to warn other motorists.
- Turn on your car's emergency flasher lights. Set your parking brake, shift into park or leave the vehicle in gear, and turn off the engine. Lock your vehicle

- A stopped car on the Interstate (even on the shoulder) is extremely dangerous. Do not stop on an Interstate highway except for an emergency.
- Walking on the Interstate is both illegal and dangerous. Except for extreme emergency cases, you should remain in your broken down vehicle until a State Trooper, other police officer, emergency service vehicle, or a good Samaritan stops to offer assistance.

6. Handicap Parking Spaces

The handicap parking symbol, which appears on reserved parking signs, placards and license plates, is the international symbol of access for persons with physical disability. Parking spaces marked with this symbol are only to be used by vehicles displaying a valid placard or license plate with this symbol, and only when transporting the person who was issued the placard or plate.

It is illegal for anyone else to park in these spaces. If you improperly park in these designated spaces you will be committing a misdemeanor punishable by a \$100 dollar fine and your vehicle could be subject to being towed.

7. Parking Meters

Many public parking spaces are regulated by coin-fed parking meters. Meter regulations are usually in effect during posted days and hours. In most areas, a maximum time limit for parking in those spaces is also posted. If you exceed the limit or fail to pay the meter fee, you may be issued a parking ticket and your vehicle may be towed.

8. Angle Parking

Angle parking is often used in parking lots, shopping centers, and sometimes at curbs.

When you enter an angle parking space on your right:

- Watch for traffic both ahead and behind.
- Signal and begin slowing down.
- Make sure the rear of your car will clear the parked cars.
- Steer sharply into the parking space, then straighten the wheels, centering your car in the parking space.
- Shift to Park or reverse if driving a standard transmission vehicle and apply the parking brake.

Before backing out of an angle parking space:

- Walk around to make sure nothing is in your way.
- Move your car back slowly because it is hard to see oncoming traffic. Be sure traffic is clear in the lane where you are backing.
- Maintain a cautious speed so that you can yield if necessary to pedestrians or oncoming vehicles.
- When you can see past the tops of cars parked next to you, stop and look again. Look back and to each side for other drivers.
- Remember that the front of your car will swing opposite to the direction of your turn.
- Back slowly while turning until your left front wheel passes the rear bumper of the car parked on the left.
- Straighten the wheels as your car comes back into the lane for traffic.

INTERSTATE DRIVING

Interstate Highway Driving Is Different!

Traffic on Interstates usually moves more safely and efficiently because access is controlled. There are no stop signs, no railroad crossings and no traffic lights. Interstates usually have few steep hills or sharp curves to limit your view of the road ahead. Limited access or controlled access means that you enter or leave the roadway only at entrances and exits, called interchanges, without ever crossing the path of other traffic. Interstates and divided highways have largely removed the chance of head-on collisions but driving on our Interstates is very different.

Interstates, require good driving skills and habits for you to safely get where you are going. Safe use of the Interstates demands a complete awareness of a higher speed type of driving and constant alertness by the driver.

Before Driving on the Interstate

Plan your trip in advance so that you know your entrance, direction, and exit. Make sure that you and your car are in good condition. Check your gas gauge before getting on the Interstate. In rural areas it may be many miles between exits and you could risk running out of gas before getting to a location where you could refuel. If you cannot or do not wish to drive at or above the minimum speed limit, do not use the Interstate.

Entering the Interstate

In most driving situations, you slow down or stop before you enter a busy road, but when entering an Interstate you do the opposite. You must use the merging or acceleration lane to speed up and merge with fast-moving traffic already on the Interstate.

Good judgment and good timing are necessary to merge smoothly with the fast-moving traffic. Upon entering the Interstate on-ramp, stay to the right and increase your speed in the acceleration lane/entrance ramp. Use the ramp to reach Interstate speed in order to allow your car to merge into the travel lane when the way is clear. Be sure to give the proper left turn signal to indicate your need to enter the traffic lane. Drivers already on the Interstate should, for their own safety, make allowance for those vehicles attempting to enter. However it is your responsibility to yield the right-of-way to other cars on the Interstate.

Unnecessary stopping on Interstate on-ramps causes many rear-end collisions and also obstructs the even flow of traffic. Do not drive to the end of the ramp and stop or you

will not have enough room to get up to the speed of the Interstate traffic. Drivers behind you will not expect you to stop and if they are watching the traffic on the main road for their space to merge you could easily be hit from the rear. If you have to wait for space to enter an Interstate, slow down on the ramp so that you will still have some room to speed up before you have to merge. Heavy traffic conditions sometimes create a “slowdown” at an entrance ramp, but unless it is absolutely unavoidable, it is best to keep your vehicle moving at least at some slow pace.

LANE ADDED

MERGING TRAFFIC

Do you know what the difference in the two signs above is?

Both appear to be telling you that traffic is coming into the main road from the right. However there is an IMPORTANT difference.

- The “lane added” sign means that there is a new right lane added to the Interstate/roadway for the incoming traffic. The on-ramp becomes a new lane and the entering traffic does not need to merge immediately. Traffic on the Interstate should avoid making lane changes to the right at this location as the entering traffic will not be expecting vehicles to move into their travel path.
- The regular ‘merge’ sign means that the traffic coming from the right is going to need to merge into the existing right hand traffic lane and drivers on the Interstate should be aware and cautious of this incoming traffic.

Driving on the Interstate

Interstates usually have several lanes of traffic traveling in the same direction. On these roads, you should leave the extreme left lane for faster traffic. If you drive at an even speed, you will have less need to change lanes. Remember, lane-hopping any time is dangerous, annoys other drivers, increases the risk of a collision, often contributes to “road rage” and very seldom saves the driver any significant amount of travel time.

Keep your vehicle in the middle of your traffic lane. You may change lanes when necessary, but don’t weave in and out of traffic. Do not travel alongside other vehicles at the same speed or you risk being in the other driver’s blind spots. Change speed and/or lanes to avoid these situations. Avoid cars moving in packs and keep a safe space cushion around your vehicle for emergency maneuvers. If you are going to exit the Interstate move to the right lane as early as possible to avoid hasty lane changes which could result in a dangerous situation or traffic accident.

Stay at least 2-seconds behind vehicles in front of you and increase this space to a minimum of 4-seconds in bad weather, night driving and on higher speed rural sections of the Interstate. Scan the roadway ahead, try to watch 15-20 seconds in front of your vehicle for cars braking, entering or exiting. There are times, especially in major cities, when Interstates get jammed by heavy traffic or tie-ups caused by collisions during rush hour traffic. Be alert for any hint that traffic on the Interstate ahead is not moving at a normal pace. Otherwise, you might have to slam on your brakes to avoid a rear-end crash with the vehicle ahead. If you spot a tie-up that will cause you to slow down or stop, lightly tap your brake pedal several times to alert drivers behind you.

“Traffic Flow” and Speed Control on the Interstate

Speeds traveled on rural Interstates are higher than on other roads. There also are fewer stop-and-go situations. Try to keep pace with traffic on the road, but **don’t be lured into exceeding the posted speed to “stay with the flow of the traffic”**.

Do maintain a constant speed and keep a safe pace with other traffic. Do not speed up and slow down unnecessarily. Drive between the minimum (45 M.P.H.) and the maximum (55-70 M.P.H.) speed limits. Driving too slowly is against the law because it’s dangerous. A slowpoke on an Interstate can be just as reckless as a speeder. Remember, if you drive at a speed below the flow of traffic, you must use the right lane and if the minimum speed is too high for your comfort you should use a different roadway.

If you are traveling in the left lane and someone comes up behind you at a faster speed, move one lane to your right. Do not tie up traffic in the left lane. Courteous and safe driving practices require that drivers in any lane, except the right lane used for slower traffic, should be prepared to move to another lane to allow faster traffic to pass.

By the same token these practices teach that drivers in the right lane should adjust their speed to allow others to enter the Interstate safely. Be alert to merging traffic signs. When it is safe to do so, you should either slow down or move to another lane to allow space for on-ramp traffic to merge safely. Remember, trucks and buses entering the Interstate may need extra time to adjust to traffic patterns. Be cooperative and give them extra time and space to adjust to the traffic flow.

Leaving the Interstate

Interchanges may be different and it is important to watch for advance directional signs. Choose the right exit, and be sure you are in the proper lane well before you turn off the Interstate. The heavier the traffic the earlier you should move into the proper lane. Exit signs are usually placed at least one (1) mile ahead of the exit turn-off.

To leave the Interstate, signal your intention to change lanes, and move to the lane nearest the exit/off-ramp. Maintain your speed until you enter the deceleration lane, which is usually outlined by a series of amber reflectors, and reduce speed to the exit ramp posted speed. Speed should be reduced further on the exit ramp. You should have your vehicle slowed to the posted limit for the roadway you are exiting onto.

The paved shoulder of the Interstate should not be used for vehicular travel except for deceleration when marked for this purpose or for emergency purposes.

Remember, it is illegal to back up or make a U-turn on Interstate highways. If you miss your exit you must proceed to the next exit.

Interchanges

It is also very important to know how to maneuver on the different types of interchanges. Two common types of interchanges are the DIAMOND and the CLOVERLEAF, which are diagrammed and explained below. There are various other types of interchanges and methods of turning may vary from one to the other. When approaching any type of interchange, heed signs that will tell you how to make the turn you want to make.

Diamond Interchange

Traffic using the interstate may gain access to the intersecting roadway by taking the signed exit ramp, proceeding to the cross roadway and obeying the traffic sign or signal at the intersection. Turns may then be made to the right or left as at any ordinary intersection.

DIAMOND INTERCHANGE

With a diamond interchange, the proper exit ramp will always be encountered before passing over or under the intersecting roadway.

Traffic using the cross roadway may enter the interstate by making either a left or right turn onto the appropriate entrance ramp. THE RIGHT TURN entrance ramp will

always be encountered BEFORE crossing over or under the interstate. The LEFT TURN entrance ramp will always be encountered AFTER crossing over or under the interstate.

NEVER MAKE A RIGHT TURN onto a ramp AFTER crossing the interstate lanes.

NEVER MAKE A LEFT TURN onto a ramp BEFORE crossing the interstate lanes.

Cloverleaf Interchange

At a cloverleaf interchange, all turns are right turns.

TO TURN RIGHT...You take the right turn before you get to the overpass.

CLOVERLEAF INTERCHANGE

TO TURN LEFT...You take the right turn just after the overpass. The road will carry you around to join the crossroad and you will be going in the same direction as if you had turned left at an ordinary intersection. The advantage of such an interchange is that you do not have to cross the path of traffic to make a turn.

“Weaving” Interchange

One of the most hazardous lane management situations occurs when Interstate traffic is both exiting and entering at the same area. This weaving of vehicles trying to get on or off the highway at the same time requires the complete attention of all drivers and quick reactions for a safe maneuver. A weaving section takes maximum cooperation. It can't work without sharing and sensible, courteous social interaction on the part of every driver. Signs and lane markings do their part. Safe drivers have to do the rest.

You should follow the routine procedures for entering the Interstate as those used at normal on-ramps, however you must be aware that vehicles already on the Interstate may be moving right to enter the exit ramp. This will require both you and the other driver to yield and share the interchange in a equal “give and take” manner. If drivers aren't paying proper attention to the directional signs and lane design this movement of exiting traffic can create the potential for a serious accident. You must use extreme caution when utilizing these type of interchanges.

Fight Interstate Hypnosis

Continuous Interstate driving can become monotonous. A condition of drowsiness or unawareness can be brought about by reduced activity and steady sounds of wind, engine, and tire hum. This is known as Interstate hypnosis. **All drivers should be aware of its danger and of the methods for fighting it.** Use the following tips to help you recognize and avoid this condition:

- **Keep shifting your eyes.** When driving, look well ahead but avoid staring. Get into the habit of shifting your eyes left and right and of checking your rearview mirror. If you sit and stare straight ahead, you can almost put yourself to sleep.
- **Quit driving when you are drowsy.** Drowsiness is the first step in falling asleep.
- **Keep your car's interior as cool as possible.**
- **As a further protection, stop and refresh yourself at regular intervals.** Take a break and get out of the car at least every 2 hours or every 100 miles or so. Even if you are feeling well you should stop, get out of your car and walk around, allow your muscles to relax.
- It is safest for yourself and others if you **do not drive more than 8 hours per day.**

Special Interstate Driving Instructions

1. On the Interstate, you may **NOT**:
 - Drive over or across any dividing section or separation (only emergency vehicles and highway maintenance crews may cross an Interstate median legally).
 - Make a left turn or a U-turn except through an opening provided and marked for such turns.
 - Change lanes without signaling.
 - Drive in the blind spot of other drivers. Traveling in a position where the driver ahead of you cannot see your vehicle can be dangerous. Either stay behind or go around. Do NOT follow to the side.
 - Drive onto the Interstate except through an opening provided for such entrance.
 - Park or stop on the Interstate except at areas especially provided. Parking on the shoulder of the Interstate is prohibited except in cases of emergency.
 - Back up if you miss an exit - You must go to the next exit.
2. Always remember these tips for safe Interstate driving:
 - Drive in a dependable and predictable manner
 - Be a safe and courteous driver.
 - Always signal your intentions well in advance.
 - Keep you attention constantly on your driving.
 - Make frequent traffic checks by looking in your rearview and side-view mirrors often.
 - Keep a safe following distance between your car and the vehicle you are following.
 - Check instruments often for speed and fuel supply.
 - Keep pace with traffic but don't speed illegally just because other drivers are speeding.
 - Stay in the right lane if traveling slower than the other traffic.
 - Be alert to merging traffic signs and vehicles entering the Interstate.
 - When safe to do so, move to another lane to allow on-ramp traffic to enter the Interstate.

3. Special situations to be aware of include:

- **Be prepared for the unexpected!** - When driving on an Interstate highway, look out for pedestrians who may have had a vehicle breakdown, or animals that may be on the roadway. It is not an impossibility for vehicles to be traveling in the wrong direction on an Interstate!
- **Lane Wandering** - Weaving and wandering are dangerous. Keep to the right unless overtaking or passing. Watch mirrors, and signal before changing lanes. Don't cut back until it is safe. Stay aware of surrounding traffic conditions.
- **Maintain Safe Distance** - Following too closely is the cause of many multiple-car collisions. Higher Interstate speeds increase danger, and require greater distances between cars.
- **Night Driving** - Darkness increases driving dangers. On the basis of mileage driven, night driving is far more dangerous than day driving. Fatigue and sharply reduced vision are primarily responsible for this greater danger. It is also true that drinking drivers are more likely to be on the road at night.

Vehicle Breakdowns, Accidents and Emergency Stopping on Interstate Highways

If you have vehicle trouble, move to the right shoulder or emergency stopping area as soon as you can. Turn on your emergency flashers to warn other traffic. If you need help, raise your hood and tie a white cloth to the hood or radio antenna. If possible, it is better to stay in or near your vehicle on the side away from traffic. Walking along the Interstate is dangerous. Keep children away from traffic.

If you stay with your vehicle, a police patrol will stop to help you when they come by if they are not on another call. If you are within one of the major metropolitan areas of Tennessee (Memphis, Nashville, Chattanooga or Knoxville) you may also receive assistance from one of the Tennessee Department of Transportation's Incident Response Units (HELP Truck). These units patrol specific routes on the major Interstates in these cities. The HELP operators have the authority to "remove or cause to be removed" any vehicle that is an "obstruction or hazard to traffic". The HELP operators are trained to deal with incident scenes, and you should always follow their instructions same as those of other police or traffic control personnel. (You can find more information on the HELP program at the TDOT website: www.tdot.state.tn.us)

If you are involved in a traffic accident on the Interstate, Tennessee law now allows you to move the vehicle to help prevent blocking the traffic flow. If the vehicle is still drivable and there are NO SERIOUS PERSONAL INJURIES or deaths you may pull the vehicle(s) to the emergency lane

and await the arrival of a trooper or police officer to the accident scene. Never attempt to move a seriously injured accident victim unless directed to do so by the proper emergency personnel. Also never disturb an accident scene in any manner when a fatality is involved. Under Tennessee law you must not leave the scene of any type of crash, but, while remaining at the scene, you should not "unnecessarily block traffic".

***THP** - In the event of a highway emergency, your free cellular phone call connects you directly to a Tennessee Highway Patrol Dispatcher for assistance. Simply dial:

***-T-H-P** (or *847)

Interstate Travel Tips

Plan your trip in advance. Use a map and decide exactly where to get on and off the interstate.

Check your car's gasoline gauge and get fuel if you do not have enough for your trip. Also check for water and oil needs. Higher speeds generate more heat. Because there are no service stations located directly on Interstates, you are in serious trouble if you run out of gasoline or have a breakdown.

Make sure your car is in good mechanical condition; that your tires, including spare, are properly inflated, have good treads and are free of breaks.

If you have car trouble, pull completely off the traveled portion of the road. Be especially cautious at night since there is a danger of being hit from the rear.

To signal for assistance on the Interstate, tie a white handkerchief or scarf to the left door handle or radio antennae or raise the hood of the car. To signal after dark, turn on your inside dome light and/or set out flares or portable warning signals. Wait for help. Do not walk along the Interstate.

Suggested Safety and Emergency Equipment

Often, we don't think about what we need in traveling situations until we encounter an emergency. In case of a flat tire, vehicle breakdown or other roadside emergency on any road, you should have the following items in your car:

- Spare tire in excellent condition (be sure to have it checked each time you have your tires rotated).
- Jack and tire iron
- Tire Pressure Gauge
- Can of sealant for small leaks in tire(s)
- Flash light, portable radio and spare batteries
- Car Owner's Manual
- Insurance information and car registration
- Paper, pen or pencil
- Three fuses or reflectors for night-time emergencies.
- First Aid Kit
- Fire Extinguisher
- Jumper cables

-
- Spare bottle of windshield washer fluid.
 - Empty gas can and an unopened can of motor oil
 - Toolbox with screwdrivers, wrenches, small hammer, scissors, duct tape, etc.
 - Bottled water and some simple non-perishable snack foods. (water is especially prudent to carry when traveling during hot summer weather)
 - Emergency phone numbers of family, friends and auto club or insurance agent.
 - Cellular phone
 - During winter travel also carry:
 - a blanket,
 - small portable heater.
 - window scraper for iced over windows.,
 - snow tires or tire chains

Here's a short test: Most accidents happen:

a.) in clear weather b.) in snow c.) in rain d.) in fog

If you picked anything but (a), you're wrong — pretty days can be deadly too! While adverse weather conditions certainly create dangerous driving situations, the purpose of this chapter is to provide you with a focus on techniques that will help you to avoid accidents in any weather.

AVOIDING COLLISIONS

When it looks like a collision may happen, many drivers panic and fail to act. In some cases they do act, but do something that does not help to reduce the chance of the collision. There almost always is something you can do to avoid the crash, or reduce the results of the crash. In avoiding a collision, drivers have three options:

1. Stop 2. Turn 3. Speed Up

The following section will give you vital information relating to these three reactions.

1. Stopping Quickly

Many newer vehicles have ABS (Antilock Braking Systems). Be sure to read the vehicle owner's manual on how to use the ABS. Also for general details of braking with ABS refer to Chapter 8 of this manual. The ABS system will allow you to stop without skidding. In general, if you need to stop quickly:

With ABS - If you have an antilock braking system and you need to stop quickly:

- Press on the brake pedal as hard as you can and keep pressing on it firmly.

In emergency or slippery conditions with ABS, wheels don't lock; car remains stable and is steerable.

In emergency or slippery conditions without ABS, all wheels lock; car begins to skid and is not steerable.

- You might feel the brake pedal pushing back when the ABS is working. Do NOT let up on the brake pedal. The ABS system will only work with the brake pedal pushed down firmly.

Without ABS - If you must stop quickly and you do NOT have an antilock braking system:

- Apply the brakes as hard as you can without locking them. You can cause the vehicle to go into a skid if you brake too hard.
- If the brakes lock-up, you will feel the vehicle start to skid. Quickly let up on the brake pedal.
- As soon as the vehicle stops skidding, push down on the brake pedal again. Keep doing this until the vehicle has stopped.

2. Turning Quickly

In most cases, you can turn the vehicle quicker than you can stop it. **Evasive steering:** If you are unable to stop in time

to avoid a collision, try to steer around the vehicle or object. You should consider turning in order to avoid a collision. Use your brakes only if necessary.

To be able to turn quickly you need to hold the steering wheel correctly. Make sure you have a good grip with both hands on the steering wheel. For most turns, especially quick turns, you must have your hands on opposite sides of the wheel. It is best to have your hands at about the 3 o'clock and 9 o'clock positions. This will keep your wrists and forearms out of the main impact area of the air bag located in the steering wheel should you become involved in a collision. It is safest to hold the steering wheel in this fashion at ALL times while driving.

To make quick evasive turns to the left:

- **Turn the steering wheel to the left as far as necessary to avoid the obstacle or vehicle.** Hand position = right hand (3 o'clock) swings left toward (or beyond) the 9 o'clock position as far as needed. Left hand moves toward bottom (6 o'clock) to help steady your grip on the wheel.
- **As you clear the hazard, turn the steering wheel back to the right as far as necessary to get back into your lane.** Hand position = left hand (9 o'clock) swings right back toward the 3 o'clock position as far as needed. right hand now moves toward the bottom (6 o'clock) to steady your grip.
- **As you return to your lane, turn the steering wheel left just enough to straighten the vehicle's path of travel.** Hand position = returning to the basic driving position of left @ 9 o'clock and right @ 3 o'clock.

To make quick evasive turns to the right, use the same procedures above, except turn the steering wheel in the opposite direction at each step.

Once you have turned the vehicle away from the road hazard or changed lanes, you must be ready to keep the vehicle under control. Some drivers steer away from one collision only to end up in another. Always steer in the direction you want the vehicle to go.

□ With ABS - One aspect of having ABS, is that you can turn your vehicle while braking without skidding. (See illustration at right) This is very helpful if you must turn to swerve, stop or slow down quickly.

□ Without ABS - If you do not have ABS, you must use a different procedure to turn quickly. As you are braking you will need to let up on the brake pedal and then turn the steering wheel. Braking will slow the vehicle some, and it puts more weight on the front tires and this

allows for a quicker turn. Do not continue braking if you feel the front wheels “lock-up”, or turn so sharply that the vehicle can only plow ahead. Another consideration is that generally it is better to turn off the road then to crash head-on into another vehicle.

3. Speeding Up

Sometimes it is best or necessary to speed up to avoid a collision. This may happen when another vehicle is about to hit you from the side or from behind and there is room to the front of your vehicle to get out of danger. Be sure to slow down once the danger has passed. Also remember to always keep at least a two second (or more) space cushion between you car and the vehicle ahead in order to have this type of emergency out available.

Special Information:

Learn to Use Your Anti-Lock Brakes!

Do's and Don'ts of ABS

DO: Stomp. Slam that brake pedal. Push hard and hold the pedal down. You'll feel the pedal pulsate, and you'll hear noise. Continue to keep your foot firmly on the brake because those are signals the system is working - and that you're in a real emergency situation. The sound and feel often startle people, and their instinct is to let up on the brakes slightly. Don't - that ruins the advantages of ABS.

DON'T: Pump. Never pump the brake pedal of a vehicle equipped with ABS, even if the brake pedal is pulsating. The pulsating feeling is simply the ABS system electronically “pumping” the brakes much faster than you could ever do manually.

DO: Steer. Use the nonskid feature of ABS to steer around the obstacle that made you slam the brakes on in the first place. Continue steering to a safe place once you're past the obstacle.

DON'T: Freeze or Jerk. People sometimes get hurt, or killed, when they jerk the steering wheel suddenly or sharply. This can cause them to run into another object or veer off the road risking a roll-over. Steer normally to avoid the problem and DON'T freeze at the wheel.

DO: Practice. Find a big, empty space, a vacant parking lot such as a deserted/closed shopping center. Be sure the lot is a wide open space without curbs or lots of light poles. Start driving about 20 M.P.H. and slam on the brakes. Steer to prove to yourself you still can. Keep doing this until it becomes habit to steer when you stomp. When you feel comfortable with this you can set up a cardboard box as a target. Aim for the box as if it were a car suddenly stopped in front of you, hit the brakes and steer around the box and then steer back as you would to steer back into the normal traffic lane after avoiding the obstacle. Practice this in various weather conditions: dry, rain, snow, etc.

DO: Space. Keep a safe space between your car and other vehicles. Remember the two second rule for keeping a minimum cushion of space between vehicles. Allow more time/space if conditions are hazardous.

DO: Read. Consult the owner's manual for additional driving instructions on the anti-lock brake system your vehicle is equipped with.

DON'T: Be Aggressive. Never drive an ABS-equipped vehicle more aggressively than vehicle without ABS. *Driving around curves faster, changing lanes abruptly, or performing other aggressive steering maneuvers is neither appropriate nor safe with any vehicle.*

For more information on ABS procedures and safety visit: www.abs-education.org

WINTER DRIVING

The three big errors of most drivers in snow and ice are:

- To over-power and spin the wheels
- To over-brake and slide the wheels
- To over-steer and skid the front wheels

Reduced visibility requires that you make every effort to keep the windshield and all glass clear of snow and ice. The heater-defroster should be in good condition. Windshield wiper blades should work particularly well. Keep the inside of the windshield and door glasses clean.

A good outside rearview mirror is of great help, particularly if the back window glass tends to fog over. To help others see you, always use headlights when visibility is restricted by atmospheric or other weather conditions.

Effect of Temperature on Starting and Stopping Traction - Wet ice at 30 degrees offers about one-half the traction that is to be had at 25 degrees. If the temperature is 25-30 degrees, ice-covered roads are certain to be slippery. If the temperature is down to 10-15 degrees, there will be a noticeable increase in traction.

Inadequate Traction to Go - Overpowering and spinning the wheels creates heat directly under the tires, raises the temperature, and reduces the available traction. Start your car slowly and avoid spinning wheels when moving your car on ice or snow. Keep your speed steady and slow - but not too slow. In deeper snow, it's often necessary to use the car's momentum to keep moving. Have good treads on front wheels to improve steering ability. Snow tires are helpful for winter driving.

Reduced Ability to Stop and Loss of Steering - Low traction also makes stopping difficult. When traveling at 20 M.P.H., low traction can increase stopping distance to 200 feet or more. Use brakes cautiously. Abrupt braking can cause brake lock-up, which causes you to lose steering control.

Braking on Ice and Snow - The most efficient technique for braking under these conditions is to use “threshold” or “squeeze braking” together with de-clutching (manual shift) or shifting to neutral (automatic transmission). Squeeze braking is accomplished by applying the brakes firmly, to a point just short of lock up, and then easing off the brake pedal slightly (not completely), if the wheels should lock. Re-apply the brakes to a point just short of lock up and hold. Do NOT pump the brake pedal, just apply steady pressure. This will give you the best combination of braking effort and directional control.

ABS-Antilock brakes are designed to overcome a loss of steering control. To make antilock brakes work correctly, or work at all, you should apply constant, firm pressure to the

pedal. During an emergency stop, push the brake pedal all the way to the floor, if necessary, even in wet or icy conditions.

Ice on Roads and Bridges - Where Not Expected: The sunny side of a hill may be wet, the shady side covered with thin ice. Usually, signs indicate that ice forms on bridges sooner than on the adjoining roads. In such instances, the car ahead of you may have crossed the icy part of the road and stopped. But a long patch of ice behind his car can easily cause you to skid into him.

Ice and Snow Made Slippery by Traffic - On streets and highways where there is considerable stop- and- go traffic, it does not take long after a storm before the snow packs hard and becomes extremely slippery because of many sliding and spinning wheels. To some extent, steering to one side or the other of the packed section will help avoid the slickest surface. However, great caution should be used when driving on ice and snow.

Hailstorms/Sleet - find shelter by driving under an overpass or bridge.

Skids

If Your Wheels Don't Roll - You Don't Have Control

Skids are caused when the tires can no longer grip the road. Any road that is safe under normal conditions can be dangerous when it is wet or has snow or ice on it. High speeds under normal conditions also increase the possibility of a skid if you must turn or stop suddenly.

Skids are caused by drivers traveling too fast for conditions. If your vehicle begins to skid:

- Stay off the brake. Until the vehicle slows, your brakes will not work and could cause you to skid more.
- Steer. Turn the steering wheel in the direction you want your car to go. As soon as the vehicle begins to straighten out, turn the steering wheel back the other way. If you do not do so, your vehicle may swing around in the other direction and you could start a new skid.
- Continue to steer. Continue to correct your steering, left and right, until the vehicle is again moving down the road under your control.

The best advice is to do everything you can to avoid ever skidding in the first place. Be aware of weather conditions and slow down well in advance of stopping point when driving on ice or packed snow. During thawing and freezing weather, be alert for slippery areas on bridges and in sheltered areas.

Regaining Control of your vehicle when the wheels have gotten off the paved roadway:

1. Stop feeding the gas. Lift your foot off the gas pedal but do NOT suddenly apply the brake.

2. Maintain a firm grip on the steering wheel, but do NOT jerk the wheel back toward the pavement suddenly.
3. Brake lightly and briefly. Do NOT slam on the brakes or hold the brake pedal down. You want to gradually slow the vehicle.
4. Maintain car control. Keep steering the vehicle straight trying to keep the other wheels from getting off the pavement.
5. Do NOT attempt to steer back onto the pavement until there are no cars in your immediate vicinity.
6. Once oncoming traffic is clear and you have slowed the speed of your vehicle you can turn back onto the pavement sharply.

DRIVING IN RAIN AND FOG

Wet pavement can be as treacherous as icy pavements, so always reduce your speed in wet weather. You will need additional distance for stopping, and you may skid on quick turns.

The pavement is particularly treacherous when it first begins to rain. Accumulations of dirt and oil will mix with the water, and create a greasy film on the highway.

Tires sometimes hydroplane on a wet highway, leaving the car without road contact. When hydroplaning occurs there is a loss of the traction needed to steer and brake safely. Stopping distances may be tripled and steering control may be reduced or lost. How soon hydroplaning begins depends on speed, tire inflation, water depth (even a half-inch or less), road surface, and tire tread. Hydroplaning is more common at higher speeds, although tires can hydroplane under certain conditions at ANY speed. This is one reason you must always be extra cautious when driving in rainy weather.

Both rain and fog create vision problems as well as vehicle control problems. Keep your windshield wipers in good condition, and wait a few seconds after rain starts before you turn them on. There should be enough water on the windshield for the wipers to clear it, not smear it with dust and grime.

If you drive in fog, reduce speed to make up for the reduced visibility. Use headlights on low beam so the light will be on the road where you need it,. In fog or mist, never put you headlights on high beam because the light will be reflected back into your eyes.

RAIN: Drivers often have to change driving habits to adjust to poor driving conditions caused by weather. Rainy weather calls for:

- Slower speed.
- Greater stopping distances.
- Driving with headlights on low beam.
- Use of wipers and defroster as necessary for maximum vision.
- An early signal for all turns or lane changes.
- Braking well in advance of a stop to warn following drivers of your intentions.

FOG: The best advice for driving in fog is “DON’T”. If you must drive:

- Drive with lights on low beam. Never drive with just your parking or fog lights.
- Reduce your speed.
- Avoid crossing traffic unless absolutely necessary.
- Listen for traffic (keep radio off or turned down low and do NOT use cell phone while driving in fog).
- Use wipers and defroster as necessary for maximum vision.
- Be patient! Avoid passing.
- Unless absolutely necessary, do not stop on any roadway.
- If your car stalls or is disabled, move away from the vehicle to avoid personal injury.
- Consider postponing your trip until the fog clears.
- Adhere to warning devices in fog-prone areas.

WHEN DRIVING THROUGH DENSE FOG, HEAVY RAIN OR SNOW DURING THE DAYTIME, TURN ON YOU LOW BEAM HEADLIGHTS. This gives you better visibility and alerts oncoming cars to your presence, it is also a requirement of Tennessee law. Have good operating windshield wipers so that they do an effective job.

DEFENSIVE DRIVING

If every driver always obeyed the rules, and always behaved in a sensible way, driving would be simpler and safer. Unfortunately, this ideal situation does not exist. Instead we frequently encounter drivers who behave unpredictably or recklessly, and other highway users, such as pedestrians and bicyclists, who ignore the rules that apply to them.

To protect yourself, you must learn to drive defensively. This means anticipating errors by others and preparing to compensate for their mistakes. In addition, you must always behave in a correct and sensible fashion yourself so that you do not confuse other drivers.

Drive Alert

The defensive driving rules are simple and easy to follow. If you follow them, you should be able to avoid getting yourself into difficult situations. The rules are:

- Use your rearview mirrors. Constantly check the traffic behind you. Always look in the mirror before you change lanes.

- Stay out of another driver’s blind spot(s). Do not travel in a position where the driver ahead of you cannot observe your vehicle in his mirrors; he might pull out in front of you to pass a car. Either stay far enough behind or pass.
- Expect the other driver to do the **WRONG** thing, and have a plan of action prepared to counter his error.

Drive Cautiously

Remember to always use the two-second rule. Periodically test your following distance by picking out a stationary object on the roadway ahead and doing the “1,001, 1,002” count. Remember if you reach that point before counting to 1,002 you are following too closely. If this is the case slow down somewhat in order to lengthen your following distance. Remember on high speed interstates, when following large commercial trucks or buses and in inclement weather or limited visibility conditions it is safest to increase this following distance to at least 3 to 4 seconds.

Concentration is one of the most important element of safe driving and defensive driving. The driver’s seat is no place for daydreaming, mental napping, window shopping, scenic viewing or distracting conversations. Lack of concentration can result in a driver’s failure to be observant enough to avoid an accident. Driving an automobile is a full-time job. There have been too many accidents after which the driver said (IF he survived), “I don’t know what happened”.

Driving Space or “Safety Cushion”

Always drive in such a manner that you are able to control the space (safety cushion or zone) between your vehicle and others. At times this may mean slowing or increasing your speed (within lawful limits only). Try to maintain a safety cushion to the front, rear and each side of your vehicle at all times in order to provide an area of escape or prevention should an emergency occur.

Adjusting Speed to Conditions

No person shall drive any vehicle upon a highway at a speed greater than will permit him to stop within the assured clear distance ahead. When driving conditions are less than ideal all persons operation motor vehicles on the public highways shall drive at a careful and prudent speed not greater than is reasonable and proper, having due regard for the following conditions:

- **Traffic** - When traffic is heavy, congested or moving slowly.
- **Surface** - When the road surface is rough, icy, wet or otherwise provides poor traction.
- **Width** - When the width of the roadway reduces your margin of safety.
- **Weather** - When weather conditions affect sight distance and traction (rain, snow, fog, dust or smoke).

Any of the above situations would require you to make adjustments to your speed in order to drive safely and defensively.

Slow Speed / Impeding the Traffic Flow - No driver shall drive at such a slow speed as to hold back or block the normal

and reasonable flow of traffic.

Speed Control Benefits Everyone - As your speed increases, so does your car's wind resistance, a big factor in gasoline mileage. Most automobiles get about 28% more miles per gallon on the highway at 50 M.P.H. than at 70 and about 21% more at 55 M.P.H. than at 70.

Driving at moderate speeds also:

- Provides you with better stopping and evasive control in emergency situations
- Helps you to maintain the "safety cushion" around your vehicle.
- Reduces the risk of death or serious injury to victims in the event of a crash or other accident.
- Helps to maintain a safer traffic flow, discouraging others from zipping in and out of lanes recklessly.
- Is a key factor in driving safely and defensively.

Avoid Distractions

You probably know that drinking and driving don't mix. Talking and driving don't mix either. If you use a cell phone when you're driving, you increase your chances of having an accident. In fact, people who use cell phones are four to five times more likely to have a crash than people who don't use cell phones while driving. If you need to use the phone, pull off the road to a safe place first.

It's not the phone itself that's dangerous. It's the fact that while you're using it, you might be taking your eyes off the road or not concentrating on your driving. Anything that distracts you from driving is dangerous. Other things that can take your concentration away from driving through a work zone include:

- Fiddling with the radio
- Trying to get something from the floor or another seat
- Talking to other passengers
- Eating
- Reading
- Putting on makeup, shaving or other personal care

NIGHT DRIVING

The basic rule for safe night driving is this: **NEVER OUTRUN YOUR HEADLIGHTS.** Your stopping distance should always be less than your sight distance. The law requires headlights which will enable you to see clearly any person on the highway at least two hundred (200) feet ahead of your car. Since the effectiveness of headlights diminishes greatly as the distance increases, headlights must be in good order to meet this requirement. They must also be accurately aimed, with clean lenses and a clean windshield inside and out.

Driving at night is considerably more hazardous and difficult than daytime driving. Remember that your range of visibility is limited by your headlights. It is doubtful that you can identify the position, distance and nature of an object within the few seconds it takes for your vehicle to travel several hundred feet. To cope with oncoming traffic during the hours of darkness you should:

- Develop the ability to glance well in front of your headlight beams, looking for dark shapes on the roadway.
- Glance periodically to the right and left to determine the location of the edge of the pavement and oncoming vehicles
- Avoid looking directly into oncoming headlights which causes momentary blindness from the glare.

Remember to drive safely and defensively you must adhere to the proper requirements of dimming your lights at night when:

- Meeting or overtaking vehicles within 500 feet.
- Driving in cities and towns always use your low beams
- On curves or turns to the right avoid "blasting" and oncoming car with your high beams.

Parking At Night

When parking at night, never leave your headlights on. They are just as likely to blind approaching drivers when your car is stationary as they are when it is moving. They may also confuse approaching drivers as to the exact position of the road. The danger is increased if you are parked on the wrong side of the roadway. Whenever you park on or along a highway at night, leave your emergency and parking lights on.

SHARING THE ROAD SAFELY

11

The Road Has Many Users

Our streets and highways are becoming more crowded every day. Drivers are not the only people using these roadways. They share the highways with many other users:

- Pedestrians
- Bicyclists
- Motorcyclists and moped riders
- Large trucks and buses
- Even animals

Other people have certain rights and privileges on the highways of which automobile drivers must be aware and must respect.

As a driver or user of the road, you need to know and practice the rules for sharing the road safely and defensive driving.

You should always be aware of the traffic around you and be prepared for emergency situations. A two-ton automobile can be a dangerous weapon. Use common sense and courtesy with other highway users.

Your responsibility as a defensive driver includes making allowances for and adapting to the other people and vehicles on the road. There are skills and techniques you should use for sharing the road. Knowing what to do and how to do it can help you stay alive and avoid damaging your car or someone else's vehicle or causing bodily injury to other highway users.

SHARING THE ROAD WITH PEDESTRIANS

"Pedestrians" include people walking, skateboarders, in-line or roller skaters, and the disabled who use wheelchairs, walkers, tricycles, or similar supports. As a driver you must recognize the special safety needs of pedestrians. You should be especially alert for young, elderly, disabled and intoxicated pedestrians. They are the most frequent victims in auto-pedestrian collisions.

Generally, pedestrians have the right of way at all intersections. There is a crosswalk at every intersection, even if painted lines and boundaries do not mark the crossing. Crosswalks are intended to encourage people to cross only at certain locations. As you know, some people will cross when and where they want to, regardless of traffic signals, marked crossings, or even their own safety. As the person controlling a potentially dangerous machine, it's your job to "play it safe" where pedestrians are concerned and protect them when you see they may be in danger. Regardless of the rules of the road or right-of-way, the law specifically requires YOU, as a driver, to exercise great care and extreme caution to avoid

striking pedestrians.

Your Role as a Driver:

Drivers should not block the crosswalk when stopped at a red light or waiting to make a turn. You also should not stop with a portion of your vehicle overhanging the crosswalk area. Blocking a crosswalk forces pedestrians to go around your car, and puts them in a dangerous situation.

- Be alert to people entering the roadway or crosswalks any place where pedestrian traffic is heavy.
- Be alert to pedestrians to the right of your vehicle and be especially watchful for pedestrians when you are making a right turn.
- You must immediately yield to pedestrians as soon as they step off the curb into the roadway when the pedestrian is on your half of the road/lane or so close to your half of the road that he is in a position of danger.
- Always yield to blind pedestrians carrying a white, metallic, red tipped white cane or using a guide dog.
- Children are often the least predictable pedestrians and the most difficult to see. Take extra care to look out for children in residential areas and at times and places where children are likely to be around. Be especially carefully in school zones, school crossings, or anywhere children are playing (playgrounds, parks, near ice cream or snack vendor vehicles/carts, etc.)
- Yield to pedestrian walking on the sidewalk when you're entering or leaving a driveway, public parking garage, alley or parking lot.
- Don't honk your horn, gun your engine, or do anything to rush or scare a pedestrian crossing in front of your

car, even if you have the legal right-of-way.

Your Role as a Pedestrian:

Most of us cross streets every day. We take for granted that we can cross without incident, because most of the time we do. But sometimes we aren't so fortunate. Each year 7,000 pedestrians die and 100,000 are injured in traffic accidents. Young children and the elderly are more likely to be killed or injured in a pedestrian crash.

While it is easy to blame drivers, they are not always

responsible for these accidents. All too often, pedestrians are the cause of such accidents. These senseless tragedies don't have to happen. You can avoid potential injuries and even death by reviewing the advice for safe street crossing. You too will be a pedestrian on occasion. So learn and obey the common sense rules when the roles are reversed.

When you are a pedestrian, do all you can to make yourself visible and to help drivers prevent crashes.

WALKING

- Pedestrians must walk along sidewalks when available. It is unlawful for pedestrians to walk IN the road where there are sidewalks.
- When there are no sidewalks, always walk on the left side of the road facing traffic (the traffic should be coming toward you), this allows you to see any sudden dangers coming at you. Two or more pedestrians should walk in single file and never side by side of each other.
- Wear or carry something white – do not assume that drivers can see you. At night, remember that it is more difficult for drivers to see you; do everything you can to make yourself visible to drivers – use a flashlight or wear clothing reflectors.
- Be alert and ready to move out of the way in case a driver cannot see you. It is not a good idea to walk or jog along busy roadways while wearing radio headphones or listening to a portable disc player. You may not hear important traffic sounds that would help you avoid potential dangers.

CROSSING

- **Before crossing, stop** at the curb, edge of the road, or corner before proceeding.
- **Look left-right-left**, and if it's clear, begin crossing, looking over your shoulder for turning vehicles.
- Continue to check for approaching traffic while crossing.
- At intersections with traffic lights and pedestrian signals, it's important to follow the signals carefully. Pedestrians may cross on a green traffic signal or when you see the WALK signal, following, again, the basic rules for crossing.
- A flashing DON'T WALK signal indicates you shouldn't start to cross the street. However, if you are in the middle of the street and the DON'T WALK signal starts flashing, continue walking. You will have time to complete the crossing.
- Pedestrians may NOT cross on a red or yellow traffic light, or on a red-green (i.e. red for turn(s) while green for straight traffic, or vice versa) combined light, unless facing a WALK signal.
- On a green arrow, whether alone or accompanied by a steady red or yellow, you may enter the road ONLY if you can do so safely without interfering with vehicle traffic.
- If you see a steady DON'T WALK signal, don't begin to

cross the street! Wait for the next WALK signal.

- The WALK signal and the green traffic light indicate that it's your turn to cross the street, but they do NOT mean it is SAFE to cross. The WALK signal and the GREEN light mean LOOK, and then, IF it's safe, proceed to cross.
- Although drivers must yield to pedestrians crossing the roadway, pedestrians must not suddenly leave a curb or other safe waiting place and walk into the path of vehicle traffic if it is so close that it is an immediate hazard. Vehicles cannot stop at once! A pedestrian crossing the road between intersections, except at marked crosswalks, must yield the right-of-way to all vehicles on the roadway.

Remember to make eye contact with drivers to ensure they see you. Don't take a walk signal, a green traffic light, or a driver for granted. Crossing safely is YOUR responsibility. Remember, it's up to you.

Sharing The Road With Bicycles

Bicyclists have the same rights and responsibilities on the streets that drivers do, and in most cases, they must share the lane.

Bicycles are required to travel on the right hand side of the road with other traffic.

Bicyclists are not allowed

to travel facing traffic, since this is far less safe. They must ride as near to the right hand side of the road as practical, while avoiding road hazards that could cause them to swerve into traffic. When you're sharing the road with bicycles, you should always expect the rider to make sudden moves. Trash, minor oil slicks, a pothole or crack in the concrete, a barking dog, a parked car or a car door opening, and other surprises can force a bicycle rider to swerve suddenly in front of you.

Similarly, when cyclists are traveling past parked cars, they tend to move away from the cars, toward the center of the lane. This is to avoid injuring, or being injured by, persons getting out of those cars. In such cases, the bicyclist is operating the bicycle properly. If possible, give the cyclist the entire lane. When road conditions prevent this, pass the cyclist with extreme caution. Cyclists who are not on the extreme right hand side of the lane are not being careless, but are in fact attempting to account for traffic conditions and/or preparing to make a left turn.

Bicycles are hard to see. The riders are exposed and easily injured in a collision. Oncoming bicycle traffic is often overlooked or its speed misjudged.

Safety Tips for Drivers:

- The most common causes of collisions are drivers turning left in front of an oncoming bicycle or turning right, across the path of the bicycle.
- Drivers often fail to pick the bicyclist out of the traffic scene, or inaccurately judge the speed of cyclists making a left turn.

- Drivers overtaking a bicyclist, then making a right turn in front of the cyclist is also a cause of many accidents. Look once, then again, make sure you see the cyclist and know his speed before you turn.
- Merge with bicycle traffic when preparing for a right turn. Don't turn directly across the path of a bicyclist.
- Watch for bicycle riders turning in front of you without looking or signaling, especially if the rider is a child.
- Most bicyclists maintain eye contact with drivers of vehicles around them, particularly when the cyclist or vehicle is making a turn. Before turning, a driver should attempt to gain and maintain eye contact with the bicyclist to ensure a safer turn.

- **Allow plenty of room when passing a bicycle rider.**

- A driver should NEVER attempt passing between a bicyclist and oncoming vehicles on a two-lane road. Slow down and allow vehicles to pass. Then move to the left to allow plenty of room to pass the rider safely. Leave at least three feet of space between your car and a cyclist when passing.
- NEVER pass a bicycle if the street is too narrow or you would force the bicyclist too close to parked vehicles. Wait until there is enough room to let you pass safely.
- If you are about to pass a bicycle on a narrow road and you think the rider doesn't know you're coming, tap your horn gently and briefly as a signal that you're going to pass. Don't blast your horn or otherwise startle or try to intimidate the rider.

- **Residential Areas Are Danger Zones:**

Bicyclists may ride in the middle of the street and disregard stop signs and traffic signals. BE CAREFUL in all neighborhood areas where children and teenagers might be riding.

- Children riding bicycles create special problems for drivers. Children are not capable of proper judgment in determining traffic conditions, therefore drivers should be alert to the possibility of erratic movement and sudden changes in direction when children on bicycles are present.
- Watch out for bikes coming out from driveways or from behind parked cars or other obstructions.
- Bicyclists riding at night present visibility problems for drivers. At night, watch the side of the road for bicyclists. Bicyclists are required to have proper illumination, a front light and rear reflector, but drivers should be aware that bicyclists are not easily seen. Lights from approaching traffic may make them even harder to see at night.
- If you see a bicyclist with a red or orange pennant flag on an antennae attached to the bike, slow down; this is a common symbol to indicate the rider has impaired hearing.

Lane Positions for Bicycles:

Bicycle riders are required to ride as far right in the lane as possible only when a car and a bicycle, side by side, can safely share the lane. Even then, there are certain times when a bicycle can take the full lane. **A bicyclist should be allowed full use of the lane when:**

- The rider is overtaking and passing another vehicle going in the same direction.
- If the lane is marked and signed (as shown at right) for bicycle use only, drivers must NEVER use that lane as a turning lane, passing lane or for parking.
- The bicyclist is getting in place for a left turn at an intersection or turning left into a private road or driveway.
- There are unsafe conditions in the roadway, such as parked cars, moving vehicles or machinery, fixed obstacles, pedestrians, animals, potholes or debris.
- The lane is too narrow for both a car and a bicycle to safely share the lane. In this case, it is safest to let the bicycle take the full lane.

To learn more specifics on bicycle riding and safety contact:

SHARING THE ROAD WITH MOTORCYCLES

Research shows that two-thirds of car-motorcycle collisions are caused, not by the motorcyclist, but by the driver, who turned in front of the motorcycle. The drivers didn't see the motorcycles at all or didn't see them until it was too late to avoid the collision.

Why Drivers Don't Always See Motorcyclists

Drivers tend to look for other cars and trucks, not for motorcycles.

The profile of a motorcycle is narrow and the body is short, making it harder to see and making it harder for a driver to estimate the cycle's distance and speed.

Motorcycle riding requires frequent lane movements to adjust to changing road and traffic conditions.

Motorcycles have the right to the use of the full lane. Riders need the lane's full width to respond to and handle hazards such as potholes, shifting traffic blocking their view or blocking them from being seen, and strong winds or blasts of air from passing vehicles. You must never try to share a lane with a motorcycle, and you should always respect the cycle's space and position in traffic.

Driver Tips for Sharing the Road with Motorcycles:

- **Passing** – Pass as you would pass a car, and don't pass too close or too fast, as the blast of air can blow a motorcycle out of control.
- **Left turns** – Always signal your intention to turn. Watch for oncoming motorcycles.
- **Following Distance** – Allow at least a two-second following distance, so the motorcycle rider has enough

time to maneuver or stop in an emergency. Both cyclists and drivers are more likely to make bad decisions if there is not enough stopping distance or time to see and react to conditions.

- **Check you Blind Spots when Changing Lanes** – Motorcyclists riding alongside a lane of cars are often out of the view of the driver. An unsuspecting driver may change lanes and clip or hit a motorcycle.
- **Anticipate Motorcyclists' Maneuvers** – A cyclist will change lane position to prepare for upcoming traffic conditions. Expect and allow room for the rider to adjust to road hazards that you can't see. At intersections, where most collisions and injuries occur, wait until the rider's intentions are absolutely clear (turning or going straight) before you move into the path of travel. Be even more careful in difficult driving conditions – rain, wet roads, ice, and heavy winds – when the motorcyclist's braking and handling abilities are impaired.
- **Pay Extra Attention at Night** – You can easily misjudge distance because the single headlight and single tail light of a motorcycle can blend into the lights of other vehicles. Always dim your headlights as you would for cars and trucks.
- **Drive Aware** – Whenever you are on the road or at an intersection with a motorcycle, use extra caution and care. Learn to watch for the narrow profile.

Hazards that can affect Cyclists' Maneuvers:

Special conditions and situation may cause problems for cyclists (both bicycle and motorcycle), which drivers need to anticipate. Drivers should be aware of these problems, so they can help share the road safely with cyclists. Here are a few examples:

- Bad weather and slippery surfaces cause greater problems for cyclists than for cars. These conditions create stability problems for all vehicles. Allow more following distance for cyclists when the road surface is wet and slippery. Also be alert to the problem of glare that rain and wet surfaces create, especially at night.
- Strong cross winds can move a cycle out of its lane of travel. Areas where this can happen are wide open, long stretches of highways and bridges. Large, fast-moving trucks sometimes create wind blasts which, under certain conditions, can move the cyclist out of his or her path of travel.
- Railroad grade crossings are a particular hazard to cyclists, and will usually cause them to slow down and possibly zigzag to cross the tracks head on.
- Metal or grated bridges cause a cycle to wobble much more than a car. An experienced cyclist slows down and moves to the center of the lane to allow room for handling the uneven surface. An inexperienced cyclist may become startled and try to quickly change direction. Be prepared for either reaction.

Being aware of these situations and consciously looking for cyclists can help you share the road safely with both bicycles and motorcycles.

To learn more about motorcycle safety, pick up a copy of the Tennessee Motorcycle Operator Manual at any Driver License Station. Good information is also available at: www.state.tn.us/mrep.

SHARING THE ROAD WITH LARGE TRUCKS AND BUSES

You will always be sharing the road with trucks because they haul more freight more miles than any other form of transportation. Trucks are the sole method of delivery and pickup for 77% of America's communities.

A typical tractor-trailer combination, a power unit pulling a loaded semi-trailer hinged to its rear end, may weigh up to 80,000 pounds. Depending on the trailer length, the total length of the combination may exceed 70 feet. On the busiest intercity routes, a driver may encounter double or even triple-trailer combinations sometimes exceeding 100 feet in length.

Trucks were involved in only 12% of fatal accidents nationally in 1996. However, research reveals that passenger car drivers made mistakes in 70% of those fatal crashes involving large trucks. While everyone may make a mistake once in a while, colliding with a truck or bus could be your last one. When driving on the highway you are at a serious disadvantage if involved in a crash with a larger vehicle. In crashes involving large trucks, the occupants of a car, usually the driver, sustain 78% of fatalities.

Many truck-car crashes could be avoided if drivers know about truck (and bus) limitations and how to steer clear of unsafe situations involving large vehicles. Seems obvious, doesn't it? But the fact is that while most people realize that it is more difficult to drive a truck than a car, many don't know exactly what a truck's limitations are in terms of maneuverability, stopping distances, and blind-spots. Remember: Large trucks, recreational vehicles, and buses are not simply big cars. The bigger they are:

1. The bigger their blind spots, trucks have deep blind spots in front, behind and on both sides.
2. The longer it takes them to stop, a car traveling at 55 M.P.H. can stop in about 240 feet; however, a truck traveling at that speed takes about 450+ feet to stop.
3. The more room they need to maneuver, such as making right turns. Trucks must swing wide to the left to safely negotiate a right turn. They cannot see cars behind or beside them.
4. The longer it takes an automobile to pass them.
5. As stated above the more likely you are to be the "loser" in a collision.

Truck drivers are always watching for smaller vehicles and working to avoid collisions. There are some techniques that you can use to help them – and yourself – share the road safely and reduce the likelihood of a collision with a large vehicle.

Do NOT enter a roadway in front of a large vehicle, a truck or bus can't slow down or stop as quickly as an automobile. By pulling out in front of these vehicles you could easily cause a rear-end collision.

Avoid driving directly behind a truck or bus. Keep a reasonable distance between your car and the large vehicle ahead; this way you will have a better view of the road to

anticipate problems, and you will give yourself room for an emergency “out”.

- Do NOT cut abruptly in front of a large vehicle; if you are exiting, it will only take a few extra seconds to slow down and exit behind the truck. Cutting off a large vehicle on the Interstate is particularly dangerous because of the high speeds being traveled.
- When passing a large vehicle do not pull back over into the lane in front of the truck unless you can see the whole front of the vehicle in your rearview mirror. Do NOT slow down once you are in front of the truck.
- Position your vehicle so you are outside the truck driver’s “blind spots”, and be sure the truck driver can see YOU in the side rearview mirror. If you can’t see the truck’s mirror, the driver can’t see YOU. A truck’s blind spots are immediately in front, on either side of the car, and up to 200 feet in the rear. A trucker may not be able to see the road directly in front of the cab. If the tractor has a long hood, the trucker may not be able to see the first 10-20 feet in front of the bumper – plenty of room for a car to slip unnoticed into a dangerous position.
- If you’re stopped behind a truck on an uphill grade, stay to the left in your lane so the driver can see you. When stopped in a traffic lane, leave extra space in front of your car in case the truck rolls back when it starts to move.
- Pay close attention to the large vehicle’s turn signals. Because trucks make wide right turns, they need to swing to the left before turning right – make sure you know which way the vehicle is turning before trying to pass.
- Do not linger beside a large vehicle, because you may not be visible to the driver in the wide area the truck needs for maneuvering a turn.
- When you are near a Commercial Vehicle Weigh Station, avoid driving in the right lane so slow-moving trucks can easily merge back onto the roadway.
- Dim your lights at night. Bright lights reflected in the mirrors can blind the driver.
- In rainy conditions, stay back. Spray and splash back from the rear wheels can cover your windshield with sheets of water, mud and road film.
- Never underestimate the size and speed of approaching trucks or buses. Because of their large size they often appear to be traveling more slowly than their actual speed.

Risky Situations with Large Vehicles

Passing a Large Vehicle: A tractor-trailer or other combination vehicles, takes a longer time and requires more space to get around than passing a car.

- On a two-way road, leave yourself more time and space when passing these large vehicles. Check to your front and rear and move into the passing lane only if it is clear and you are in a legal passing zone.
- Make sure you can see the whole front of the vehicle before returning to its lane after passing. If the truck or bus driver blinks the truck’s lights after you pass, it’s a signal that you are cleared to pull back in front of the truck. Move back only when you can see the front of

the truck in your rearview mirror.

- Remember that on an upgrade or steep hill, a large vehicle usually loses speed. Look far ahead when driving. In case you will need to pass a large vehicle ahead of you, be prepared by knowing in advance when you are approaching an incline that may cause the other vehicle to slow down.
- Because of their weight, trucks travel faster downhill and you may have to increase your speed to pass a truck on a downhill grade. Complete your pass as quickly as possible and don’t stay alongside the truck. After you pass, maintain your speed. Don’t pass a truck, then slow down, making the truck driver brake while traveling downhill.
- When a truck passes you, you can help the driver by keeping to the far side of your lane and reducing your speed slightly. NEVER SPEED UP AS A TRUCK OR BUS IS PASSING.
- When you meet a truck/bus coming from the opposite direction, keep as far as possible to the right of the road to avoid being sideswiped and to reduce wind turbulence between vehicles. The turbulence PUSHES vehicles APART, it does NOT suck them together.

The “Right Turn Squeeze”:

Trucks make wide right turns and often must leave and open space on the right side. Do NOT move into that space or try to pass a truck if it might be making a right turn. With any turning vehicle, the rear wheels follow a shorter path than the front wheels; the longer the vehicle, the greater the difference in the width and distance of this path. If you are between the truck and the curb, the driver may not be able to see you and your car can be crushed or sideswiped by the truck’s trailer.

A Truck Backing Up: When a truck is trying to back into a loading dock, there may be no choice except to block the roadway for a short time. Never try to cross behind a truck when it is preparing to back up. This is a high-collision situation because you will be in the driver’s blind spots. Give the driver plenty of room and wait patiently for the few minutes it takes to complete the maneuver.

Maintaining a Safety Cushion with Large Vehicles: As stated previously trucks and buses need more maneuvering room and stopping distance than small vehicles. A good safety strategy for car drivers is to leave plenty of space between your car and the larger vehicle, especially in these situations:

If you are driving in front of a truck, keep your speed up so that you maintain a safe distance in front of the truck. Always indicate your intention to turn or change lanes early enough for the driver of the truck or bus to prepare for your maneuver. Avoid sudden moves, slow downs or stops.

Don’t cut in front of a truck or bus, or you remove the driver’s cushion of safety.

When following a truck or bus, it is a good idea to add

more following distance. A safety cushion of at least 3 to 4 seconds is recommended.

If rain or water is standing on the road, spray from a truck passing you, or one you are trying to pass, will seriously reduce your vision. You should move as far away from the truck as you can, while staying in your lane.

Don't drive too close to trucks that are carrying hazardous materials, since they make frequent stops, such as at railroad crossings.

Hills or Mountain Roads: Beware of dangers caused by slower moving trucks or buses on steep hills or mountain roads. Watch for slow moving trucks or buses going both up and down hills. Heavy vehicles cannot maintain speed when climbing hills and must go slowly down hills to stay under control.

Watch for trucks or buses that may be in trouble. Smoking wheels or a high speed can be a sign of brake loss. If you encounter this situation, fall back, and DO NOT pass.

Runaway ramps: These ramps are designed to stop out-of-control trucks or buses going down steep downgrades. Vehicles should never be stopped or parked in these areas.

Learn the "NO ZONES" for large vehicles:

Many motorists falsely assume that trucks and buses can see the road better because they sit twice as high as the driver of a small vehicle. While trucks and buses do enjoy a better forward view and have bigger mirrors, they have serious blind spots into which a small vehicle can disappear from view.

An excellent rule for motorists sharing the road with trucks and buses is: if you can't see the truck or bus driver in the side mirror of the truck or bus, the driver probably can't see you.

Another good tool is the NO-ZONE. The NO-ZONE represents danger areas around trucks and buses where crashes are more likely to occur.

1. The area approximately up to 20 feet directly in front of a large vehicle is considered a NO-ZONE. When small vehicles cut in too soon after passing or changing lanes, then abruptly slow down, trucks and buses are forced to compensate with very little time of room to spare.

2. Unlike small vehicles, trucks and buses have deep blind spots directly behind them. Avoid following too closely in this NO-ZONE. If you stay in the rear blind spot of a large vehicle, you increase the possibility of a traffic crash. The truck/bus driver cannot see your car, and your view of the traffic ahead will be severely reduced.
3. Large vehicles have much larger blind spots on both sides than cars do. When you drive in these blind spots for any length of time, the vehicle's driver cannot see you. When

passing even if the vehicle's driver knows you are there, remaining alongside a large vehicle too long, you make it impossible for the driver to take evasive action if an obstacle appears in the roadway ahead. If the truck or bus driver needs to swerve or change lanes for any reason, a serious crash could occur if any vehicle is in either of these NO-ZONES.

4. Truck and bus drivers often cannot see vehicles directly behind or beside them when they are attempting to safely negotiate a right turn. If you cut in between the truck or bus and the curb or shoulder to the right it greatly increases the possibility of a crash in this "right turn squeeze".

For more details on operating commercial trucks or buses pick up a copy of the Tennessee Commercial Driver License Manual at any Driver License Station. Also more safety information is available through U.S. Department of Transportation at:

SHARING THE ROAD WITH TRAINS

Actually, you don't share the road with trains – you stop and let them have the right-of-way!

You can stop your car suddenly

but a train can't. **Drivers**

must ALWAYS yield to trains because that's the law.

- The average car weight 3,000 pounds, and the average loaded train weighs 12 MILLION pounds!
- A train traveling at 55 M.P.H. takes a full mile to stop.
- You are 30 times more likely to die in a collision with a train than in a crash with a car or even a large truck or bus.

A train collision is ALWAYS the fault of the car driver. Over half the car/train collisions in America happen at crossroads with lights, bells, or gates; and two-thirds of the crashes happen in full daylight.

Why?

Impatience – Drivers don't want to wait the 30 seconds to 2 minutes average time it takes for the train to pass through the intersection. They try to beat the train. In 1996 across the U.S., over 4,000 cars and trucks were hit at crossings because the trains beat them. More than 1,500 drivers and passengers were hurt and 415 died. Don't let yourself or your family and friends be one of these statistics.

Negligence – When drivers see a railroad crossing sign or warning, they don't respect the potential for danger; they

cross the tracks without looking, listening, or stopping. Most of the collisions occur within 25 miles of the driver's home, suggesting that drivers KNEW the tracks were there and they were in the habit of crossing without looking.

Statistics from the U.S. DOT Federal Railway Administration's 2001 Annual Report indicate that during the six (6) year periods from 1996 to 2001 nearly 11,000 incidents occurred at public Highway-Rail crossings in the United States.

Totals	Fatalities	Injuries	Total Incidents
U.S.	2,628	8,222	10,850
TN	57	177	234

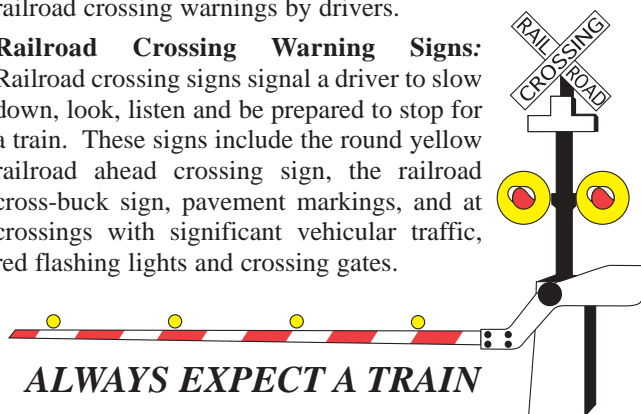

If you are on a collision course with a train, only YOU can avoid the collision. The train cannot stop in time or swerve to avoid you.

Stopping For Railroad Crossings

Countless people lose their lives or suffer tragic injuries due to train/vehicle collisions. Invariably, the cause for such collisions is the disregard, and often the willful evasion, of railroad crossing warnings by drivers.

Railroad Crossing Warning Signs:

Railroad crossing signs signal a driver to slow down, look, listen and be prepared to stop for a train. These signs include the round yellow railroad ahead crossing sign, the railroad cross-buck sign, pavement markings, and at crossings with significant vehicular traffic, red flashing lights and crossing gates.

Railroad Crossing Stop Signs: If you approach a railroad crossing at which a stop sign is posted, you must come to a complete stop and proceed across the tracks only after looking both ways to make sure a train is not approaching. Never assume the track is not used or a train is not approaching.

Safety Guidelines for Railroad Crossings:

Obey the Warning Signs: Look both ways and **LISTEN**, because you may have to stop. Expect a train on any track at any time. Don't trust a "schedule" because trains can cross at any time. Due to the size of trains, the actual speed of a train can be very deceiving.

Don't Attempt to "Beat the Train": Under no circumstances attempt to race a train to a crossing. If you lose, you will never race again.

Don't Try to "Evade the Gates": Never drive around a crossing gate that has extended down. If the gates are down, stop and stay in place. It's against the law to drive through lowered gates. Don't cross the tracks until the gates are fully raised and the lights have stopped flashing.

When Approaching a Railroad Crossing: Slow down far enough ahead of the crossing to be certain that you can stop when you reach the point where a train could first be

seen. Railroad crossings equipped with electric or mechanical signal devices require the operator to bring his vehicle to a complete stop within 50 feet, and no closer than 15 feet from the nearest rail and shall not proceed until he can do so safely.

Avoid Stopping on the Railroad Tracks: Never proceed to cross the tracks unless you can legally clear all tracks without stopping. If you are crossing the tracks and the warning lights begin flashing or the gates start coming down, don't stop. **KEEP MOVING!** The warning signals will allow enough time for you to finish driving through the crossing before the train arrives. The gate on the far side of the tracks

will not block you in. Do NOT try to back up.

If your vehicle stalls on the tracks, all occupants should exit the vehicle immediately and get off the tracks. If a train is coming, get away from the tracks and run toward the direction from which the train is coming (away from the point of impact) as shown in the illustration below. If no train is in sight, post lookouts and try to start the vehicle or push it off the tracks. If you are alone notify local law enforcement for assistance. Look to see that no train is approaching the crossing and carefully proceed to have the vehicle removed from the tracks.

*Your car is replaceable. You aren't!!
No vehicle is worth a human life.*

Watch for Additional Trains: Where there is more than one track, a driver waiting for one train to pass must make sure another train is not approaching from the opposite direction. Once the first train has cleared the tracks, caution should be taken that a second train is NOT proceeding in the opposite direction. Don't go across the tracks until you are sure that no other train is coming on another track from either direction.

Watch for Vehicles that Must Stop at Highway- Railway Crossings: School Buses, Passenger Buses and Trucks carrying hazardous materials must stop at all crossings whether signals are activated or not. Never attempt to pass such a stopped vehicle on a two-way road. For safety's sake do NOT pass such stopped vehicles on a multi-lane roadway unless the crossing is clearly marked with signal lights and/or gates that are NOT activated. Otherwise the stopped vehicle in the right lane may block your clear view of the tracks.

Intersection Warning Signs: Some variation of the sign shown at right will be posted prior to intersections or crossroads where railroad tracks cross one of the roadways.

Always be alert and pay attention to these signs as they give you advance warning that you may encounter a train if turning onto the road indicated in the sign.

Tennessee Operation Lifesaver at: www.tnol.org

SHARING THE ROAD WITH SCHOOL BUSES

School buses are one of the safest forms of transportation in the nation – nearly 2,000 times safer than the family car. Accidents are rare because school districts and the school bus contractors who serve them work hard to train drivers to avoid accidents.

The reality of school bus safety is that more children are hurt outside a bus than inside one. **Children are at the greatest risk when they are getting on or off the school bus.** Most of the children killed in bus related crashes are pedestrians, five to seven years old; they are hit by the bus or by motorists illegally passing a stopped school bus. In fact pedestrian fatalities while loading and unloading school buses accounted for nearly three out of every four fatalities.

The child who bends over to retrieve a dropped school paper, or who walks too closed to the bus while crossing the street, needs to be aware that every yellow school bus is surrounded by a danger zone.

This Danger Zone is the area on all sides of the bus where children are in the most danger of being hit. Children should stay ten feet away from the school bus and NEVER go behind the bus.

In many school districts, children are taught to escape from that zone by taking five giant steps as soon as they leave the bus. If they must cross the street after exiting, they are taught to cross at least five giant steps in front of the bus – and

to be sure they're able to be seen by the school bus driver and can maintain eye contact with the driver.

Perhaps the most difficult thing to teach children, especially young children, is not to go back to pick up items they've dropped near the bus, or left on the bus.

Parents and other adults must also do their part. ***For instance, most drivers need to learn to share the road with school buses and stop when the bus stops to take on or let off passengers.*** If we all do our part – if drivers heed school bus warning lights, bus drivers drive defensively, parents help their children learn to ride safely and children learn to avoid the bus's danger zone – it can be safer still to ride to and from school in that yellow bus.

Safety Tips For Drivers

- Drivers must be familiar with the Danger Zone. Since children are taught to take the “five giant steps” from the school bus for safety, drivers must ensure that they stop far enough from the bus to allow for this needed safety space. **Stay at least 20 feet away from any stopped school bus.**
- **STOP** when the bus's warning lights are flashing, or the stop arm comes out.
- When backing out of a driveway or leaving a garage, **watch out for children** walking to the bus stop or walking or bicycling to school.
- **Slow Down.** Watch for children walking in the street, especially where there is no sidewalk. Watch for children playing and gathering near bus stops.
- **Be Alert.** Children arriving late for the bus may dart into the street without looking for traffic.
- **Obey School Zone Speeds.** Be sure to pay attention to posted speed zones near schools and slow to the proper speed limit when the zone warning lights are flashing and/or during posted hours if not equipped with warning lights.

When driving in neighborhoods and especially in school zones, and near bus stops; **watch out for young people** who may be thinking about getting to school, but may not be thinking about getting there safely or the traffic around them. In these areas, drivers need to take special care because children do not behave like adults. Most school age kids do not fully understand the danger posed by traffic. In fact every driver should remember the following about elementary school children:

- They become easily distracted and may start across the street without warning.
- They don't understand the dangers of moving vehicles
- They can't judge vehicle speeds or distances.
- They may be blocked from your view by the bus or other objects, shrubs, trees, or parked vehicles.
- **MOST IMPORTANTLY, CHILDREN EXPECT VEHICLES TO STOP FOR THEM AT THE SCHOOL BUS STOP.**

Safety Tips For Children

- When you get off, take five giant steps away from the bus, out of the danger zone.

- Cross in front of the bus, and make sure you maintain eye contact with the driver.
- Never go back for anything and never bend down near or under the bus.

Safety Tips For Parents

- Assure your children you won't get mad if they don't go back for a jacket they've left on the bus or school work they've dropped under a wheel
- Encourage them to sit quietly in their seat and follow the driver's instructions on bus safety.

SHARING THE ROAD WITH SLOW-MOVING VEHICLES

Be alert for slow-moving vehicles, especially in rural areas. Driving on empty rural highways can be just as dangerous as driving in heavy city traffic. It is easy to relax your attention...and suddenly come upon a dangerous surprise. Animals in the road, farm equipment moving from one field to another, horse drawn vehicles just over the crest of a hill, or a low spot covered with water are not unusual hazards in rural driving.

Stay alert, watch for warning signs, and slow down when approaching curves or hills that block your view of the roadway ahead. The "slow moving vehicle" emblem, a fluorescent or reflective orange triangle, must be displayed on the rear of vehicles drawn by animals, and most farm vehicles and construction equipment. Use caution when approaching a slow moving vehicle and be sure it is safe before you pass. Be especially alert for:

Farm Machinery: Watch for tractors, combines, and other farm equipment moving across the road and traveling on state highways in rural areas. This type equipment can be very large and wide enough to take up more than one traffic lane. Farm machinery usually does not have turn signals and to make a wide right turn, operators of farm machinery may first pull to the left, then turn to the right. In most cases, these vehicles will be traveling at less than 25 M.P.H. Coming over the top of a hill at 55 M.P.H. to find a large slow-moving tractor in front of you is a frightening and dangerous experience. Expect the unexpected and be prepared to protect yourself and your passengers. Be sure to maintain a safe following distance that provides an adequate field of vision of the roadway ahead when preparing to pass such vehicles.

Horse Drawn Carriages: In some areas of Tennessee you may be sharing the road with animal-drawn vehicles. They have the same rights to use the road as a motor vehicle and must follow the same rules of the road. They are subject to

heavy damage and injury to the occupants if hit by a car. Warning signs will be posted in areas where you are likely to find animal-drawn vehicles. Be Alert!

Horseback Riders: Horseback riders are subject to, and protected by, the rules of the road. They also must ride single file near the right curb or road edge, or on a usable right shoulder, lane or path. The law requires you to exercise due care when approaching a horse being ridden or led along a road. Areas where horseback riding is common will usually be marked with an advisory sign like the one shown above. You must drive at a reasonable speed, and at a reasonable distance away from the horse. Do NOT sound your horn or "rev" your engine loudly when approaching or passing a horse.

SHARING THE ROAD WITH HIGHWAY WORK ZONES

Work Zone Safety: It's Everybody's Business

Work zones on U.S. highways have become increasingly dangerous places for both workers and travelers, with the death rate approaching two per day. Approximately 40,000 people per year are injured as a result of crashes in work zones. With more than 70,000 work zones in place across America on a given day, highway agencies are realizing that it is not enough to focus on improving the devices used in the work zone areas, but that they must also reach out to the public in order to change the behavior of drivers so that crashes can be prevented.

What is a Work Zone? A work zone is any type of road work that may impede traffic conditions. Many work zones involve lane closures. They may also be on the shoulder or in the median. Moving work zones such as sweepers or line painting trucks are also quite common.

Highway work zones are set up according to the type of road and the work to be done on the road. There are a number of events that make up a work zone. They can be long-term projects of short term actions. A work zone can also exist at anytime of the year. The common theme among work zones is the color orange. Work zone materials such as cones, barrels, signs, large vehicles, or orange vests on workers give you an indication that you are either approaching a work zone or are already in a work zone.

What do you do when approaching a Work Zone? Watch for the color orange – it always means road work. All temporary signs in work zones have an orange background and black

letters or symbols. These signs will be found on the right side of the road, or on both left and right sides when the roadway is a divided highway, and they will tell you what (one lane traffic, uneven lanes, etc.) and how soon (miles or feet ahead) you will encounter the work zone. Most work zones also have signs alerting you to reductions in the speed limit through the work zone.

These speed reductions are necessary for the safety of the

workers and motorists. The reduced speed limits are clearly posted within the work zone and if there are no reduced speed limit postings, drivers should obey the normal posted speed limit. Under Tennessee law, speed violations that occur in the work zones where the speed has been reduced and where employees of the DOT and/or construction workers are present will result in a fine up to a maximum of \$500 dollars.

What should you do when driving through Work Zones?

Signing, traffic control devices, roadway markings, flaggers, and law enforcement officers are used to protect highway workers and to direct drivers safely through work zones or along carefully marked detours.

As a driver you should learn and abide by the following safety tips for driving in work zones:

- **Slow down and pay full attention to the driving situation!**
- **Follow the instructions** on the road work zone warning signs and those given by flaggers.
- **Avoid complacency.** Don't become oblivious to work zone signs when the work is long term or widespread.
- **Be aware** that traffic patterns in work zones can change daily including lane shifts or alternating lane closures.
- **Do NOT change lanes or pass in work zones.**
- **Use extreme caution** when driving through a work zone at night whether workers are present or not.
- **Calm down.** Work zones aren't there to personally inconvenience you. They're there to improve the roads for everyone.
- **Watch the traffic** around you, and be prepared to react to what the traffic is doing. Check the taillights/brake lights of vehicles ahead of you for indications of what is happening on the road ahead.
- **Merge as soon as possible.** Motorists can help maintain traffic flow and posted speeds by moving to the appropriate lane at first notice of an approaching work zone.
- **Slow down** when the signs say to. A car traveling 60 M.P.H. travels 88 feet per second. If you see a sign that says "Road Work 1500 Feet", you'll be in that construction zone in 17 seconds!
- **Obey the posted speed limits.** Workers could be present just a few feet away.
- **Adjust your lane position** away from the side workers and equipment when possible.
- **Keep a safe distance** between your vehicle and traffic barriers, trucks, construction equipment and workers. **Don't tailgate!**
- Normal driving conditions do NOT exist in and around work zones. **Anticipate events** and be ready to respond quickly.
- Some work zones – like line painting, road patching and mowing – are mobile. Just because you don't see the

workers immediately after you see the warning signs doesn't mean they're not out there. Observe the posted signs until you see the one that says "End Road Work".

- **Use total concentration** when driving through work zones. Pay attention to your surroundings. This is not the time to use the cellular phone, change the radio station, read the paper, apply make-up, shave or fill out the expense report.
- **Leave braking room** between you and the car in front of you.
- **Avoid road work zones** altogether by using alternate routes, when you can.
- **Expect delays;** plan for them and leave early to reach your destination on time.

*One of the best safety precautions you can do to protect your life and the lives of your passengers is **ALWAYS WEAR YOUR SEAT BELT.***

Some Final Safety Reminders To Think About:

The color orange is a signal to motorists that a work zone is near. When you see orange, use common sense, caution and concentration as you drive through these areas.

Everyone has a right to a safe workplace. The roads are a construction or maintenance worker's job. One careless mistake by a motorist and a worker could be killed or injured. So could the motorist.

Don't expect the road workers to see you coming. They may be concentrating more on work than on the traffic.

The lives of highway construction workers depend on drivers like you obeying the posted speed limits in work zones.

Remember, the color orange marks a work zone and means slow down!

SEE ORANGE, NOT RED

Work zones are no place for impatience or aggressive driving. After all, they're there to make the roads better and safer for you. The extra seconds or minutes it takes to get through a work zone are a small price to pay for years of safer driving.

For more information on Work Zone Safety visit these websites:

<http://safety.fhwa.dot.gov>

Accidents Don't Just Happen, They Are Caused

The Highway Transportation system is composed of three major elements:

- the driver,
- the vehicle, and
- the road.

In most cases where accidents occur, the cause can be attributed to one or more of these elements. *The majority of accidents relate directly to the driver.* A good driver takes interest and pride in the care and operation of his/her vehicle. The driver knows and observes all traffic laws and respects the rights and safety of others. As a result, such drivers have a much better chance of never becoming involved in a serious traffic accident.

The poor or careless driver all too often neither cares for the vehicle he/she drives, seldom observes traffic laws and has little respect for the rights and safety of others.

As a result of poor driving habits there are approximately 160,000 accidents reported to the Department of Safety annually.

Be In Shape To Drive

Driving safely is not always easy. In fact, it is one of the most complex things that people do. It also is one of the few things we do regularly that can injure or kill us. It is worth the effort to be a careful driver.

Being a safe driver takes a lot of skill and judgment. This task is even more difficult when you are just learning to drive. Driving can easily take every ability you have. If anything happens so you are not up to your ability, you may not be a safe driver. Your ability to be a safe driver depends on being able to see clearly, not being overly tired, not driving while on drugs, being generally healthy and being emotionally fit to drive. In other words, being in "shape" to drive safely.

Vision

Good vision is a must for safe driving. You drive based on what you see. If you cannot see clearly, you will have trouble identifying traffic and road conditions, spotting potential trouble or reacting in a timely manner.

Vision is so important that Tennessee requires that you pass a vision test before you get a driver license. This test measures that you have at least 20/40 vision in at least one eye, with or without corrective lenses.

Other Important Aspects of Vision Are:

- **Side Vision** — You need to see "out the corner of your eye." This lets you spot vehicles and other potential trouble on either side of you while you look ahead.

Because you cannot focus on things to the side, you also must use your side mirrors and glance to the side if necessary.

- **Judging Distances and Speeds** — Even if you can see clearly, you still may not be able to judge distances or speeds very well. In fact you are not alone, many people have problems judging distances and speeds. It takes a lot practice to be able to judge both. It is especially important in knowing how far you are from other vehicles and judging safe gaps when merging and when passing on two-lane roads, or when judging the speed of a train before crossing tracks safely.
- **Night Vision** — Many people who can see clearly in the daytime have trouble seeing at night. It is more difficult for everyone to see at night than in the daytime. Some drivers have problems with glare while driving at night, especially with the glare of oncoming headlights. If you have problems seeing at night, don't drive more than is necessary and be very careful when you do.

Because seeing well is so important to safe driving, you should have your eyes checked every year or two by an eye specialist. You may never know you have poor vision unless your eyes are tested.

If you need to wear glasses or contact lenses for driving, remember to:

- Always wear them when you drive, even if it is only to run down to the corner. If your driver's license says you must wear corrective lenses, you do not and you happen to be stopped, you could get a ticket.
- Try to keep an extra pair of glasses in your vehicle. If your regular glasses are broken or lost, you can use the spare pair to drive safely. This also can be helpful if you do not wear glasses all the time as it is easy to misplace them.
- Avoid using dark glasses or tinted contact lenses at night, even if you think they help with glare. The problem is that they cut down the light that you need to see clearly.

Hearing

Hearing can be helpful to safe driving. The sound of horns, a siren or screeching tires can warn you of danger. Hearing problems, like bad eyesight, can come on so slowly that you do not notice it. Drivers who know they are deaf or have hearing problems can adjust and be safe drivers. These drivers learn to rely more on their vision and tend to stay more alert. Studies have shown that the driving records of hearing-impaired drivers are just as good as those drivers with good hearing.

Fatigue

You cannot drive as safely when you are tired as when you are rested. You do not see as well, nor are you as alert. It takes you more time to make decisions and you do not always make good decisions. You can be more irritable and can get upset more easily. When you are tired you could fall asleep behind the wheel and crash, injuring or killing yourself or others.

There are things you can do to help from getting tired on a long trip.

- Try to get a normal night's sleep before you leave.
- Do not leave on a trip if you are already tired. Plan your trips so you can leave when you are rested.
- Do not take any medicine that can make you drowsy.
- Eat lightly. Do not eat a large meal before you leave. Some people get sleepy after they eat a big meal.
- Take breaks. Stop every hour or so or when you need to. Walk around, get some fresh air and have some coffee, soda or juice. The few minutes spent on a rest break can save your life. Plan for plenty of time to complete your trip safely.
- Try not to drive late at night when you are normally asleep. Your body thinks it is time to go to sleep and will try to do so.
- Never drive if you are sleepy. It is better to stop and sleep for a few hours than to take a chance you can stay awake. If possible switch driving tasks with another driver so you can sleep while they drive.

Health

Many health problems can affect your driving — a bad cold, infection or virus. Even little problems like a stiff neck, a cough or a sore leg can affect your driving. If you are not feeling well and need to go somewhere, let someone else drive.

Some conditions can be very dangerous:

- **Epilepsy** — So long as it is under medical control, epilepsy generally is not dangerous. In Tennessee, you may drive if you are under the care of a doctor and have not had a seizure for 1 year.
- **Diabetes** — Diabetics who take insulin should not drive when there is any chance of an insulin reaction, blackout, convulsion or shock. Such a situation could result from skipping a meal or snack or from taking the wrong amount of insulin. It also might be a good idea to have someone else drive for you during times when your doctor is adjusting your insulin dosage. If you have diabetes you also should have your eyes checked regularly for possible night blindness or other vision problems.
- **Heart Condition** — People with heart diseases, high blood pressure or circulation problems or those in danger of a blackout, fainting or a heart attack should

not get behind the wheel. If you are being treated by a doctor for a heart condition, ask if the condition could affect your driving safely.

Emotions

Emotions can have a great affect on your driving safely. You may not be able to drive well if you are overly worried, excited, afraid, angry or depressed.

- If you are angry or excited, give yourself time to cool off. If necessary take a short walk, but stay off the road until you have calmed down.
- If you are worried, down or are upset about something, try to keep your mind on your driving. Some find listening to the radio helps.
- If you are impatient, give yourself extra time for your driving trip. Leave a few minutes early. If you have plenty of time, you may not tend to speed or do other things that can get you a traffic ticket or cause a crash. Don't be impatient to wait for a train to cross in front of you. Driving around lowered gates or trying to beat the train can be fatal.

Warning! When It's Hot Outside, Do Not Leave Children Unattended

On a hot summer day, the interior of a car can get dangerously hot. One study found that with the windows up and the temperature outside at 94 degrees, the inside of a car could be 122 degrees in just half an hour, or 132 degrees after an hour.

An adult or child can develop potentially fatal heat-related health problems inside a parked vehicle when outside temperatures reach 85 degrees. Toddlers and infants are at particular risk because their bodies sweat less, and because unlike most adults, they are unable to get out of a vehicle when they begin to overheat.

Prevent a needless tragedy, and make sure no one leaves small children in a hot vehicle unattended.

Ignition (starter) Interlock System

Today's vehicles are equipped with ignition inlock systems, that, when used properly, will prevent the theft of an automobile and vehicle rollaway. The U.S. Department of Transportation has passed standards for these systems.

USDOT amended the standard for motor vehicle theft protection and vehicle rollaway, specifically those driving or riding in vehicles with automatic transmissions. This rule provided for greater flexibility in designing key-locking and transmission shift locking systems. It permits key removal only when the vehicle's transmission is in the "Park" position.

Drivers in an emergency situation on the highway may attempt to turn off the vehicle while it is still in motion, believing they will bring the vehicle to a stop. The basic rule the driver must follow when operating a vehicle with a steering wheel interlock system is: **never turn the ignition to the lock position while the vehicle is in motion.** Our steering will lock as you turn, and you'll lose control of the vehicle.

HELPING SOMEONE LEARN TO DRIVE

13

If you are trying to teach someone else how to drive, the most important thing you can do is to **drive safely yourself**. Though it sounds trite, it is true. Your friend or family member is now watching more carefully than you can ever dream. How do we know? Examiners quite often hear, “Well, that’s how my dad does it.” Sometimes the young driver is saying this to defend such things as “rolling stops.” Luckily, it is also often said with pride, when the applicant is giving a parent credit for their safe driving habits.

A second helpful thing you can do is to **talk out loud while you are driving**. Rather than overload the new driver with information and advice while he or she is also trying to simply learn the mechanics of driving, take advantage of teaching opportunities while you are behind the wheel. These are truly “teachable moments.” For example, you can:

- Point out tricky road signs, and ask what they mean.
- When a light turns yellow, talk about how you knew whether it was safe to stop, or safer to continue through the intersection.
- Ask them questions about the traffic behind you or beside you — make them aware that you have to pay attention to traffic all around you, not just in front of you.
- Show them the “two-second” rule, discussed in Chapter Ten.

Once you start doing this, you’ll be surprised at all of the wisdom you already have. You may also be surprised when it opens the door for your pupil to offer friendly criticism of your own habits! Since most of us have room for improvement, you will, hopefully, be able to accept with humor any good criticism they have.

Which Comes First, the Book or the Road?

You **both** will find it helpful to review this handbook, and any other materials you can find before actually letting the new driver get behind the wheel. People under age 18 must have either a learner permit or driver education before they can be road tested for a license. Both of these experiences involve “book learning” before getting on the road. This is a good principle for people of any age learning to drive.

One section of the handbook you could find helpful is the discussion in Chapter Three regarding things an examiner will be observing. These contain good cues for things you in your role as a teacher will want to observe.

Practice, Practice, Practice!

Nothing substitutes for actual experience on the road. You will want to have your first lessons concentrate on simply gaining control of the vehicle. Later lessons can build on this, getting increasingly more challenging. Here is one approach you might follow:

Phase One: Have the new driver practice controlling the

car itself. Find someplace safe off the road (such as an empty parking lot) to practice basic skills:

- Backing the car
- Pulling forward
- Right turns
- Left turns
- Staying within an imaginary lane

Phase Two: Take the driver to a quiet residential area and let your new driver practice not only the above skills, but add:

- Intersections
- Keeping space around the car
- Easy lane changes

Phase Three: After you are satisfied that the basic controls are fairly well mastered, you are now ready to take the new driver into heavier traffic. Again, you will practice all of the above, and add:

- Hill parking
- Parallel parking
- U-turn

Phase Four: When you have confidence the new driver can handle greater challenges, you should guide him or her to practice:

- At night
- On multi-lane highways
- In various weather conditions

Two Tools to Consider

Driving Log: Safety researchers have found that the more supervised miles new drivers have before driving on their own, the fewer accidents they have. This seems like common sense, but is there a magic number of miles you should ride with your student? The University of Michigan’s Transportation Research Institute recommends 3,000 miles.

Each new driver is different, of course, and yours may not need 3,000 miles to be a confident, competent driver. Nevertheless, this could be your initial goal, which you could later modify. And to keep track of it, we suggest getting a simple spiral ring notebook to keep in the glove compartment. Make five headings:

OUR DRIVING LOG				
Date	Weather/ Time of Day	Starting Mileage	Ending Mileage	Comments

Contracts: As it gets closer to the time when your new driver will be applying for a driver license, some parents find it helpful to sit down and spell out just what they expect when they turn the car over to their child. For example, why wait until they have loaded up the car with laughing, distracting friends to develop a rule on how many people you feel okay about being in the car with them? It is up to you whether you would want to have this written and signed, or just discussed as a family, but areas you could consider covering in your agreement include:

- Where they may drive
- What hours of the day they may drive
- How many people can be in the car with them
- The condition the car should be returned (gas in tank, clean), and consequences if neglected
- Who pays for the car's gas and maintenance
- What they will contribute toward their insurance
- Responsibility for parking tickets
- Consequences for moving violations, including speeding

Helping Newcomers

If you have shouldered the task of teaching someone whose first language is not English, two areas in particular deserve special attention. First, make every effort to ensure that the driver studies the material on traffic signs and signals, and help him or her to “translate” these while you are out driving together. Second, put yourself in the role of an examiner, and let the driver practice following simple instructions in English (for example, “Turn left,” “Slow down,” etc.).

A Special Word to Parents

Remember — a driver license examiner spends less than 30 minutes driving with your child. Just by virtue of the fact that it is an examination, this is a special trip. Most applicants will perform at their very best level during the exam. Just because they perform at the passing level then does not necessarily mean they always use safe driving procedures.

The examiner can evaluate a driver's competence, but the responsibility of educating and teaching that child to drive rests with the parents. This means that it is wise to continue to monitor your child's driving performance even after they have been issued a driver license.

WHERE TO RENEW YOUR LICENSE?

You may renew your license at any driver license office. There is a driver license station serving each county. For those not listed, you may check our Website, www.state.tn.us/safety/, contact one of the stations below, or call: **(615) 741-3954 [TDD - Telecommunications Device for the Deaf (615) 532 -2281]**

KEY DRIVER LICENSE STATIONS

COUNTY	ADDRESS	PHONE	HOURS*
Anderson	1976 Oak Ridge Highway, #14 Clinton, TN 37716	(865) 457-3958	Tues thru Fri 7:30-6:00
Blount	318 Home Avenue Maryville, TN 37801	(865) 981-2359	Tues thru Fri 7:30-6:00
Bradley	409 S. Ocoee Street Cleveland, TN 37311	(423) 478-0346	Tues thru Fri 7:30-6:00
Carter	419 West Elk Avenue, Suite 3 Elizabethton, TN 37643	(423) 547-5886	Tues, Wed, & Fri 8:00-6:30
Coffee	945 Jack Welch Drive Manchester, TN 37355	(931) 723-5066	Tues thru Fri 7:30-6:00
Cumberland	96 Dooley Street Crossville, TN 38555	(931) 484-1360	Wed thru Fri 7:30-6:00
Davidson	6604 Centennial Blvd Nashville, TN 37209	(615) 741-4560	Mon thru Fri 8:30-5:00
